* Returns not complete.

UNITED KINGDOM. The shipbuilding output of the United Kingdom during 1920 was the highest ever reached in the industry, the production being 618 vessels with an aggregate gross tonnage of 2,055,624. The 618 merchant vessels included 556 steamers of a total of 1,953,014 tons, 25 motor vessels of a total of 86,940 tons, and 37 sailing vessels and barges of a total of 15,670 tons. All these vessels were built of steel, with the exception of 3 wood vessels of a total of 660 tons and 7 vessels of reinforced concrete of a total of 3794 tons. Only one sailing vessel was launched during the year, viz., a yacht of 123 tons. A considerable proportion of the

were for Norwegian owners, 201,662 tons for French owners and 131,589 tons for Italian owners, and most of these countries as stated later also made useful additions to their merchant fleets from their own yards.

The greater part of the merchant tonnage launched in the United Kingdom was, as usual, comprised in vessels ranging from 5000 tons to 10,000 tons, the total number of ships included between these limits amounting to 168. Fifteen vessels of over 10,000 tons were, however, launched during the year, and three of these were of over 200,000 tons. These vessels were the *Empress of Canada* (22,000 tons), the *Scythia*

(21,500 tons), and the *Guilio Cesare* (21,000 tons). The average tonnage of the vessels launched amounted to 3508, but as vessels of less than 500 tons were excluded, the average tonnage would be 4387. The latter figure was larger than that for 1919, but smaller than those for the two previous years, the figures for 1919, 1918, and 1917 being 4006 tons, 4593 tons and 4933 tons, respectively. Of the vessels launched, 79, with a total tonnage of 638,557, were to be fitted with steam turbines, most of which was to be geared, although two vessels were provided with combined turbines and reciprocating engines. Twenty-five motor vessels, with a total of 86,940 tons were launched during the year, 11 of these ships being of 5000 tons and upwards; the three largest motor ships launched were each of about 9500 tons.

NUMBER AND TONNAGE OF MERCHANT VESSELS LAUNCHED IN THE PRINCIPAL SHIPBUILDING DISTRICTS IN THE UNITED KINGDOM DURING THE THREE YEARS 1918-1920

* Includes a sailing ship of 3,845 tons.

The accompanying table shows the distribution of shipbuilding work among the various districts of the United Kingdom for the three years, and from this it will be seen that the Clyde well maintains its position as the premier shipbuilding district of the country. From Glasgow and Greenock together 180 vessels with a total gross tonnage of 680,466 were launched, the tonnage being about one-third of the total for the whole of the United Kingdom. Most of the districts, as indicated in the table, show notable increases in work in comparison with that of the previous year, the only exceptions being Belfast and Londonderry in Ireland, and the Hartlepoons. In Belfast, the work of reconditioning vessels probably had a considerable effect upon the production of new tonnage.

JAPAN. Japan ranked third among the shipbuilding nations in 1920, having launched 140 steamers with an aggregate gross tonnage of 456,042. This tonnage was 155,241 less than that launched in 1919, and 33,282 tons less than the figure for the previous year. In spite of the reduction, however, the 1920 tonnage formed more than a third of the total launched outside of the United Kingdom and the United States, and was almost equal to the total tonnage launched in Japan during the 10 pre-war years 1904 to 1913 inclusive. Of the Japanese vessels launched in 1920, 30 were between 5000 tons and 6000 tons each, while 21 came between 6000 tons and 10,000 tons. The three largest vessels were an

oil tanker of 8000 tons and two steamers of 9695 tons each.

BRITISH DOMINIONS. Shipbuilding in the British Dominions showed a considerable decrease in comparison with the previous year, the 1920 tonnage launched being about 155,000 less than the figure for 1919. The Canadian tonnage launched amounted to 159,551, or 112,000 tons less than that for the previous year, while of the remaining tonnage launched in the Dominions, more than half was produced in the Hong Kong district, where two vessels, each of about 5100 tons, were launched. The Canadian tonnage included 13 steel steamers, making 29,087 tons together, launched on the Great Lakes, while on the coast and on the St. Lawrence, 17 steel steamers of between 5000 tons and 6000 tons were launched.

HOLLAND. The Dutch yards launched 99 vessels, totalling 183,149 tons, in 1920. The latter figure, it will be noticed, was 46,000 tons higher than that for the previous year and constituted, in fact, a record for the country. The figures, as usual, do not include vessels intended exclusively for river navigation, but they comprise seven vessels to be fitted with internal-combustion engines and three to be propelled by steam turbines. The latter vessels have a total tonnage of 19,000, and of the internal-combustion engined ships, two have tonnages of 5370 and 5155, respectively. The largest vessels launched in 1920 were two of about 8100 tons each, but seven other ships had tonnages between 5000 and 7500 each.

ITALY. Italy was the only other country which launched more than 100,000 tons of shipping in 1920, the total production of that country, viz., 133,190 tons, being 50,477 tons higher than the corresponding figure for 1919. The figures for Italy included Trieste, the production of this port having amounted to 29,121 tons. Of the steamers launched nine were between 5000 tons and 5800 tons each, and another vessel had a tonnage of 6500. Italy's most notable production was, however, the *Caracciolo*, of about 25,000 tons. This was said to be the largest vessel launched in 1920 in any country of the world, but it should be mentioned that it was launched as a warship and is now being converted for merchant service. Including the last-mentioned ship, eight vessels launched in Italy in 1920 were to be propelled by steam turbines, the total tonnage of these vessels amounting to 63,208.

FRANCE AND SPAIN. The French output for 1920, viz. 93,449 tons, exceeded that for the previous year by 60,786 tons, but these figures were, however, considerably lower than those for the pre-war period. The vessels launched in France in 1920 included six steamers of between 5000 tons and 6700 tons, and one of about 9500 tons. Spanish shipbuilding, on the other hand, declined during the year, the tonnage launched in 1920 being 6659 less than that for 1919. The largest Spanish steamer launched was the *Alfonso XIII*, a turbine vessel of 10,137 tons, but the 1920 figures included five steamers with tonnages between 5000 and 6000.

DENMARK, NORWAY AND SWEDEN. The Scandinavian countries, between them, launched 163,347 tons of merchant shipping in 1920, the output being 17,032 tons more than that in 1919. Denmark and Sweden both showed increases in tonnages launched, but in the former country amounting to 22,903 tons, while the Swedish in-

crease was 12,852 tons. In the case of Norway, on the other hand, the 1920 production was less by 18,723 tons than that for the previous year. As already mentioned, a considerable tonnage was built in the United Kingdom for Norwegian owners. The total figure for the Scandinavian countries included four vessels, of between 5000 tons and 5600 tons each, launched in Sweden, and three motor vessels of between 5900 tons and 7150 tons launched in Denmark. The total tonnage of vessels fitted with internal-combustion engines launched in Denmark was the largest for any foreign country, with the exception of the United States, and amounted to 24,352 tons in the aggregate.

At the end of the year there was building in France 397,000 tons, an increase from 293,000 tons on October 1, and in Holland a total of 450,000 tons, compared with 424,000 tons in the previous quarter. The gain of 130,000 tons by these two countries, however, was offset somewhat by declines elsewhere. Italy's share declined only 2000 tons from 365,000 to 363,000; but the aggregate building in the British Dominions was reduced from 213,000 to 186,000 tons and other nations also lost ground in the final quarter of 1920.

UNITED STATES VESSELS BUILT AND DOCUMENTED IN 1920. The Bureau of Navigation of the Department of Commerce reported that during the calendar year 1920, 1758 merchant vessels of 2,831,343 gross tons were built in American shipyards. American shipbuilders also built 25 vessels of 29,382 gross tons for foreign owners, making a total output of 1783 vessels of 2,860,725 gross tons for the 12 months. During the calendar year 1919 the corresponding output was 2338 vessels of 4,213,891 gross tons for American and 25 vessels of 44,250 gross tons for foreign owners, a total of 2363 vessels of 4,258,141 gross tons. Of the 1920 output, 617 vessels of 2,557,032 gross tons were built of steel, a decrease of 299 vessels and 1,012,792 gross tons compared with 1919.

The following details of vessels built and officially numbered in the United States in 1920 were reported by the Bureau of Navigation, Department of Commerce:

AMERICAN SHIPBUILDING. Considering American shipbuilding in more detail, it must be realized that since 1914 it had advanced in rank from the 58th industry in the United States to 15th.

In 1914 the total value of the output of the in-

dustries of iron and steel and their products was \$3,223,144,000, of which shipbuilding was approximately 2.75 per cent. The estimated value of the annual output of the iron and steel industries in 1920 was \$8,600,000,000, of which shipbuilding was approximately 15 per cent.

In 1914 shipbuilding, with a total value of output of \$88,682,000, ranked 58th among the industries of the United States. The construction under way in 1920 placed shipbuilding in about 15th position, surpassing such manufacturing industries as leather, furniture, chemicals, paper and wood pulp, agricultural implements, sugar and silk.

In 1920 the shipbuilding industry was again being placed on a basis of private construction and operation after war conditions. In the spring of 1919 shipyards were again permitted to accept orders for private account, and by July 1, 1919, contracts had been let for over 100,000 gross tons of steel ships. By July 1, 1920, the tonnage under construction or contracted for for private account had increased to approximately 1,700,000 gross tons.

The steel merchant tonnage on Dec. 31, 1920, under construction for private account (approximately 1,500,000 gross tons) was over six times the average pre-war output of steel merchant vessels (235,000 gross tons annually), and was approximately three and one-half times the greatest annual output prior to the war (450,017 gross tons of steel ships in 1908).

Accordingly in 1920 there was a condition not before realized since the beginning of the war. On Sept. 1, 1920, there were under construction in the United States 2,463,314 gross tons of steel merchant vessels. Of these, 1,439,498 gross tons were for private account and 1,024,816 gross tons were for the United States Shipping Board. On Sept. 15, 1920, there were under construction for private account steel vessels aggregating 1,449,859 gross tons. This was practically the same as the private account tonnage under construction on July 1, 1920, new orders having replaced the tonnage delivered. The figures for December 31st are given later in this article.

An examination of statistics on shipbuilding

for the years 1900 to 1915 inclusive will show that the total tonnage of steel merchant vessels under construction at the beginning of each fiscal year was practically the same as that turned out during the latter year.

The tonnage of the American merchant marine more than doubled during the six years 1914-20, and the 1920 tonnage was over 16,000,000 gross tons, slightly less than one-third the total world tonnage. The tonnage under construction at the end of 1920 would bring this total up to approximately 19,000,000 gross tons by July 1, 1921.

Assuming the average life of a ship to be 20 years, there would be required annually for the upkeep only of the American merchant fleet 5 per cent of this tonnage, or approximately 950,000 gross tons. This amount is an understatement as much of the American merchant in 1920 was made up of wooden ships and others rapidly obsolescent, so that sanguine authorities looked for a future annual replacement requirement of some 1,500,000 tons for at least several years.

MOTOR SHIPS. Lloyd's Register reported that during 1920 there were launched in the world 190,000 gross tons of vessels fitted with internal combustion engines. At the end of the year there were about 170 vessels of this type with an aggregate gross tonnage of about 495,000 tons under construction in various parts of the world. Of those 170 motor ships building between 40 and 50 were on order in the United Kingdom, while the majority of the others were under construction in the Scandinavian countries and in Holland and Germany. It was anticipated that fully half of the 170 vessels would be put in commission during the year 1921, adding from 700,000 to 800,000 tons to the motor ship fleets of the world. During the year 1920 there were 24 ocean-going motorships put into commission—the largest number ever completed in a previous 12-month period.

The largest motor ship completed in 1920 was the *Zoppot*, owned by a Danzig firm. She was an oil tank vessel carrying 15,000 tons, but the two 14,000-ton ships for the Glen Line, the *Glenapp* and the *Glenagle*, were perhaps more interesting ships and were equipped with machinery of much higher power. Four more vessels similar in every respect to the *Glenagle* were to be completed during the course of the year 1921. Among the more important developments in motor shipping was the construction of passenger liners for various companies. Three of these were to be commissioned for the British India Steam Navigation Company, Ltd., before the end of 1921, the first being the *Magvana*. In addition there were to be three larger and faster vessels for an Italian firm and one or two more for Scandinavian owners.

See INTERNAL COMBUSTION ENGINES.

TANKERS. In the construction of tankers of 1000 gross tons and over during 1920 the United States led all the nations. Out of a total of 640,000 gross tons launched from all countries nearly 90 per cent was in the United States. The division of the tanker tonnage was as follows for 1920, figures in gross tons:

United States	567,000
United Kingdom	65,400
Other countries	8,000
World total	640,400

At the end of 1920 the tankers under construction in the world aggregated 1,169,000 tons, of which 637,100 tons were building in American ship-yards, 422,500 in the United Kingdom, and 109,400 in other countries. This compared with a total of 795,000 tons building at the end of

September of which 545,000 were building in the United States, 232,000 in the United Kingdom, and 18,000 in other countries.

This development in 1920 was of special interest for bulk-oil carriers were in small demand in the spring of 1919, and the time charter rate fell to 20s. a deadweight ton a month for a year, or only half the rate for cargo tonnage free from government restrictions. In less than a year this rate had advanced to 60s., and in the early part of 1920 to 80s., a rise almost unprecedented in the history of shipping. Accordingly when the demand for tankers became generally known there was a rush to build oil carriers, and the books of American shipyards were crowded with new business. Only 74,000 gross tons of tankers were building in the United States for private account on Oct. 1, 1919; nine months later 815,000 tons were under construction. While oil rates were easier at the end of 1920, throughout the year the tanker situation loomed up bright amid the many uncertainties of shipping.

A typical instance of a motor ship tanker launched from the Tacoma plant of the Todd Shipyards Corporation was the 6500 deadweight-ton motorship *Kennicott* for the Alaska Steamship Company. The *Kennicott* went down the ways in 50 working days after laying of the keel.

She was 360 feet in length, and 9 feet 6 inches beam, equipped with two Diesel type engines, each developing 1200 indicated horse power. This tanker was built under the provisions of Section 23, of the Merchant Marine Act of 1920, which permits the reinvestment of taxes exempt in new construction as discussed under SHIPPING (q.v.).

AMERICAN SHIPBUILDING YARDS. The construction in 1920 was distributed between a number of yards. The Hog Island yard led in the production of tonnage, with the Newark Bay yard of the Submarine Boat Corporation second, just ahead of the Camden plant of the New York Shipbuilding Corporation, which took third rank. The Bethlehem Shipbuilding Corporation, with its Fore River, Harlan, Moore, Sparrows Point, Potrero, and Alameda plants, led in production all other organizations with more than one yard. The six yards mentioned turned out 369,350 gross tons of merchant ships for government and private interests. At the five yards of the American Shipbuilding Company, which had contracts from the Emergency Fleet Corporation to build more than a hundred ships of the Great Lakes types, there were launched 255,900 gross tons, representing 63 steel ships.

Following is a list of the 10 leading plants in the point of production:

	No. of ships	Gross tons	Total H. P.
Hog Island	46	399,950	115,000
American S. B. Co.	63	255,900	6,600
New York S. B. Corp. . .	13	148,800	113,450
Submarine boat	42	148,890	90,000
Sun S. B. Co.	14	92,800	42,000
Bethlehem (Alameda) S. B. Corp.	13	131,400	36,400
Merchant (Harriman) S. B. Corp.	16	92,160	40,000
Federal S. B. Co.	18	78,750	32,900
Western Pipe & Steel Co. .	8	70,400	22,400
Bethlehem (Sparrows Pt) S. B. Corp.	7	75,840	20,400

Naturally a number of ships were completed during the year, but on Dec. 1, 1920, the Sparrows Point yard of the Bethlehem Shipbuilding

Corporation was engaged upon more tonnage than any other shipyard in the United States. Here were being built four 535-foot passenger liners for the Shipping Board, as well as a number of large oil tankers with large carrying capacities.

The first 10 yards in the order of tonnage under construction on Dec. 1, 1920, were:

	No. of ships	Gross tons	Total H. P.
Bethlehem (Sparrows P't)			
S. B. Corp.	13	170,200	91,500
New York S. B. Corp.	13	121,318	86,900
Bethlehem (Alameda) S. B. Corp.	10	118,000	28,890
Bethlehem (Fore River) S. B. Corp.	7	99,060	24,800
Federal S. B. Corp.	16	74,750	25,800
Morse S. B. Corp.	9	67,300	33,400
Newport News D. D. & S. B. Co.	5	62,100	26,600
Northwest Steel Co.	7	56,000	22,400
Hog Island	7	56,000	17,500
G. M. Standifer Const. Co.	4	48,000	12,000
Chickasaw S. B. Co.	8	45,488	24,800

By the end of 1920 there was a total of 445 steel ships, aggregating 1,742,599 gross tons, under construction in American shipyards, for both private and government account, according to the bulletin of the American Bureau of Shipping. The Shipping Board's fleet under construction had dwindled to 65, while a grand total of 380 was on the ways for private interests.

The bulk of the shipbuilding being produced for private lines was on the Atlantic. In all 189 ships, of 772,929 gross tons, were being built in Atlantic shipyards; 43, of 302,645 tons, on the Pacific; 31, of 77,319 tons on the Gulf; six, of 11,916 tons on the Great Lakes, and 111, of 70,375, in the interior. The Shipping Board tonnage was distributed geographically as follows: Atlantic, 36, of 318,980 tons; Pacific, 19, of 127,006 tons; Gulf, nine, of 58,725 tons; Great Lakes, one ship of 2677 tons.

The range in gross tons showed that the greatest number of ships under way at the end of the year were river craft. The following table shows the size of the craft then building:

Size Range	No.	Gross Tons
under 500	95	32,667
501 to 1000	116	86,041
1001 to 2000	12	17,380
2001 to 3000	8	22,346
4001 to 4000	16	56,218
4001 to 5000	6	27,668
5001 to 6000	38	215,518
6001 to 7000	51	341,063
7001 to 8000	42	312,387
8001 to 9000	28	201,549
9001 to 10000	9	88,680
10001 to 11000	22	231,280
11001 to 12000
12001 to 13000
13001 to 14000	8	108,000
Total	445	1,742,599

Late in the year the American Bureau of Shipping (see 1916 YEAR BOOK, article SHIPBUILDING) announced that it had under advisement a proposal to extend its classification facilities to the vast fleet of American craft engaged in commerce on rivers and in harbors. This would bring under classification towboats, steamboats, barges of all descriptions, car floats, and canal boats. It was believed that this would eliminate certain preventable casualties and would be reflected in consequent lowering of insurance rates.

Following are tables showing the steel tonnage building at the end of the year for private interests and for the Shipping Board:

FOR PRIVATE ACCOUNT		
Type and fuel	No.	Gross tons
Cargo—Coal	17	9,987
Oil	57	222,690
Coal and oil	8	46,544
Total	220	363,056
Tanker—Oil	115	844,689
Coal and oil	1	4,000
Non-prop.	44	23,439
Total	160	872,128
Grand Total	380	1,235,184

FOR SHIPPING BOARD		
Type and fuel	No.	Gross tons
Cargo—Oil	9	60,634
Coal and oil	24	151,561
Total	33	212,195
Tanker—Oil	8	55,000
Transport—Oil	4	30,220
Passenger and cargo—Oil	18	189,000
Coal and oil	2	21,000
Total	32	210,000
Grand Total	65	507,415

See SHIPPING, UNITED STATES.

SHIPPING. In the aftermath of the World War shipping inevitably figured not only on account of the vast destruction by German submarines and extraordinary efforts at replacement and to provide new facilities for transport, but in the general attempts at restoring commercial activity on a peace basis in view of new and changing economic conditions. As will appear from the table on page 622 the world's steam tonnage in June, 1920, was some 20 per cent greater than on June 30, 1914, but at the later date the amount of available cargo was only about two-thirds what it was before the war. Operating costs had increased threefold over ante-bellum days, ranging all the way from wages to fuel, while, as was inevitable, with a surplus of tonnage and no increase in commerce, rates had declined from previous high levels to a point even lower than in the spring and early summer of 1914. Much of this decline occurred in 1920, particularly in the rates on such cargoes as coal, grain, cotton, and other bulk shipments that ordinarily form nearly two-thirds of the ocean freights. At the beginning of the year the freight rate on coal from Hampton Roads to France or Rotterdam was quoted about \$23 a ton, while before the end of 1920 it had reached the lowest level since 1914, \$4.75 a ton. Grain from Buenos Aires to the United Kingdom was being shipped at the end of the year 1920 for 47s. 6d. a ton, as compared with 225s. in February and 30s. in 1913. Piece-cargo rates, which were controlled by agreements between the liner companies, also broke during 1920, but not so sharply.

On the other hand there were increases during the year in oil and passenger rates, and from a limited demand for oil carriers in 1919, there was in 1920 active seeking after tankers and high prices were paid for both charters and for freight. This led to new construction and orders on a greater scale than for other types of craft. (See SHIPBUILDING.) One reason for the increased passenger fares were the higher operating costs analogous in part to those of a hotel on land, but notwithstanding this there was in the first part of the year active passenger business. Steerage

business increased during the year but fears were expressed that legislation to restrict immigration to the United States to be passed by Congress might interfere with this seriously.

The great revival in shipping represented heavy investments in marine transportation not only in the United States but throughout the world and the decline in ocean borne commerce due to world conditions naturally developed serious conditions. There were failures of companies that had been organized to purchase or build steamships at the high prices and by the end of 1920 there was little encouragement for an immediate improvement.

The accompanying table, condensed from Lloyd's Register of Shipping, shows the gross tonnage of the world's steamers, according to nationality, in June, 1914, 1919, and 1920, the returns covering vessels of 100 gross tons or over.

Country	June, 1914 Gross tons	Gross tons June, 1919	Gross tons June, 1920
United Kingdom	18,892,000	16,345,000	18,111,000
British Dominions	1,682,000	1,683,000	2,082,000
United States:			
Seagoing	2,027,000	9,773,000	12,406,000
Great Lakes	2,260,000	2,160,000	2,119,000
Austria-Hungary	1,052,000	713,000
Belgium	341,000	306,000	410,000
Brasil	268,000	493,000	475,000
Denmark	770,000	631,000	719,000
France	1,922,000	1,962,000	2,963,000
Germany	5,185,000	3,247,000	419,000
Greece	821,000	291,000	497,000
Italy	1,430,000	1,288,000	2,118,000
Japan	1,708,000	2,325,000	2,996,000
Netherlands	1,472,000	1,574,000	1,778,000
Norway	1,957,000	1,597,000	1,980,000
Spain	884,000	709,000	937,000
Sweden	1,015,000	917,000	996,000
Other countries	1,778,000	1,758,000	2,954,000
Total steam tonnage	45,404,000	47,897,000	53,905,000
Sail tonnage (net for 1914 and 1919) ..	3,686,000	3,022,000	3,409,000
Grand total	49,090,000	50,919,000	57,314,000

Under the heading "Other countries" for 1920 are included about 1,000,000 gross tons of former German ships, the allotment of which among the victorious nations had not been made when the table was compiled.

The world's increase in shipping during the year 1919-20 had been 6,400,000 gross tons, or double the increase in any previous year, and shipbuilding was proceeding in 1920 at double the pre-war rate. The increase in shipping since the outbreak of the war in 1914 was 8,224,000 gross tons, while the increase during the six years from 1908 to 1914 was 8,167,000 gross tons. The seaborne cargoes of the world in 1920 as already stated undoubtedly were less than before the war because normal production had not been resumed in most countries, reducing generally the volume of export cargoes. Furthermore, every nation which took part in the war incurred heavy debts which involve high taxes, lessening further its ability to import anything but necessities. Nevertheless, there was tonnage to move all available cargoes but the loss of passenger ships had not been made good. While American steam tonnage has increased by 10,400,000 gross tons since 1914, there was nearly 2,000,000 gross tons less for the rest of the world.

UNITED STATES SHIPPING. According to the Annual Report of the Commissioner of Navigation the year 1919-20 was one of maximum records in most branches of American shipping and shipbuilding not likely to be equaled for years to come. As officially summarized the following significant statements are made:

1. The total American registered, enrolled, and licensed tonnage on June 30, 1920, was 16,324,024 gross tons, three times the tonnage in 1914 of Germany, whose former place as the second maritime power the United States assumed.

2. The year's increase in American shipping was 3,416,724 gross tons, an annual increase larger than the whole world's increase during any year before 1914.

3. The American ships built and documented during the year 1919-20 aggregated 3,880,639 gross tons, an output comparable only to the world's pre-war record launching of 3,332,882 gross tons in 1913 and the British record of 3,808,056 gross tons under construction on June 30, 1920. At the end of December, 1919, American shipyards had built ships (including a small tonnage for foreign owners) at the rate of 4,258,-

141 gross tons per annum and at the end of March, 1920, American yards had built steel ships alone at the rate of 3,679,285 gross tons per annum. The peak of annual wooden-ship production, 1,021,020 gross tons, had been reached at the end of June, 1919, and declined to 297,864 gross tons during the fiscal year 1919-20.

4. American ships registered for foreign trade on June 30, 1920, aggregated 9,928,595 gross tons, nearly tenfold the tonnage so registered in 1914.

5. This registered tonnage during normal domestic conditions of trade, control, and production would suffice to carry about 60 per cent in value of the foreign trade of the United States and, in fact, during the years 1919-1920 carried 45 per cent in value of American exports and 30 per cent in value of imports, while in 1914 American ships carried only 10 per cent in value of exports and imports.

6. The increase during the year 1919-1920 in United States tonnage registered for foreign trade was 3,258,869 gross tons, or virtually 50 per cent, and was by itself more than the tonnage under any flag but the British (which amounted to 20,582,652 gross tons), slightly exceeding the total of 3,245,194 gross tons under the French flag, which ranked next to the American.

7. The clearances of American ships in foreign trade aggregated almost 29,000,000 net tons, or close to 52 per cent of the total clearances and double the percentage of 1914.

8. For the first time in a third of a century one-half of the officers and crews of American

ships in foreign trade were American citizens, born or naturalized.

The accompanying table also from the Report of the American Commissioners of Navigation shows at a glance the changes which had taken place year by year, beginning with the fiscal year ended June 30, 1914, in the gross tonnage of American shipping (the gross ton being 100 cubic feet of the entire closed-in spaces of the ship, including those occupied by engines, boilers, and bunker coal as well as those available for cargo or passengers):

June 30	Coasting Trade			
	Foreign trade	Great Lakes	Sea and river	Total
1914...	1,076,152	2,882,922	3,969,614	7,928,688
1915...	1,871,543	2,818,000	3,699,886	8,389,429
1916...	2,191,715	2,760,815	3,517,119	8,469,649
1917...	2,446,399	2,769,824	3,654,814	8,871,037
1918...	3,603,706	2,708,528	3,612,289	9,924,518
1919...	6,669,726	2,635,680	3,601,894	12,907,800
1920...	9,928,595	2,595,062	3,800,367	16,324,024

As accounting for the above increase of nearly 9,000,000 gross tons in the American shipping in the foreign trade, it may be said that the ship registry act of 1914 (See YEAR BOOK for 1914, article, SHIPBUILDING) transferred to American registry, American owned foreign built ships amounting to 752,652 gross tons, while the seized German ships registered on June 30, 1920, numbered 56 and amounted to 309,893 gross tons. In addition about 300,000 gross tons were then temporarily in military or naval service. The remainder came from building under war conditions.

In the calendar year 1920 according to the statistics of the Department of Commerce American vessels carried a larger proportion of the country's water-borne export trade as measured by value than during any previous year since the increase of the United States merchant marine. The total value of water-borne exports in 1920 was \$7,145,448,264, of which vessels under the American flag moved \$3,116,352,644, or more than 43 per cent. In 1919 out of an aggregate of \$6,951,358,746, American ships accounted for \$2,549,505,970, or about 36 per cent, and in the preceding year they transported \$965,629,697, or less than 20 per cent of a total of \$5,155,583,080. In the fiscal year 1914 American ships carried commodities valued at \$368,359,756, or 0.7 per cent of the total foreign trade, which was \$3,785,468,512.

This increased trade was at the expense of the British merchant marine whose activity in this field declined. In 1918 British bottoms moved American exports valued at \$2,195,823,050, or more than 42 per cent of the aggregate; in 1919, \$2,452,935,350, or approximately 35 per cent, and in 1920, \$2,587,876,023, or about 36 per cent. Norwegian shipping occupied third position during 1919 and 1920, but in the latter year its proportion fell to less than 8 per cent.

The record of clearances in export trade already referred to by the Commissioner of Navigation further reflected the gains by American shipping, which contributed in 1920 slightly more than half of the net tonnage so cleared. It is well worthy of record that American ships predominated in the trade with North and South America and supplied three-sevenths of the tonnage cleared to Asia. In the clearances to Europe, Oceania, and Africa foreign shipping re-

tained a commanding lead, although less marked than in some preceding years.

The accompanying table shows the value of American water-borne exports distributed according to the flags of the ships carrying them during the year 1920, with comparisons with 1919:

Carried in—	Years	
	1919	1920
American vessels.....	2,549,505,970	3,116,352,644
Foreign vessels—		
Belgian	102,986,289	76,869,551
British	2,452,935,350	2,587,876,023
Danish	140,606,725	71,841,461
Dutch	164,844,666	158,817,042

Oceania	386,157	585,227
Africa	388,680	722,948
Total	34,080,978	33,790,594

UNITED STATES SHIPPING BOARD. This department of the government was rather a storm centre during 1920 both as regards its policies and its administration. In its annual report for the fiscal year ended June 30, 1920, the Shipping Board stated that it had established 209 freight services to all parts of the world with the great fleet of merchant vessels produced by American shipyards. During this 12 months' period the shipbuilders had delivered to the United States government 1002 ships aggregating 5,694,567 dead-weight tons.

Largely as a result of the work of the Shipping Board the United States in 1920 occupied second place in the world's shipping, and on completion of the corporation programme it would probably have as much ocean-going tonnage as all the other countries combined, with the exception of Great Britain. On June 30, 1920, the entire sea-going American merchant marine of ships, over 750 dead-weight tons in capacity, represented 3404 vessels of 16,918,212 dead-weight tons, not including over 2,000,000 tons of shipping on the Great Lakes.

On June 30, 1920, the United States Shipping Board had a total of 209 established general cargo routes of which 202 were between United

States and foreign ports and between United States ports, and seven between foreign ports. These various berths afforded shippers 229 services.

A further subdivision shows that of the 202 general cargo berths there were 100 from North Atlantic, 27 from South Atlantic, 54 from Gulf and 21 from Pacific coast ports. Among these were many which were newly established.

The maintenance of the fleet cost the Shipping Board about \$70,000,000 annually in repairs.

For repairs to the ex-enemy vessels and reconditioning charges after their delivery to the United States Shipping Board, \$5,413,789.40 was expended.

Conclusions on the comparative merits of the various cargo carriers built by the Shipping Board were thus summed up in the light of several years' operating experience. The Hog Island type was found to be the most desirable for general service. The Submarine Boat Corporation type was well fitted for service in the Baltic and Scandinavian trade. Light draft lake-type vessels were admirable for the West Indies trade, particularly the south ports of Cuba. Larger lake-type vessels were well suited for various coast-wise services and in trade to northern ports of Cuba. Nine of the larger lake-type were employed in Oriental feeder service, this service calling at the smaller outports, collecting cargo and bringing it to the regular ports of call. Vessels of the 8800 dead weight class and also the 9500 dead weight were especially suitable for the cotton and grain trade on account of their size, but during the off cotton and grain season great difficulty existed in filling ships of this size on the same berth and maintaining the same schedule as would exist during the cotton and grain season. At such off season periods vessels of the Submarine Boat Corporation type and the Japanese constructed type, approximately 6400 dead weight, were considered more suitable as substitutions, while the larger ships were diverted to other services.

By June 20, 1919, the sales division of the Shipping Board had sold 426 ships, aggregating 2,195,440 dead weight tons, for a consideration of \$279,914,594.31, generally on a deferred payment plan. A summary of the sales follows:

New steel vessels:	No. vessels	Dead weight tons	Sales value
Cargo	131	820,761	\$182,643,398.70
Refrigerator	3	25,553	5,539,607.71
Frgh. & pass.	2	10,650	3,288,000.00
Passenger	2	8,610	2,250,000.00
Reconveyances (steel):			
Cargo	38	287,248	32,227,683.78
Tankers	37	385,592	50,552,290.68
Passenger	2	9,972	1,690,372.66
Reconstruction			
lakers (cargo) ...	27	100,201	4,642,104.12
Ex-Austrian (steel):			
Cargo	5	29,588	4,099,082.50
Ex-German (steel):			
Cargo	33	191,676	24,283,491.00
Passenger	4	20,402	750,000.00
Frgh. & pass.	1	2,620	300,000.00
Sailers	6	22,197	1,220,835.00
Tugs	1	21,000.00
Wood vessels:			
Cargo—			
New	34	150,576	7,095,352.21
Old	1	2,700	10,000.00
Wrecks	3	10,828	35,631.00
Barges	45	88,416	2,395,400.00
Composite vessels (cargo)	6	20,850	1,085,000.00

New steel vessels:	No. vessels	Dead weight tons	Sales value
Concrete vessels (tanker)	1	7,000	700,000.00
Tugs:			
Wood	22	1,744,400.00
Steel	27	3,396,000.00
Total	426	2,195,440	\$279,914,594.31

During the year, the Board authorized the transfer of 367 vessels, aggregating 263,632 gross tons to foreign registry. The types were: 305 wooden vessels, 155,686 tons; 55 steel vessels, of 97,879 tons; 6 iron vessels, of 7907 tons, and 1 composite vessel of 2100 tons.

The total losses of Shipping Board vessels amounted to 22 ships, of 97,135 dead weight tons, 9 of which were steel, 12 wood, and 1 concrete. The steel ships with their dead weight tonnage, date of loss, etc., were as follows:

Steel cargo—

Carydon, 4062, Sept. 9, 1919, foundered and sunk in Bahama Channel.

Council Bluffs, 4140, Nov. 13 1919, sunk off Terschelling; total loss.

Lake Conway, 2875, Sept. 9, 1919, lost in hurricane in Gulf.

Lake Licking, 3525, Feb. 21, 1920, stranded off Cuba.

Lake Stobi, 4155, June 1, 1920, stranded off Gota Islands.

Liberty Glo, 7600, Dec. 8, 1919, struck mine in North Sea; total loss.

West Aleta, 8660, Feb. 19, 1920, stranded on Terschelling.

West Arvada, 8800, Sept. 16, 1919, sunk near Dutch coast; total loss.

Total (eight vessels), 43,817.

Steel refrigerator—

Polar Land, 5520, Nov. 9, 1919, sunk 75 miles off Cape Breton.

Total (nine steel vessels), 49,337.

The activity of the Shipping Board in other directions may be appreciated by the fact that by 1920 a chain of foreign branches had been established with representatives in the principal ports of Europe and Scandinavia. In less than a year, or by June, 1920, there had been organized branch offices at the following places: In the United Kingdom, London, Liverpool, Manchester, Cardiff (for the whole of the Bristol Channel), Fowey, Hull, Newcastle; on the Continent, Helsingfors, Stockholm, Gothenburg, Copenhagen, Danzig, Hamburg, Rotterdam, Antwerp, Paris, Dunkirk, Le Havre, Brest, St. Nazaire, La Rochelle, Bordeaux, Gibraltar, Barcelona, Marseilles, Naples, Piraeus, Constantinople, Fort Said. Other ports were covered by traveling representatives. On June 30, 1920, the department had under its supervision in the United Kingdom ports 140 vessels, in Continental ports, 77, in European waters 114, a total of 331 vessels.

Reference already has been made to the amount of foreign commerce engaged by the United States merchant marine base on values. According to a survey of all cargo vessels entering and clearing in the foreign trade for the first six months of 1920, made by the Shipping Board, ships under the American flag were carrying about one-half of the ocean-borne commerce to and from the United States. The relative volume of trade is shown by the following analysis:

	Vessels	Deadweight tons	Cargo tons
American ships	9,550	51,584,620	22,724,217
Other ships	6,008	35,397,080	15,273,967
Total	15,558	86,981,700	37,998,184

As regards the export trade, American ships, composing 61.6 per cent of the vessels engaged, carried 51 per cent of the cargo, while foreign ships 38.4 per cent of the ships engaged, moved 49 per cent of the exports. A better showing was made in the import trade. The freighters of American documentation, 61.2 per cent of the ships engaged in the traffic, transported 75.9 per cent of the cargo tonnage, while the vessels of other nations, 38.8 per cent of the total number, carried 24.1 per cent of the freight.

The original programme adopted prior to the signing of the armistice naturally involved a greater number of ships than could be utilized even under normal peace conditions not to mention the curtailed commercial activity of 1920, the fleet, so provided, would have been composed of 3268 ships, of 18,381,276 d. w. tons, had not 961 ships, of 4,697,465 d. w. tons, been canceled after the signing of the armistice. The expenditures of the government were thus reduced \$650,000,000. Accordingly the net shipbuilding programme as of June 30, 1920, contemplated 2315 ships, of 13,875,711 d. w. tons.

In view of the foregoing discussion of the activity of the Shipping Board as revealed in its annual report, it must not be inferred that its work or its personnel was free from criticism. There were during the year serious charges of extravagance, waste, mismanagement, and even graft, which were more or less voiced in investigations, and rather generally in the public press. Here after the military and naval expenditure went the peoples' money raised from Liberty Bond sales and taxes and a critical spirit was general. In particular one feature of the Shipping Board's work in 1920 was its failure to dispose of war-built vessels. It was urged in defense that any new shipping company expanding in three years to 7,454,000 gross tons would be cumbersome and inefficient, but there was no little censure for the Board for adhering stubbornly to inflexible policies at variance with facts. It was charged that the Board's bungling had saddled the taxpayer with the maintenance and unprofitable operation of a huge fleet of expensive ships; for the operating expenses as shown by the consolidated balance sheet of June 30, 1920, exceeded the income by more than \$500,000,000.

By the end of 1920 the situation had not cleared and the outlook for the American merchant marine was not altogether promising. It must be realized that while the seagoing steam tonnage over 1000 gross tons increased from 1,601,000 gross tons on June 30, 1914, to 11,146,000 tons on Dec. 1, 1920, two-thirds of it was owned by the Shipping Board built under war time conditions and cost around \$200 a deadweight ton. The most efficient operation of a \$200-a-ton ship cannot possibly meet the competition of European and Japanese companies, some of which during the year had written off their steamers to as low as \$8 a deadweight ton.

In view of the statements just made it may be difficult to appreciate the fact that 237 companies with an authorized capital of \$50,000 or greater were organized in 1920 to engage in some branch of shipping activity, according to the

records specially maintained by *The Journal of Commerce* (New York). Of these 96 were started with an authorized capital of \$1,000,000, or greater. The indicated investment in the shipping industry involved in their formation was \$585,448,000, this capitalization figure setting a new high record for any 12-month period since the outbreak of the war in 1914. In 1919, the aggregate authorized capital of shipping concerns chartered was only \$323,613,000, or more than \$250,000,000 below last year's total. The smaller aggregate stood as the previous record.

The volume of new enterprise in the shipping field followed pretty closely the trend of conditions in the industry. During the early months of the year when employment was available for ships at fairly attractive profits, the number of new companies started and the amount of capital they involved was well above the returns for the closing quarters as shown in the tabular statement herewith. Throughout the year uncertainty as to government policy hampered development, a condition which prevailed even to the end of the year. The demoralization of ocean freight rates due to the collapse of international trade also was a controlling factor.

The average indicated investment per company during December figures out as \$1,210,938. This average compares with \$521,428 in November, \$3,650,000 in October, \$746,666 in September, \$1,227,500 in August, and \$1,458,533 in July. For preceding months of the year the company average was as follows: June, \$2,607,575; May, \$909,469; April, \$8,128,864; March, \$2,945,237; February, \$1,963,530, and January, \$2,384,531. The average for the 237 concerns organized during the year is \$2,470,244.

The indicated investment in new shipping enterprise during these periods is shown below:

Aug.-Dec.'14	\$ 1,844,000	Year 1917...	271,503,000
Year 1915...	37,062,000	Year 1918...	120,353,000
Year 1916...	69,466,000	Year 1919...	323,613,000
Year 1920—			
January	\$76,905,000	August	24,550,000
February	88,880,000	September	6,720,000
March	61,850,000	October	36,500,000
April	178,885,000	November	8,850,000
May	31,088,000	December	19,375,000
June	86,050,000		
July	26,250,000	Total	\$585,448,000

MERCHANT MARINE ACT. In the Merchant Marine Act of June 5, 1920, known as the Jones law, which provided for the continuance of the United States Shipping Board and for shipping affairs in general there was a recognition of the principle of Subsidies to American shipping at least in part. In section 24 of this act limitations on the rates and other conditions of mail subsidies were removed leaving the matter of compensation to the United States Shipping Board and the Postmaster General within, however, the appropriations made by the Congress. In section 11 of the same act, it was provided there would be loaned to shipowners to build new ships an amount not to exceed \$25,000,000 a year for five years derived from funds from the sale of government-owned ships and receipts from their operation. Furthermore in section 7 provision was made for certain experimental steamship lines to be operated by the Shipping Board until it was shown that they could not be made self-supporting.

Section 23 permitted the earnings of American vessels to be exempted from excess profits taxes

up to one-third the cost of approved types of new ships to be built in American yards. Up to Dec. 31, 1920, 39 vessels, totalling 453,000 deadweight tons and representing a declared value of approximately \$75,000,000, were included under the provisions of the law. Of the total, 31 of 376,000 tons were ordered by the large oil companies.

Section 34 of the act sought to remove any restriction on the United States to impose discriminating duties against foreign ships, by terminating any articles in treaties or conventions and directed the President to give 90 days' notice of such action. President Wilson refused to issue such a proclamation or take steps toward the abrogation of existing commercial treaties on the ground that the Congress had no constitutional right to authorize or direct such a proclamation, consequently this section was ineffective during the year. A large part of the Merchant Marine Act dealt with ship mortgages, the purpose being to popularize shipping bonds by making a vessel mortgage prior to material-men's liens. Up to the end of 1920 the effects of this provision were not visible. See SHIPBUILDING.

SHIPPING BOARD, U. S. See SHIPBUILDING; SHIPPING.

SHIPWRECKS. See SAFETY AT SEA.

SHOES, SHOE INDUSTRY. See BOOTS AND SHOES.

SHOOTING. Frank S. Wright of Buffalo, N. Y., retained his title as national amateur champion at the Grand American Handicap Tournament held at Edgewater Park, Cleveland, Ohio. Oscar Hansen of Fremont, Neb., tied Wright at 197 targets out of a possible 200, but in the shoot-off Wright scored 25 as against Hansen's 23. The doubles championship went to P. H. O'Brien. Butte, Mont., while the woman title holder for the year was Mrs. Judd H. Bruff, Pittsburgh, Pa. C. G. Spencer, St. Louis, Mo., captured the American professional honors after a shoot-off with R. O. Heikes. Dayton, Ohio. The amateur championship of America at clay birds was won by J. Clark, Jr., Worcester, Mass.

The annual matches of the National Rifle Association were held at Camp Perry, Ohio. The winners in the principal events were: team match, U. S. Infantry; individual, Sergt. H. Whitaker, U. S. Infantry; team, pistols, U. S. Marines; individual, Sergt. J. M. Thomas, U. S. Marine Corps. See OLYMPIC GAMES.

SIAM. A monarchy of southeastern Asia, between 6° and 20° south latitude and 97° and 106° east longitude with an approximate length from north to south of 1200 miles and a breadth of 480 miles. Capital, Bangkok.

AREA AND POPULATION. Area about 195,000 square miles; population 1915-16, 8,819,686; estimated, 1918-19, 8,924,000. The population of Bangkok is estimated at 628,675, of whom about 200,000 are Chinese; population of the island of Puket, about 179,600.

PRODUCTION. Agriculture is in a primitive condition. [The chief product is rice. In the fiscal year ended March 31, 1919, the total area under rice cultivation was 13,491,067 rai (2½ rai = about 1 acre) and the yearly average for the preceding five years reached 13,326,313, whereas the total area under six other principal crops during the same year amounted to only 161,595 rai, which were distributed as follows: Cotton, 27,626 rai, average 31,840; tobacco, 54,114 rai, average 57,819; peas, 14,357 rai, average 20,467 rai; sesame, 5,628, maize, 38,786 rai, average 34,212 rai. Live stock, April 1, 1919, numbered 4,593,136 of which 2,108,072 were buffaloes. Mineral resources are varied, including tin, tungsten, wolfram, iron, coal, zinc, manganese, and antimony. Tin is exploited on the island of Puket.]

COMMERCE. The following information in respect to commerce, finance and communications was supplied by the United States Bureau of Foreign and Domestic Commerce at the end of 1920: The total value of the foreign trade of Siam, entered and declared with the customs at the port of Bangkok, for the fiscal year ended March 31, 1920, amounted to 315,740,033 ticals (\$116,823,812 gold), compared with 265,123,347 ticals (\$98,095,638) for the previous year. The imports of foreign goods were valued at 138,439,074 ticals (\$51,222,457), and the exports of native products at 177,300,959 ticals (\$65,601,355). The import figures exceeded those for 1918-19 by 35,347,157 ticals (\$13,078,448), and the aggregate values of the exports were higher than in 1918-19 by 15,269,529 ticals (\$5,649,726). While in most instances the increased trade figures were accounted for by enhanced values of the goods, attention may also be called to the fact that in 1919-20 the average equivalent of £1 was 11.28 ticals, compared with an average value of 13.02 ticals for the three previous years. The tical values have been converted into United States currency at \$0.37 to the tical. During the

Countries	Imports		Exports		1919-20

					\$65,601,355

year the local bank rate of exchange ranged from about 34 to 42 of United States gold cents to the silver tical, whereas in the pre-war period the usual value of the tical was 37 cents. According to declared values at the port of Bangkok, the share of each country in Siam's foreign trade for the fiscal years 1918-19 and 1919-20, as contrasted with the pre-war fiscal year ending March 31, 1914, is shown in the table on page 627.

Siam is one of the three or more great rice exporting countries of the world. Exports of rice from the kingdom usually reach well over 1,000,000 tons a year, but owing to the partial failure of the 1918-19 rice crop and to export prohibition, the total exports for 1919-20 were reduced to about one-half this quantity amounting to only 740,453 piculs (493,963 short tons), compared with 14,201,434 piculs (946,762 tons) in 1918-19, and a yearly average of 17,982,240 piculs (1,198,816 tons) for the preceding five years. However owing to enormously advanced prices the total declared value of the rice exports for 1919-20 reached 123,082,698 ticals (\$45,640,598 gold), against 132,096,385 ticals (\$48,975,662) in the previous year.

COMMUNICATIONS. Vessels cleared at the port of Bangkok in 1919-20 number 639 of 581,230 tons, as compared with 826 of 683,102 tons in 1918-19. Of the ships entered in 1919-20, 240 were British; 175 Siamese; and only three were under the American flag. In the official railway report for the year ending March 31, 1919, the length of all the Siamese state railways was given as 2,376 kilometers (1 kilometer=0.621 mile), of which 2,215 kilometers were open for traffic. The working account for this period showed considerable progress on all the lines of the state railways. It was planned to link up the northern and southern state railway systems of the kingdom by a short railway to cross the Menam Chao Phya river on a bridge to be constructed a short distance above Bangkok. The work on the extension of the Korat line to Ubon was progressing satisfactorily. During May, 1920, the railhead of the northern line of the state railways reached Chiangmai, the northern Siamese capital.

FINANCE. According to official reports the budget estimates of the kingdom for the fiscal year ending March 31, 1921, were as follows: Ordinary revenue 72,500,000 ticals (\$26,825,000), ordinary expenditure 82,130,126 ticals (\$30,388,147), leaving a deficit of 9,630,126 ticals (\$3,563,147). The estimates for expenditures to be met from other sources than current revenue amounted to 15,963,025 ticals (\$5,906,319), of which 6,816,225 ticals (\$2,522,003) were to be drawn from the treasury reserve fund, 8,290,000 ticals (\$3,067,300) from loans, and 856,800 ticals (\$317,016) from the loan sinking fund. As compared with the previous year the ordinary revenue was gazetted less by 3,600,000 ticals (\$1,332,000), while ordinary expenditures were exceeded by 6,173,278 ticals (\$2,284,113).

GOVERNMENT. Executive power is in the king (nominally hereditary but designates his successor) who is advised by a cabinet consisting of the heads of departments. There is a legislative council of 40 members including the members of the cabinet, but royal assent to legislation is required. King in 1920, Rama VI (Chao Fa Maha Vajiravudh).

SIBERIA. The northern Asiatic part of Russia. Area, 4,831,882 square miles with a population estimated January 1, 1915 at 10,377,900 (later estimates placed it at 10,510,200). Chief cities: Irkutsk (population, 129,700); Tomsk (116,664); and Vladivostok (91,464). Nearly 70 per cent of the inhabitants are settled in the agricultural regions of western Siberia. The resources are rich, but have not been developed. Gold fields have recently been discovered in the government of Yeniseisk and in the basins of the Amur, Obi and Lena rivers. The men engaged in mining numbered about 50,000. The great Trans-Siberian railway begun in 1891 establishes communication between western Europe and the Pacific coast, and divides into two branches at Stretesk, one extending to Port Arthur and Peking and the other to Vladivostok. Another branch was under construction along the river Amur. See JAPAN.

SIDGWICK, ARTHUR. British scholar and naturalist, died at Oxford, about October 1st. He was born April 9, 1840, and was the brother of the philosopher, Henry Sidgwick; then studied at Rugby and graduated at Trinity College, Cambridge, where he won high honors and was elected a fellow. He taught for 15 years at Rugby and became lecturer and tutor at Oxford where his lectures on the Greek tragedies drew large audiences. He was a strong and able supporter of the Liberal party, being for 25 years president of the Oxford City Liberal Association. He prepared a number of text-books, including annotated classics of authors, and he published a few educational essays. For 30 years preceding his death he was a conspicuous figure in Oxford circles.

SIERRA LEONE. A British colony and protectorate on the west coast of Africa, having Liberia on the east and French Guinea on the north. Area of the colony, about 4,000 square miles; population (1911) 75,572, of whom 702 were whites. The chief town, Freetown, had a population (1911) of 34,090. Area of protectorate 27,000 square miles; population (1911) 1,327,560. The chief exports were: Palm oil, palm kernels, cola nuts, piassava, and ginger. Chief imports were: Cotton manufactures, coal, tobacco, and spirits. Statistics for trade and finance for 1916 to 1919 inclusive were as follows:

	1916	1917	1918	1919
	£	£	£	£
Imports	1,290,817	1,332,752	1,680,386	2,123,344
Exports	1,233,544	1,497,995	1,516,871	2,101,569
Revenue ...	551,106	546,449	583,159	748,779
Expenditure ..	532,940	512,844	544,011	740,383
Shipping* ..	1,553,812	1,526,640	1,736,247

* Tonnage entered and cleared.

SILESIA. The name of a former division of the Austro-Hungarian monarchy and also of a province of Prussia. The former was a crownland of Austria with an area of 1,988 square miles and a population, Dec. 31, 1910, 756,949. After the late war it became a part of the new republic of Czecho-Slovakia, (q.v.) The Prussian province of Silesia is the largest division of Prussia, the area being 15,573 square miles and the population (1910), 5,225,962. The question of the ultimate possession of Upper Silesia was one that agitated the Peace Conference and continued to disturb international politics throughout the year. It was to be settled by

plebiscite early in 1912. The area of Upper Silesia subject to plebiscite was 3,230 square miles with a population of 1,931,240 according to the estimates based on the census of 1910. See WAR OF THE NATIONS.

SILK. The silk industry in 1920 possessed special interest for the economist as it was one of the first to feel the effects of the general after war deflation. Furthermore it is a world industry in the sense that production, while widely distributed, that is in Asia and Europe, depends in a large measure upon distant markets, especially in America. Silk always responds to world-wide influences, to special or local conditions, as for example in the Far East or in America, and finally there are the special factors peculiar to the industry itself. These last are readily apparent and centre in the main on the fact that silk is a natural product dependent greatly on favorable natural conditions, and on the fact that it is universally a luxury which is bound to suffer by changes in the prosperity and purchasing power of a community. At the time of general inflation, which followed immediately after the war's conclusion, silk participated in the general advance of prices, affording opportunity for extensive speculation. For the conduct of active business at these enhanced values and in 1919 there was an active demand for silk and silk products, vast capital was required and as a result in the process of deflation that took place in 1920, with a general curtailment of credits, silk prices and the silk industry were particularly vulnerable. Throughout the world banking credits began to tighten, and with lack of capital liquidation was inevitable. With a decreased demand and a more general feeling of caution and economy on the part of the purchasing public, prices of raw silk began to fall and this tendency with but occasional rallies continued during the year. This is illustrated by the following résumé of the price fluctuations on the Yokohama market during 1920, made by H. L. Gwalter, a New York Silk Importer and authority.

		(Pegged minimum prices to end of year)		

Reading between the lines, in this case literally, of the above table, the disorganized conditions

of Japanese finances are revealed, and this is a subject far beyond the range of the present summary (See JAPAN). Furthermore it must be realized that speculation was as usual no less a feature of the Orient than the Occident and when coupled with disorganized finances it was unwholesome and unbalancing to the raw silk industry. From January prices declined until low points were marked at the end of July. Early in September silk traders, reelers and the Japanese Government agreed on the formation of a buying syndicate for the purpose of halting the continual decline and stabilizing prices on a minimum selling basis, until a normal export demand was established. This syndicate, which had available resources of some \$35,000,000, bought silk as offered at arbitrary prices to sustain the market for the balance of the season.

There was general stagnation in the Japanese raw silk market from October through the year. Buyers and sellers were waiting for a start on the part of the newly organized syndicate or Imperial Silk Company, which on October 9 announced that it had definitely fixed prices on the basis of 1,680 yen for double extra, 1,610 yen for extra, 1,520 yen for Kansai No. 1 and 1,500 yen for Sinshiu No. 1, at which these official quotations were maintained for the remainder of the year. On November 30, 1920, the Japanese reelers shut down their plants, stopping all production for a period of 78 days, and it was decided to keep closed the flatures of the SINSHIU district for an additional 35 days. In China also towards the end of the year the flatures shut down.

JAPANESE SILK TRADE. As a result of unfavorable conditions already referred to Japan's silk industry suffered an unfavorable year in 1920. The only substantial increases in silk exports occurred in floss silk, silk handkerchiefs and sundry silk fabrics. These gains, however, did not make good even one-tenth of the whole loss. The following figures show the value of all silk exports during 1919 and 1920:

Kinds of Silk	1919 Yen	1920 Yen	Decrease Yen
Waste silk....	18,868,964	17,758,826	1,112,138
Raw silk....	623,598,914	382,599,683	240,999,231
Floss silk....	7,643,746	8,562,258	*818,512
Habutai....	97,831,427	85,607,112	12,764,315
Crepes....	24,765,369	22,137,909	2,627,460
Sundry silk fabrics....	15,411,456	32,073,978	*16,662,522
Silk handker- chiefs....	7,195,891	8,087,243	*891,352
* Increase.			

For the decrease in waste silk all buyers were responsible except Italy, whose purchase amounted to 2,158,784 yen, compared with 1,729,394 yen in 1919. In 1920 Great Britain and Argentina purchased more actively in the habutai trade, but the decrease in shipments to the United States and France was too heavy to be offset. The export of crepes showed gains only in shipments to Australia and Argentina. The decline was especially marked in shipments to Canada. Shipments of silk handkerchiefs to Argentina and other countries, however, offset the decrease in exports of that item to Europe and the United States.

A classification of the Japanese raw silk trade of 1920 according to the importing countries and a comparison with 1919 follow:

Countries	1919 Yen	1920 Yen	Decrease Yen
Great Britain.	2,326,026	2,172,517	153,509
France	17,157,285	37,097,186	*19,939,951
Un. States....	600,843,287	333,595,922	267,247,315
Australia	40,326	268,426	*228,100
Other countries	2,232,000	8,465,632	*6,233,542
* Increase.			

THE 1920 RAW SILK CROP. The world's raw silk crop of 1920 and its distribution were estimated as follows:

	1920 Kilos	1919 Kilos	1918 Kilos
Europe			
Italy	2,250,000	1,835,000	2,695,000
France	260,000	180,000	245,000
Spain	70,000	70,000	75,000
Austria-Hungary..	120,000	150,000	150,000
Total	2,700,000	2,235,000	3,165,000
Levant and Asia			
Minor	1,040,000	1,040,000	1,040,000
Asia			
Japan	12,790,000	15,150,000	14,655,000
China	5,000,000	5,550,000	4,885,000
Canton	2,250,000	3,170,000	1,680,000
India, etc.	120,000	145,000	115,000
Total	23,900,000	27,290,000	25,540,000
(1 Kilogram=2.2046 lbs.)			

Accordingly with a substantial crop for 1920 as shown above and a reduced demand at the end of the year foreign markets, while still unsettled, were able to supply American manufacturers. Italy's crop increased approximately 37 per cent. over the previous year, and was returning to ante-bellum conditions of production. Furthermore on account of the reduced value of the lira in world exchange high prices prevailed. The summer cocoon crop in Japan showed a decrease of 14.3 per cent. over the summer crop of 1919, but the autumn crop was better, with only a 5.8 per cent decrease over the autumn, 1919, crop. The Canton crop was estimated at about 20,000 bales short of the 1919 crop, and the Shanghai crop was practically normal. The Tussah crop for the year was poor.

RAW SILK IMPORTS INTO THE UNITED STATES. The total importation of raw silk into the United States for the fiscal year, July 1, 1919, to June 30, 1920, amounted to 47,133,713 pounds, against 34,202,672 pounds in 1918-19, showing an increase of 37 per cent. over the previous year. These figures when compared with those of previous years show the extraordinary growth of the American Silk Industry which of course has to depend entirely on imported raw material. Earlier figures follow:

Season	Pounds	Season	Pounds
1905-1906...	14,505,324	1915-1916...	33,070,902
1908-1909...	23,333,750	1919-1920...	47,133,713

The imports of 1919-20 classified as to the countries of origin are given below:

From	Pounds
Italy	2,863,000
France	38,000
Japan	33,361,000
China	10,780,000
Other countries	91,000
Total	47,133,713

In this period the imports from Japan increased some 17 per cent. and those from China doubled over the previous year. Considering the United States importation of 1919-20, with the

world's crop of 1919, estimated at 60,000,000 pounds, it is realized that the United States consumed more than 78 per cent of the total raw silk production of the world.

But the record imports of 1919-20 could not be maintained in view of the conditions prevailing in the year 1920, and the falling off of imports into the United States may be gained from the following tabulation, comprising the first three quarters of the calendar year 1920.

	1920 Pounds	1919 Pounds
Third Quarter		
Italy		4,345
Japan	41,382	76,365
China	5,513	25,794
Total	46,895	106,504
Second Quarter		
Italy	327,553	22,650
Japan	5,457,480	9,280,608
China	2,142,803	2,343,034
Total	7,927,836	11,646,292
First Quarter		
Italy	669,782	
Japan	7,936,937	4,479,830
China	2,382,536	506,206
Total	10,993,255	4,986,036

RAW SILK PRICES AT NEW YORK. The following table depicts the price movement as revealed in the quotations for two important grades of raw silk on the New York market during the year, at the end of the months specified:

	Jap. dble. ex. A	Kan. I
January	\$18.00	\$17.50
February	15.00	14.50
March	14.50	13.40
April	10.70	9.80
May	7.80	6.50
June	8.00	6.65
July	5.90	4.75
August	5.75	4.85
September	7.05	6.45
October	6.80	6.10
November	6.40	5.90
December	6.20	5.75

These prices naturally reflected conditions in the East as well as in America, though at times they were as much as 50 cents lower in New York than in Yokohama. Production of American mills was curtailed during the year and purchases towards the winter were merely to supply immediate needs. The manufactured products were in slight demand and at prices where there was often a loss in manufacture even at the prevailing prices of raw silk. However New York stocks declined and in the principal warehouses on December 1 were reduced to 48,357 bales from 67,824 bales on February 1, and were composed of 333 bales of Italian silk, 36,965 bales of Japan silk and 11,059 bales of China and Canton silks. Early in the year stocks had shown 2,182 bales of Italian silk and 54,504 bales of Japan silk.

In the latter part of the year American silk manufacturers were interested in the proposed revision of the tariff and united to urge increased duties of manufactured goods in order to maintain the different rates of labor. It was argued that in 1920 the imports of broad silk from Japan into the United States amounted to some \$43,000,000 out of total imports of \$50,000,000. These Japanese imports had increased in six years from \$3,000,000 and Japan with its cheap labor and proximity to raw material was becoming

an important competitor as its mills were installing modern power looms.

In view of the speculation in the raw silk industry it was proposed during the year that an American Raw Silk Exchange should be established at New York and the matter was seriously debated. While it was held that such an agency might promote speculation yet it was argued that it would make a free world market closely connected with other Silk centres so that there would be general rather than special trade conditions.

For new mill construction. See TEXTILE MANUFACTURING.

SILVER. The following preliminary figures for silver production in the United States in the calendar year 1920 were supplied by the United States Bureau of the Mint and the Geological Survey:

State or Territory	Silver Fine Ounces	Value*
Alaska	792,751	\$804,745
Alabama	5	5
Arizona	6,098,251	6,190,518
California	1,513,495	1,536,394
Colorado	5,572,407	5,656,718
Georgia	140	142
Idaho	7,531,258	7,645,201
Illinois	8,500	8,629
Michigan	510,601	518,326
Missouri	123,219	125,083
Montana	13,583,164	13,788,677
Nevada	7,392,689	7,504,540
New Mexico	764,586	776,154
North Carolina	11	11
Oregon	182,558	185,320
South Carolina	0	0

Compared with 1919 the figures show a reduction in output of 117,941 ounces.

* Silver valued at \$1.01513 per fine ounce being the average price based on the New York market Jan. 1 to 17, and \$1.00 per fine ounce thereafter. By the terms of the Pittman Act and Mint regulations the domestic silver produced and reduced in the United States subsequent to Jan. 17th is salable to the Director of the Mint at \$1.00 per fine ounce.

It is almost axiomatic that at a time of unsettled world economic and political conditions, silver is more or less an important feature in the general consideration. This, of course, follows from the fact that silver not only enters into the arts and commerce generally as a commodity, but for a large part of the world, embracing millions of people in the Orient, it is a measure of value so that its fluctuations have a vast meaning and relation to the prosperity of many peoples and nations. Therefore, when the accompanying table of monthly average prices of silver is studied showing after a high price of \$1.37½ or above coinage parity on Nov. 25, 1919, on 1920 there was a variation from \$1.32827 in January to \$.64774 in December, the significance can be appreciated. In London bar silver ended the year at 40½d., which was only 2d. more than its lowest for the year, recorded on December 10. Foreign silver was quoted in New York on December 31, at 64¼ cents, which was 5 cents more than the low for the year, recorded on December 10. The highest for the year 1920

was 89½d., recorded on February 11, in London, and \$1.37½ for foreign silver in New York, on January 11.

* Estimated.

Beginning with December, 1920, the Treasury of the United States began to release standard silver dollars for export to China, and up to March, 1920, a total of \$13,000,000 of silver had been shipped to the Orient. The Pittman act of 1918 (See YEAR BOOK for 1919, article *Silver*) was in effect and purchases of domestic silver to take the place of silver dollars destroyed were begun in May at the rate of \$1.00 per ounce 1000 fine. By November 30, approximately \$26,500,000 had been purchased under the Pittman Act, monthly purchasing averaging 4,000,000 ounces. There had been \$208,900,000 ounces in the silver dollars broken up, so if the price of silver was not to be above \$1.00 and domestic production was to remain constant it would require some three and a half years to make up the quota. These purchases were of course advantageous to American silver mines, but this price fixing did not stabilize the world price of silver or prevent its eventual collapse.

The silver situation is bound to depend in large measure upon the demands of India and China as to these countries goes the greater part of the annual production. China had sold to India in the years 1914 to 1917 silver estimated to aggregate some 77,000,000 standard ounces, thereby depleting her own supply and requiring up to the end of 1920 considerable amounts until a state of apparent saturation was reached. In 1920 in place of the normal favorable balance of trade for India which was met by the importation of gold and silver, there was an unfavorable trade balance and there were sold in India so-called Reverse Council Bills drawn on London against the gold standard reserve which had been accumulated from the profits of the rupee coinage. These bills from Jan. 1, 1920 to Dec. 1,

1920, were said to total £55,000,000. Referring to the table showing the monthly price of silver for 1918, 1919, and 1920 it will appear that there was in this period a rapid though gradual rise to a maximum early in 1920 followed by an even sharper decline. For this rise the increasing demands for Indian currency and the purchase of bullion by the British government for India account were of course largely responsible but there were also as contributing causes the great excess of merchandise exports from Bombay, Calcutta, and other eastern ports, the large disbursements on account of military activities in India, Egypt, Mesopotamia and Palestine, and finally the embargo on silver imports on private account. If such causes explained the use of silver, its fall could be quite as readily accounted for. Bullion purchases on government account ceased in 1919 and there was an unfavorable balance of trade against India in the last six months of 1920. Paper money was substituted for the silver rupee. There was an unfavorable monsoon or lack of rain in India, and a serious famine in five important provinces of China. Early in the year the Japanese silk market had collapsed and there was rapid and enforced deflation throughout the East generally. So that all in all the Orient suffered from limited resources and low prices with a dull and decreased export trade.

The table shows that the world's silver production in 1920 declined from that of the previous year. This was due to decreased outputs in most of the producing fields, with an exception, perhaps, in the case of Mexico, but late in the year that country succumbed to falling prices and by the second week in December many properties were closed down and there were over 60,000 miners out of employment. As compared with 174,517,414 fine ounces in 1919, in 1920 according to the estimates of the *Engineering and Mining Journal* (New York) the output of silver was 159,000,000 fine ounces distributed as below:

	Ounces
United States	50,000,000
Mexico	56,000,000
Canada	13,000,000
South America, Central America and West Indies	17,000,000
Europe	5,000,000
Australia	8,000,000
Asia and Africa	10,000,000
Total	159,000,000

The same authority gives the distribution of the year's production increased by 27,000,000 ounces of melted coin silver received in the London bullion market from Continental Europe as follows:

DISTRIBUTION OF SILVER PRODUCED IN 1920

	Ounces
United States consumption in the arts..	23,000,000
United States Mint purchases under the Pittman Act	30,000,000
Mexican government purchases	9,500,000
English consumption in the arts	4,000,000
English mint—for medals	2,000,000
Shipments to India from England	14,000,000
Shipments to India from United States..	200,000
Shipments to China and the Far East from United States	70,000,000
Shipments to China and the Far East from England	18,000,000

	Ounces
United States Mint purchases for subsidiary coinage and other buyers, distribution unknown	15,300,000
Total	186,000,000

Exports of fine bullion from the principal shipping ports of North America during the past 12 months are approximately as below:

SILVER EXPORTS DURING 1920	
	Ounces
New York to England	5,000,000
New York to India	200,000
San Francisco to China, including Hongkong	62,900,000
San Francisco to Japan	4,600,000
San Francisco to French East Indies	2,100,000
Halifax to England	3,800,000
Vancouver to China and Far East	4,400,000
Total	83,000,000

In value silver imports for the year 1920 totaled \$88,100,000 as against \$89,400,000 in 1919. Exports of silver were valued at \$113,600,000 as compared with \$239,000,000 in 1919. (See ALASKA).

SIMMONS COLLEGE. A non-sectarian institution for the education of women, at Boston, Mass., founded in 1899. There were 218 students enrolled for the summer session, and 1278 for the regular fall session. The members of the faculty numbered 67. The productive funds of the institution amounted to \$2,384,098. The income for the year was \$283,573. There were 32,813 volumes in the library. Three years of a language required instead of two years. "Free margin" subjects are to be accepted with certain limitations. No conditions allowed. An addition to the endowment fund was being sought. President, Henry Lefamour, Ph.D., LL.D.

SIMMONS COLLEGE. An institution of the higher learning at Abilene, Texas, founded in 1891. There were 335 students enrolled in the summer session, and 701 in the regular fall session. The faculty numbered 33. There were 7,000 volumes in the library. President, Jefferson D. Sandefer, LL.D.

SINGAPORE. See STRAITS SETTLEMENTS.

SINN FEIN. See GREAT BRITAIN, *History*.

SKATING. The chief skating event of the the year 1920 was the contest between Oscar Mathiesen of Christiania, Norway, and Robert McLean, of Chicago, U. S., for the world's professional speed championship. The various races were held at Christiania, Mathiesen being victorious in three of the four events. The world's indoor professional title was won by Norval Baptise, Bathgate, North Dakota.

Everett McGowan, St. Paul, Minn., carried off the laurels in the international amateur championships held at Lake Placid, N. Y. He won the 880-yard, 1-mile, 2-mile, and 3-mile events. Rose Johnson, Chicago, proved the best of the women skaters and had the satisfaction of establishing a new world's record of 1 minute, 50 seconds for 880 yards.

SMITH, C WENHAM. American organist and composer. died in Newark, N. J., September 6. He was born in London, Dec. 25, 1851. He came to America in 1872 as organist at St. Patrick's

Cathedral in Newark. From 1892 he was organist at the First Presbyterian Church and the Temple B'nai Jeshuran. His compositions include two masses, many anthems, part-songs, and pieces for organ and piano.

SMITH, FRANK SULLIVAN. Lawyer, died in New York, November 15. He was known especially as a railway lawyer and had held important receiverships. He was born at Granger, N. Y. in 1851; graduated at Yale college in 1872 and went into the practice of the law in New York. After 1902 he was president of the State Board of Law Examiners. He was the director of several important concerns and was receiver of the Pittsburgh, Shawmut and Northern Railroad Company.

SMITH, GEORGE McLEOD. Managing editor of the New York Tribune, died in New York City, November 22. His newspaper activities extended over a period of thirty years. He was born at Orange, N. J., in July, 1869, and in 1900 became the managing editor of the Philadelphia Press. Two years later he was night editor of the New York Sun and in 1912 became managing editor of the Evening Sun. He became managing editor of the New York Tribune in October, 1919.

SMITH, ISAAC GREGORY. British clergyman and author, died, January 19. He was born at Manchester, Nov. 21, 1826, and educated at Rugby and Trinity College, Oxford. He was for a long time rector of Great Shefford, and was Bampton lecturer in 1873. His publications include: *Faith and Philosophy; Aristotelianism, Modern Thought; History of Christian Monasticism; The Athanasian Creed; What Is Truth?; On Assent to Creeds; Thoughts on Education*, etc.

SMITH, JAMES ALLWOOD. Consul-general, died, October 2. He was born at Grand Rapids, Mich., Nov. 3, 1865, and educated at Williston Seminary, Easthampton, Mass. He became manager of large marble interests in Vermont in 1891. From 1897 to 1907 he was American consul at Leghorn, Italy. He was then consul-general in the Congo Free State and at Genoa, Italy, and after September, 1913, he was consul-general at Calcutta, India. In politics he was a Republican.

SMITH, VINCENT ARTHUR. British historian of India, died at Oxford, February 6. He was born in 1848 and entered the Indian civil service in 1869, holding various administrative offices and becoming a district judge in 1895. In 1898 he was appointed a commissioner and his service was spent in the middle region of Northern India. His studies of contemporary life and of Indian antiquities were profound and his books on India were highly valued by experts.

SMITH, WATSON. British chemist and writer on chemistry, died, May 1. He was born at Stroud, England, Jan. 16, 1845, and educated at Owens College, Manchester and at German universities. From 1881 to 1915 he was editor of the *Journal of the Society of Chemical Industry*. For 10 years he was engaged in industrial chemistry as manager and chemist. He was professor of applied chemistry at University College, London. He made a number of important discoveries in chemistry and wrote extensively for the chemical journals.

SMITH COLLEGE. A non-sectarian institution for the higher education of women, Northampton, Mass., founded in 1871. The enrollment for the summer session of 1920 was 70; that for

the regular fall session was 1940. There were 231 members in the faculty. The endowment fund amounted to \$3,290,000 and the income amounted to \$531,389 for the year. The library contained 83,200 volumes. President, William Allan Neilson, Ph.D., LL.D.

SMITHSONIAN INSTITUTION. Founded in 1846 by act of Congress. This Institution is the result of the bequest of James Smithson of England who left his property to the United States of America "to found at Washington an establishment for the increase and diffusion of knowledge among men." A Board of Regents composed of the Vice-President, the Chief Justice of the United States, 3 members of the Senate, 3 members of the House of Representatives, and 6 other persons outside of those offices to conduct the business of the Institution.

The Secretary's report for the year ending June 30, 1920, shows the total permanent fund was \$1,082,896.02. Income for the year amounted to \$171,788.35, which added to the cash available on July 1, 1919, made the total resources for the year \$173,911.13.

Geological field work in the Canadian Rocky Mountains was continued by the secretary during the field season of 1919, with the following objects in view: (1) the discovery of an unmetamorphosed, undisturbed section of the Upper Cambrian formations north of the Canadian Pacific Railway; and (2) the collection of fossils to determine the various formations and to correlate them with the Upper Cambrian formations elsewhere. Special attention was given to the glaciers of which there are many fine examples in the region. Beautiful photographs of some of these were obtained, one showing a complete glacier from its névé to its foot. Two short field trips were taken during the year by Dr. R. S. Bassler, curator of paleontology, for the purpose of securing certain specimens of fossils and rocks required for the Museum exhibition series. The Collins-Garner French Congo Expedition was returned to this country early in 1919. Mr. C. R. W. Aschmeier collected and turned over to the Museum some 2500 mammals, birds, reptiles, fishes, and invertebrates. The Smithsonian African Expedition sailed on July 16, 1919, for Cape Town. One shipment of material was received by the end of the year consisting of 239 mammals and birds from South Africa. The Australian Expedition under Mr. Charles M. Hoy sent one shipment during the year consisting of 240 mammals, 228 birds. Dr. Ales Hrdlicka made an extended trip to the Far East in the interest of his researches on the origin of the American Indian and the peopling of Eastern Asia. Mr. Emery C. Leonard was sent with Dr. W. L. Abbott to Haiti on his last visit of exploration in that country from February to July, 1920. A collection aggregating 10,000 specimens was secured by Mr. Leonard in several characteristic regions. This material will prove of exceptional value and interest from the fact that little botanical collecting is being done in Haiti, the Flora is in consequence very imperfectly known. Dr. A. S. Hitchcock, custodian of the section of grasses in the National Museum, conducted a botanical expedition to British Guiana. The botanical results were very satisfactory, about 1200 members of plants being collected. Especial attention was given to the grasses, of which 171 species are now known in the colony. Mr. Paul C. Standley spent 10

weeks on a botanical expedition in the Glacier National Park, Montana. About 4000 specimens, representing over 900 species of plants were obtained. Mr. William R. Maxon conducted a botanical exploration in Jamaica where 10,000 specimens were collected. The exploration in Santo Domingo conducted by Dr. W. L. Abbott was conducted with very satisfactory results.

The Institution and its branches issued during the year 95 volumes and separate pamphlets. Of these various publications there were distributed a total of 143,290 copies. The Smithsonian library received during the year 6995 volumes and pamphlets. Continued use of the library's collection of works on aeronautics has been made by students both of the United States and of foreign countries. Forty titles were added to the collection during the year.

NATIONAL MUSEUM. In June, 1920, a small congressional appropriation made possible the establishment of the National Gallery of Art as an independent bureau under the administration of the Smithsonian Institution. During the past year the Museum acquired a total of 216,871 specimens, classified as follows: Anthropology, 15,254; zoölogy, 101,554; botany, 35,211; geology and mineralogy, 22,400; paleontology, 400,000; division of textiles, 1716; mineral technology, 627; mechanical technology, 97; and National Gallery of Art, 12. Four hundred and ninety-five lots of material were sent to the Museum for examination and report by members of the staff, and 4306 duplicate specimens were distributed for educational purposes. A collection of objects relating to the World War, made possible through the coöperation of the War and Navy Departments has taken up a large amount of space in the Museum. This collection has proved to be very interesting.

The number of packages handled during the year by the International Exchange Service was 369,372, an increase of 98,512 packages over the preceding year.

NATIONAL ZÖOLOGICAL PARK. Total number of animals in the collection at the close of the year was 1427, representing 419 species. Of this total, 496 were mammals, 847 birds, and 84 reptiles. This number is 124 under the record year, nevertheless, the monetary and scientific value of the collection is much greater than ever before. Especially interesting among the animals added during the year were a number of accessions from South America.

The sundry civil act for 1921 carries an appropriation of \$80,000 for the purchase of a frontage of 625 feet on Connecticut Avenue, Washington, D. C., which is adjacent to the park.

The work of the Astrophysical observatory at Washington consisted largely of tabulating and reducing the results of the observations made at Mount Wilson in 1919. A new instrument for measuring nocturnal radiation, devised by Messrs. Abbott and Aldrich and constructed at the observatory instrument shop was successfully tried during the year.

SNOW, ALPHEUS HENRY. Writer on law, died, August 19. He was born at Claremont, N. H., in 1859, and studied at Trinity College, Conn., and at Yale, graduating at the latter in 1879. Having studied law, he was admitted to the bar at Hartford, Conn., where he practiced from 1883-7. After practicing at Indianapolis for several years he devoted himself to literary

work and resided at Washington, D. C. He lectured on colonial government at the George Washington University in 1908 and 1909. He was delegate to the international conferences at The Hague in 1910. He wrote the *Administration of Dependencies* (1902); *The Question of Aborigines in the Law and Practice of Nations* (1919).

SOCIAL ECONOMICS. See **CHILD LABOR; HOUSING; LABOR LEGISLATION; OLD AGE PENSIONS; STRIKES AND LOCKOUTS, etc.; also LITERATURE, AMERICAN AND ENGLISH.**

SOCIAL HYGIENE. For a survey of recent progress. See article in 1919 **YEAR BOOK.** In the year ending June 30, 1920, according to the United States Interdepartmental Social Hygiene Board, 46 States had adopted programmes of prevention, treatment, and control of venereal diseases as promulgated by the Secretary of the Treasury. During the year 326,000 cases of venereal diseases were reported to the State commissioners of health and 126,000 cases were treated in clinics operated under the programme laid out by the Secretary of the Treasury. Informational programmes were carried out in each of these 46 States carrying facts to the public through lectures, posters, pamphlets, moving-picture films, lantern slides, and other graphic media. With the result that probably the main facts connected with the hygiene of the venereal diseases became better known to the American public than ever before. Regulations and ordinances for the protection of the public and for the prevention of these diseases were adopted to a greater or lesser extent in each of these 46 States in 1919 and 1920. On June 30, 1920, there were 35 researches being carried on in 22 of the best American medical schools and universities in a scientific search for better methods in the prevention and treatment of the venereal diseases.

SOCIAL INSURANCE. Owing to the fact that a large number of legislatures did not meet during 1920 very little social insurance legislation was enacted. However, the Federal government passed a law regarding employers' liability on the high seas. The article provides that if death is caused by a wrongful act, neglect, or default on the high seas the personal representatives of the deceased may within two years sue the vessel or person who would have been liable if death had not resulted, and in such actions the doctrine of comparative negligence is substituted for contributory negligence. This law went into effect June 5, 1920. State legislation was enacted in only one state.

MISSISSIPPI. The act of March 27, 1920, provided that "Heirs of a person killed by the wrongful act or default of a ship or vessel may recover in all cases in which the person injured would have been entitled to recover damages if not killed by the injury."

MOTHERS' PENSIONS. Forty out of 48 states have now adopted some form of mothers' pension, according to facts made public in the *Annual Report* of the Chief of the Children's Bureau of the United States Department of Labor. They have recognized the principle that children should not be taken from their mothers

because of poverty alone. The rapid extension of the Mothers' Pension movement indicates the general belief of the country in the paramount value of home life and a mother's care. However, although large grants have been made in many of our States, the amounts in general are far too small. The increased cost of living has not been met and the full purpose of the laws is not attained. Some of the States are making careful studies of increased cost so that allowances may respond to the higher prices. The systems of administration vary widely in the different States. So also do the amount of the allowances and the methods of supervision. The Children's Bureau has pointed the necessity of making a careful investigation of the methods in use in all the States so that the country may be given the benefit of all the experience which has been gained through the operation of these laws.

MASSACHUSETTS. A commission was appointed to investigate the question of prenatal and postnatal aid and care for mothers and their children. This law was enacted Sept. 2, 1920.

SOCIALISM. **THE INTERNATIONAL.** The First International founded by Karl Marx and his followers in 1862, disappeared soon after the war of 1870. The Second International was created in 1889. During the late war it was split as a result of the nationalist attitude of the Socialists in the various countries, but its headquarters were still maintained at Brussels. The parties that broke away from this Second International included Socialists in Italy, France, Norway, and the United States. The Third International formed at Moscow in 1919 was based on the principle of class warfare and the dictatorship of the proletariat through a Soviet government and was under the control of Lenin and Trotsky. At the beginning of 1920, many moderate Socialist leaders were concerned with the reconstruction of the Second International. The years of war had divided the Socialist ranks into widely divergent Right and Left wings and the parties of the Left had become extremely radical. Many of the latter had already joined the Third International including groups in Italy, Norway, Serbia, Roumania, Sweden, Denmark, Bulgaria, Germany, Holland, Hungary, Jugo-Slavia, Spain, Switzerland, England and America. The attitude of the national groups is briefly indicated in paragraphs below on the respective countries.

THE SECOND INTERNATIONAL: GENEVA CONGRESS. A congress of the Second International was held at Geneva in August, 1920, in an effort to reconcile and reunite the working class movement throughout Europe and was attended by a score of different nationalities including Great Britain, Germany, Belgium, Sweden, Denmark and Holland and representatives of minorities in France and Switzerland. Great indignation had been expressed by Belgian and French Socialists against the German Socialist Democratic party for its support of its government in the war. These delegates insisting on raising the question of war guilt, the question was referred to committee and after several addresses had been made the German delegates made a confession of their failure and expressed their regret. A resolution was passed condemning war and calling for the immediate reconstruction of the bankrupt coun-

tries; demanding government intervention in the control of the import of foodstuffs and raw materials on behalf of the ruined nations; condemning imperialism, militarism and the forcible repression of subject races striving for self-determination. Another resolution definitely repudiated any dictatorship and all violence, and declared that the party stood for complete democracy, parliamentary government, and universal suffrage. The aims of true Socialism were defined in contrast to those of Bolshevism. It was proposed that an increasingly important part be played in coöperation with parliament by trade unions and professional unions voluntarily formed. Practical proposals for the administration of industries and services were made in a programme of Socialization. The changes were to be made gradually and without confiscation, the principle of compensation for expropriated owners being laid down. The plan for socialization involved the management of each national industry by a threefold national board representing the mass of workers, the managing and technical class, and the consumers and community as a whole. Comparatively few industries were to be nationalized, but a larger number might be controlled by municipalities or other local authorities. The voluntary consumer's coöperative societies were recognized as part of the organization of the socialistic commonwealth. According to the congress, labor included not only industrial manual work but also intellectual and agricultural work; in short the wage-earners, the intellectual workers, the independent handicraftsmen and peasants and all who personally coöperate in the production of utilities. Only those who idly live by owning were thus excluded from the laboring class. Here the decisions of the congress were in accord with those of the British Labor party two years before. Recognition of that party was shown also by the attribution to it of the task of negotiating with the elements not represented at Geneva in the hope of bringing them into harmony. Mr. Arthur Henderson was elected president, and Mr. J. H. Thomas treasurer. A new international executive of nine members, Mr. J. Ramsey MacDonald chairman, was to meet regularly at London, which, instead of Brussels, was for the time being at least to be the seat of the International Socialist Bureau. The main acts of the Geneva congress may be summed up as follows: It declared emphatically against the acts and programme of Lenin and Soviet Russia, and it incorporated British features and principles; it even gave a Fabian cast to its practical programme.

THE THIRD INTERNATIONAL. Far more important in its immediate effects was the Third International at Moscow, expressing as it did the principles and aspirations of Bolshevism, but these are best shown in the accounts of the various countries where the chief interest of the year was in the division between the moderate and radical groups upon the issue of Moscow leadership. From the first there was much dissension among Socialists in each country and at the close of the year when the twenty-one conditions laid down by Lenin for membership in the Russian International had been submitted and the replies of fifteen nations had been received there was evidence of wide differences among the countries themselves and between the groups within them. On the whole

although the anti-Bolshevist Socialists were still very numerous the year was marked by the increase of the extreme factions under Moscow influence.

GERMANY. A congress of the Majority Socialists was held at Cassel and a separate congress of the Independents was held at Halle, both in the autumn. At the congress of Cassel the attacks on the Treaty and especially on France were unusually bitter. The fundamental revision of the Treaty was demanded and the cruelty of the reparations was denounced. Appeal was made to the workmen of all the Allied countries to come to the aid of the workmen of Germany.

At the meeting of the Independents at Halle in October, the congress pronounced in favor of the adherence of that party to the Third International at Moscow, after hearing delegates from the Russian Soviet government. The division in the party on this issue amounted to an actual disruption. On the one hand was the wing that favored the Soviet government and pledged itself to the dictatorship of the proletariat in alliance with the Third International. On the other hand was the more moderate element which while calling itself revolutionary was opposed to Moscow. On October 16, the question of adherence to the Third International was decided in the affirmative by a vote of 237 to 156, and this was followed by the election of Adolf Hoffman, leader of the radical wing, as president of the party. The minority left the hall, but the communist majority continued in session. It went on with plans for concerting with Moscow a world revolution and for a general strike. The minority went into separate session and formed plans for communication with the revolutionary forces in all countries opposed to the Bolsheviks and for the preparation of a campaign against Bolshevik methods. They passed a resolution of sympathy with Bolshevik aims but expressed their opposition to the Bolshevik policy of destruction and terrorism. This split in the Socialist party was welcomed by the more conservative elements as lessening the danger of radical policies. The Independent Socialists in the previous election had polled nearly 6,000,000 votes although the party did not include more than about 900,000 paying members. The Communist element throughout Germany was numerically strong and was especially active in Berlin where a large mass meeting was held on October 17. See GERMANY.

FRANCE. On October 2, the French Federation of Labor in its Congress at Orleans adopted by a majority vote a resolution insisting anew upon its policy of complete independence. It proposed immediate action for the control of industry and commerce by the workingman, recommended a vigorous campaign for the nationalization of essential industries and appealed to the International Federation of Labor to join with it in the accomplishment of social change. Furthermore it affirmed its solidarity with revolutionary Russia, and demanded that agitation should be carried on until the Soviet republic should possess entire liberty of action and govern Russia in accordance with its own wishes. In general the parties that favored immediate action were defeated and the general sense was that the attack on society should be postponed until the

right moment. The Unified Socialist Party sent two delegates to the Third International at Moscow who made their report in the autumn. In the congress of Strasburg, February 25-28 the French Socialists decided that the principles set forth by the Moscow International did not contradict the essential principles of socialism and the congress accepted the idea of the dictatorship of the proletariat, though it did not favor affiliation with the Moscow body. But voted for the creation of an independent organization. Lenin had laid down the definite principles of proletarian dictatorship in his discussion with the French delegates and pointed out that their opinion did not conform to his own. Lenin argued that it was the most advanced element in the proletariat which became the state itself over against the bourgeoisie and over against the less advanced part of the working class. This conception seemed to require definite revolutionary action. Lenin, however did not demand of the French that they should at once revolt. It was for them to decide upon the proper moment but the important thing was to prepare for it.

The French delegates, after this exchange of views declared in the name of the French socialists that the party in France would remain faithful to Socialist principles and insist upon expropriation, the confiscation of the great landed properties and the socialization of the means of production. M. Marcel Cachin said: In short no revolutionary Socialist can refuse to accept expropriation as the aim of working class efforts, nor can he refuse to admit as a means to this end the employment of force with all the consequences that may follow including above all the dictatorship of the élite of the proletariat. The question of adherence to the Third International was the main subject before the Socialist congress at Tours during the last week in December. The extremists led by M. Marcel Cachin advocated it as the only means of satisfying the demand of the working class. The moderates as represented by M. Faure and others opposed it, pointing out that the course taken by the radicals had disorganized the Socialist parties in all countries and had aroused against them the peasant class, while at the same time it had provoked reaction among the people at large. In the speeches that were made, the extremists compared the Bolsheviks in Russia to the Abolitionists in the United States, when John Brown resisted the government at Harper's Ferry. A compromise measure was offered by the Centre, consisting of adherence in principle to Bolshevism without accepting the twenty-one points set forth by Lenin. They argued that the French Federation of Labor had lost a quarter of its members as a result of the failure of the railway strike which had been imposed upon it by the extremists. It was clear from the beginning that the radicals had the upper hand. Adherence to the Moscow International was promptly put to vote and carried by a large majority, namely 2,916 to 1,228. The attitude of the radicals was uncompromising. They held that if the social revolution were to succeed there must be perfect obedience to a central direction, and they wasted no time in argument, but proceeded directly to vote down their moderate opponents. In this congress the issue was clear, but at various other meetings of Socialists in

France the adherence to the Moscow International was more or less disguised under mere expressions of sympathy with the Soviet government or protests against the action of the capitalist governments against Russia.

After the congress of Tours, there was much lamentation among the moderates on account of the split in the party, but on the other hand it was pointed out by their opponents that the majority which had decided in favor of adherence to the Third International, consisted of two-thirds of the congress. The French socialist newspaper, *La Humanité*, for example, declared that it marked definitely the rupture with the old traditions of the Second International and with the humiliating routine of parliamentary socialism, which had practically resulted in nullifying Marxist principles. The conservative parties expressed great alarm over the situation declaring that the congress of Tours had been completely dominated by the Moscow government and had been also under the influence of a German woman delegate, Clara Zetkin, who had been a member of the secret meeting of Internationalists held March 25-26, 1915, at Berne, where it had been voted that the governments of the great nations should be held equally responsible for the war and that the peace should be won without annexations and without conquest. The conservative journals declared it significant that the same representative of Germany who had thus taken her country's part during the war should have won over the French Socialists to the Third International. They attributed it all to the machinations of the Germans.

ITALY. For an account of the labor movement toward the control of industry in Italy and the attitude of the extremists, see ITALY, paragraphs on *History*. As there noted, Italian Socialist delegates were sent to Moscow and brought back a report highly unfavorable to the revolutionist régime. Moreover, Lenin in ordering the expulsion from the Italian Socialist party of certain moderate leaders greatly offended a large moderate element among the Italian Socialists. There was a meeting of the Socialist party at Reggio Emilia in the first part of October which adopted resolutions on October 12, declaring that the use of violent or illegal means in class struggles should be only the last steps against the resistance of the capitalist element. While it did not condemn violent measures, it declared that such a revolution in Italy as corresponded to Russian Communist ideas would fail completely unless it were helped by the working classes of richer countries. At the same time it affirmed that if the occasion arose, the Italian Socialist party would avail itself of any means that offered for the conquest of political power. At the end of the year the Italian Socialists in convention rejected adherence to the Communist International at Moscow on the conditions imposed by Lenin. The minority withdrew and formed the Italian Communist party.

BELGIUM: CONGRESS OF THE LABOR PARTY. The Belgian Labor party congress was held at Brussels, December 11-12. The main subjects under discussion were those of discipline and the national languages. The Belgian Labor party has been solidly organized on the basis of existing trade unions and discipline has been rigorously maintained. The system rests on

the local federations of labor which are subordinate to a general council elected by the annual congress. The congress lays down the policy, but the general council carries it out. The chief power in the general council has been recently exercised by M. Vandervelde former president of the International and in 1920 minister of justice in the cabinet. If members of the Socialist or Labor party departed in any respect from the rulings of the party organization, they were called strictly to account. This had recently happened to several Socialist members of the government who had supported policies not acceptable to the official chiefs of the party. In 1920 the main object of the ruling element in the Socialist party was to checkmate the radicals. The majority were moderates and adhered to the Second International, while the minority was the party of revolution and supported the Third International. In 1920 about 80 per cent of the Labor party belonged to this group of moderate Socialists, while the extreme Socialists included only about 15 per cent of the Labor party. The extremists however carried on an active campaign. They had their own weekly paper entitled *The Exploited*, and they attacked constantly the acts of the majority. In 1920 they appeared to be gaining strength. The Brussels federation for example was almost entirely composed of them and the Antwerp federation was tinged with radicalism. Hence the importance from the point of view of the majority of repressing the radical movement. The Brussels congress adopted a severe resolution on this subject by a vote of 448,000 against 91,000 (37,000 not voting). This declared that the Socialist party must remain united. It then laid down its policies and declared that all members must submit to them. It disavowed the groups created by the minority and gave orders that they should be dissolved. The issue before the minority was either to accept this order and give up their programme, or to leave the party.

GREAT BRITAIN. The attitude of the labor groups in Great Britain is indicated by the following letter addressed by representatives of the British Labor party and the Trades Union Congress to the Communist and Socialist parties of the world:

"The great difficulty which confronts International Socialism is the division of the movement into two camps, as a result of the Russian Revolution of November, 1918. Bolshevism tried to establish, not only over Russia, but over every other country in the world, the method of seizing political power by armed force, holding that power by the same means, and changing the whole economic structure of society by decree and suppression. Since its first success in Russia it has somewhat modified its position, and at the present moment in this country it is informing its adherents that those who decry political methods are traitors to the cause of Communism, but that political action should be used solely to prove the abortiveness of the institutions which are to be captured. Obviously such a compromise with the unclean thing is bound to defeat itself, and will only make candidates who pursue such a policy ridiculous in the eyes of electors. It is political and revolutionary futility of the simplest kind.

"Obviously every Socialist who has any international instinct at all will see that an Inter-

national based upon Moscow principles can never represent more than the smallest and least influential fraction of the Socialist movement in the various countries. Moreover, the attempts made by Moscow to control national organizations, not only in general Socialist policy, but in the details of their own national work, must prevent every such organization with any self-respect and any sense of national freedom from putting itself under such a yoke.

"If, therefore, we ask for a united International upon a more liberal basis than that demanded by Moscow, we do so because we are convinced that Moscow possesses neither the breadth nor the stability to maintain an International. We ourselves desire to keep in the closest organic touch with our comrades in every other land. We desire to be represented at their conference, to consult with them, to help and be helped by them, but we must decline Moscow conditions and Moscow methods as the price of that co-operation."

See GREAT BRITAIN, *History*.

OTHER EUROPEAN COUNTRIES. In Spain the Bolshevik programme was favored in a Socialist congress in June, and definite adherence to the Lenin programme was accepted in September by the group headed by Marcellino Domingo. In Switzerland the executive committee of the Socialist party rejected allegiance to the Third International but the party itself split on that issue. In Norway a Socialist congress favored a Soviet revolution and programme, and adherence to the Third International, as did the extremists of the Socialist and labor parties in Sweden, but the Scandinavian Workers congress at Copenhagen voted against the Norwegian proposals by 385 to 15. In Austria the radical element at first accepted membership in the Third International but later broke off relations with Moscow. In the Baltic states a congress of the Social Democratic party at Riga, December 18-20, rejected adherence to Moscow.

THE UNITED STATES. The Communist party and the Communist Labor party in the United States declared their allegiance to the Moscow International. The Socialist party in a referendum on the subject decided by three to one to support it, but in doing so declared that it was not influenced so much by the tactics of that body as by the fact that it was making some progress against capitalism and therefore ought to be supported. The leaders of the Socialist party declared that the American Socialists would insist on being allowed to use their own judgment as to the methods of establishing a socialistic system in their own country and this attitude was affirmed at the International Socialist Party Convention in New York in May. At the end of the year the executive committee of the Socialists refused to recommend affiliation with Moscow, saying: "We concede to the Russian comrades the right to formulate their own internal policies without interference from any other section of the working-class movement of the world. What we concede to them we claim for ourselves. Every resolution adopted by our party implies or claims this right for the American movement."

On January 5th, the New York state legislature suspended five elected members, all Socialists from New York City, on the ground that they were affiliated with an anti-

governmental party and were guilty of treasonable speeches. They were Louis Waldman, and August Claessens of Manhattan, Samuel A. Dewitt and Samuel Orr of the Bronx and Charles Solomon of Kings County. Their trial began January 20 and closed, February 27. The charges, more specifically, as presented by the chairman of the judiciary committee were that the five assemblymen during the war had been pro-German and that they had allied themselves with a party which sought to overthrow the government by force. Against three of the Socialists evidence was presented for the purpose of showing that they had made treasonable and seditious speeches in public. Other evidence related to the official declarations of the party. The defense was conducted by the Socialist lawyer, Mr. Morris Hillquit, who declared that they were victims of persecution. The vote was taken on April 1, and stood at 116 to 28 against three of the accused and 104 to 40 against the other two. The majority report of the judiciary committee declared that the charges had been amply proved and that the accused were not obedient to the constitution and laws of the State or desirous of the welfare of the people or in sympathy with the government etc. The report said among other things that any party that acknowledged aliens in its membership should be excluded from the official ballot of the State. It was largely taken up with a condemnation of the Socialist party and its programme during the war. It especially condemned the party's control of its legislative members by a party oath. This affair aroused the widest comment all over the country and in both liberal and conservative quarters was violently attacked as an aggression on the rights of free speech and free opinion and as a departure from reasonable practice. Among those who protested against this action were Justice Charles E. Hughes and the Bar Association of the State of New York. They declared specifically that the method of procedure was unconstitutional and that the men should not be dismissed until the charges against them were proved. On September 21 the New York Assembly of the State of New York again faced the question. All five of the ejected members had been re-elected and this action on the part of their constituents was in large degree a protest against the course of the Assembly. On September 21 after a violent discussion, the Assembly voted to oust three of them, namely Waldman, Claessens and Solomon. The other two who were permitted to remain tendered their resignations at hearing of the expulsion of their colleagues. As to the Socialist party in the Presidential election, see the article UNITED STATES. In Socialist quarters a great increase in their numbers had been predicted as a result of the repressive measures taken by the government and especially of the course followed by the legislature of New York. As to the national vote, this prediction was not fulfilled. According to the estimates of the Secretary of the Socialist National Committee in December, the total vote for the country was between 930,000 and 960,000 and might, when missing votes were counted, extend to 1,000,000. Whereas it had been predicted that the number would extend to 2,000,000. The Socialist party had done little more than hold its own in the

country at large. In New York however, the effect on the Albany policy and other measures to suppress Socialism was, so far as could be inferred from the results, greatly to strengthen the party. In New York State the Socialist candidate Debs received four times as many votes as the Socialist candidate Benson had received in 1916.

SOCIAL SERVICE. See CHARITIES.

SOCIETY ISLANDS. See FRENCH ESTABLISHMENT IN OCEANIA.

SOCIOLOGY. See LITERATURE, ENGLISH AND AMERICAN; AND ANTHROPOLOGY.

SODIUM COMPOUNDS. The production, imports, and exports of sodium compounds all increased in the United States in 1920 over 1919, according to figures compiled by the United States Geological Survey. The sales of all sodium compounds and of metallic sodium amounted to 9,886,020 tons, valued at \$139,336,338, an increase of about 8 per cent in quantity and 17 per cent in value.

SOILS. It is estimated that there are in round numbers 850,000,000 acres of land potentially available for cultivation in the United States, and that of this about 500,000,000 acres are now actually used in productive agriculture. The area not so utilized includes forests and cut-over, swamp, and arid lands, the reclamation of which is in most cases so expensive as to be of doubtful economy under present conditions. The immediate problem of most importance from the standpoint of increased production appears, therefore, to be better use of the lands already under cultivation. This means a more complete knowledge of the productive possibilities of soils such as is furnished by detailed soil surveys and studies of soil utilization.

The soil survey conducted by the Bureau of Soils of the United States Department of Agriculture, in coöperation with State agricultural colleges and experiment stations and State departments of agriculture and geological surveys, supplies to a large extent this necessary information as regards the soils of the United States. This survey now covers 1,064,019 square miles, or one-third of the area of the continental United States. During the past year 67 areas located in 31 States and covering a total of 29,784 square miles, or 19,061,760 acres, was surveyed in detail, and 11,825 square miles, or 7,568,000 acres (in Texas) was covered by reconnaissance surveys.

There is constantly increasing demand for the information these surveys furnish from investigators, extension workers, teachers of agriculture, and those engaged in the settlement of new lands. The peculiar characteristics of different types of soil must be taken into account in land settlement, and in all work involved in the improvement and increased production of cultivated crops. The development of agricultural instruction in schools is also creating a large demand for the specific knowledge of soils and of general agricultural conditions furnished by the surveys. The Chief of the Bureau of Soils in his report for the year ended June 30, 1920, states that there has been no determination in detail of the various factors of soil fertility or productiveness and no land classification based primarily on soil characteristics because of the lack, until within recent years, of systematically accumulated data for an area sufficiently large to make this possible. The soil survey, how-

ever, has now covered the Eastern, Central and a large part of the far Western United States in sufficient detail to supply in large measure the necessary data for this purpose. The work of the survey has progressed to a stage justifying the preparation of a general soil map of the United States, and such a map is expected to be completed within another year. In some States the surveying of soils is already nearly completed, making possible the preparation of maps showing fully the soil resources of these States.

It is claimed that "no other nation has undertaken at any time so detailed and at the same time so comprehensive a study of its soils as is now being carried on in the United States." The current information as to similar work in other countries is very meagre and is such as to indicate that the pre-war work along this line has either not been resumed or is being continued to a rather limited extent.

The vital importance of a closer study of the productive capacity of soils is leading many scientific investigators to reexamine the fundamental basis of soil science and to study more minutely the many essential factors of soil fertility. These investigations have dealt especially with (1) the possible deficiency in soils of other essential constituents besides nitrogen, phosphoric acid, and potash, notably lime and sulphur; (2) the relation of the soil solution to plant nutrition; and (3) the biological and biochemical conditions essential to plant growth.

The Bureau of Soils is giving particular attention to the study of the chemical composition of the virgin soils of the United States as well as to the large-scale extraction of soils to determine the actual crystalline form of certain of the soil constituents. This work has shown "that the salts occurring in the soil solution are much more complex than had been realized and that the salts in the soil mixture are of the same general type as those in the Stassfurt deposits of Germany and in the beds of former inland seas and lakes that have evaporated and left their salts as deposits." It also appears that these complex salts vary somewhat in different soil types.

Recent investigations have confirmed earlier conclusions that both lime and sulphur are essential elements of plant food frequently deficient in soils. Leguminous crops especially are benefited by applications of sulphur on many soils. The sulphur fertilizers that have been used with good results include pulverized sulphur, superphosphate, and gypsum and other sulphates. Sulphur causes an increase of soil acidity unless used with liberal applications of lime.

The complex problem of soil acidity and its correction continues to receive much attention. It appears to be established that compounds of aluminum are frequently the determining factor in acidity of sandy loams and the lighter silt loams as well as in swamp soils. It has been found that acid soils are unfavorable to the growth of certain organisms which destroy toxic compounds in soils, thus indicating that the correction of soil acidity may not always have the direct beneficial effect expected. It appears that the beneficial effect of liming on otherwise fertile soils may be due not so much to correction of acidity as to the making of favorable conditions for soil organisms, especially the legume organisms.

Investigations relating to soil nitrogen have

shown that continuous cropping with alfalfa increases the nitrogen content of semi-arid soils (where the rainfall is less than 20 inches). Nitrogen fixation appears to be correlated with the reaction of the soil, but as a rule is not influenced by the total amount of nitrogen present. There is evidence to show that while all uncropped soils steadily and persistently lose nitrogen in the form of nitrates, soils which have a relatively high nitrifying power lose this power very slowly and regain it readily under proper treatment. Further evidence has been obtained of loss of nitrogen from soils as a result of cultivation and excessive aëration.

Recent studies of the movement of soil moisture indicate that there is a direct relation between the moisture equivalent of soils and the mechanical composition: that is, that the moisture equivalent is an index of the proportion of different kinds of soil particles present.

Further studies on alkali soils have shown an antagonism between calcium and iron salts and a number of the common alkali salts as measured by ammonification and nitrification. Calcium sulphate has been found to generally increase the solubility of soil constituents, a fact which is of special importance in case of alkali soils.

It has been shown that in certain arid and semi-arid soils micro-organisms penetrate deeply into the soil, indicating that there is bacterial activity at considerable depths in such soils. A significant fact brought out by recent investigation is that well manured fertile soils and most of the common organic manures contain certain water-soluble growth-promoting substances which are apparently derivatives of nucleic acid. This is a step in the direction of the final determination of the identity of these substances, which appear to be of great importance in crop production and have a certain analogy to vitamins in animal nutrition.

SOMALI COAST. See FRENCH SOMALI COAST.

SOMALILAND, ITALIAN. See ITALIAN SOMALILAND.

SOMALILAND PROTECTORATE. A British protectorate comprising the Somali coast on the Gulf of Aden. Area, about 68,000 square miles; population about 300,000 mostly Mohammedans. The largest towns are Berbera with a population of about 30,000; Bulhara (7,300); and Zeyla (7,000). Live stock is the main source of wealth. Imports in 1919-20 were £503,213; exports, £231,011. The budget for 1919-20 was as follows: Revenue £81,870; expenditure £322,989. The governor and commander-in-chief in 1920 was Sir Geoffrey Archer. In January the attacks of the Mullah were repulsed and on January 21 his camp at Medisho was destroyed by an air raid. He was subsequently pursued by the British forces and in the early part of February it was reported that the power of the dervishes had been destroyed.

SONZOGNO, EDOARDO. Famous Italian music-publisher, died in Milan, March 14. He was born in 1836. It was he that instituted, in 1880, the competition in which the prize was awarded to Mascagni's *Cavalleria Rusticana*. Since then the house has maintained its prestige as the most formidable rival of the Ricordis. He was also proprietor and editor of the influential periodical. *Il Secolo*. He retired from active work in 1915.

SONZOGNO, LORENZO. Head of the famous Italian music-publishing house, died in Milan, April 2. He was a nephew of Edoardo, and born in 1877. In 1915 he succeeded his uncle as head of the firm.

SOUTH, UNIVERSITY OF THE. A Protestant Episcopal educational institution, at Sewanee, Tenn., founded in 1857. The enrollment for the year 1920 was 213 for the regular fall session, and 14 for the summer session. There were 27 members in the faculty of which six were new men. The productive funds of the institution amounted to \$1,018,774 and the income for the year was \$250,846. There were 38,897 volumes in the library. A new dormitory and inn were under construction. President, Rt. Rev. Albion W. Knight, D.D.

SOUTH AFRICA, UNION OF. A British dependency constituted by the South African Act of September, 1909, as a legislative union, comprising provinces of Cape of Good Hope, Natal, the Transvaal and the Orange Free State. Area, 473,096; population (1911) 5,973,394; white population May 4, 1918, 1,418,070. Capital, Cape Town, with a population in 1918 of 90,348; largest city Johannesburg (135,639). (For further details, see preceding YEAR BOOKS). In 1919 the movement of population was as follows: Births, 39,891; deaths, 17,601; marriages, 13,488. In the same year the emigrants numbered 24,784 and the immigrants 27,106. The persons naturalized in 1919 numbered 224 of whom 147 came from Russia, that country having supplied the largest proportion of foreigners naturalized during several years past.

EDUCATION. The state schools and state-aided schools in 1919 numbered 7,749, of which 4,760 were for whites and 2,989 for colored pupils; the pupils numbered 514,955 of whom 294,161 were white and 220,794 colored; teachers numbered 19,698. The private schools in 1919 numbered 425 with 27,424 pupils and 1,558 teachers. Higher education in 1919 included 2,429 students and 125 professors.

AGRICULTURE. Although South Africa has surpassed all other countries in the production of diamonds and gold, yet farming actually remains the industry of the people and the industry that offers the largest scope for development. The aggregate value of the agriculture products of the Union already exceeds that of mining. Nearly all farms are large. Small holdings, except near the cities, are uncommon. In consequence, a large proportion of the land is uncultivated, and there still remain vast areas which have never been touched by the plow. As a rule, a large part of each farm is set aside as pasturage, and farming and cattle raising go hand in hand in nearly every instance. The principal crops are maize, wheat, oats, kaffir corn, rye, barley, tobacco, cotton, and forage. Tea is also produced to a limited extent in Natal; and the cultivation of sugar is confined almost entirely to that province. Maize is actually the leading crop, and, in fact, South Africa is now recognized in the principal markets of the world as one of the foremost fields for the production of maize of good quality. On account of favorable climate and suitable soil maize is produced almost throughout the Union. However, the maize belt is often defined as the country lying east of the 26th meridian, which may be traced by drawing a line between Algoa Bay, Bedford, Cathcart, Queenstown, Aliwal North, Wepener, and Bloemfontein, and thence north to Lichtenburg and Zeerust. The Trans-

vaal is the largest producing province of the Union, but the Orange Free State holds the record for growing the heaviest crop per square mile. The production of maize has increased considerably in recent years. Oats hold a more important place than wheat in local agriculture. However, oats are not always grown for grain, but instead find a ready market in the form of food for horses and cattle. As applied locally the term "kafir corn" includes both kafir corns and durras. The former are indigenous to South Africa, and comprise the original red and white varieties, as well as the varieties improved from seed obtained from the United States. The durras are of North African origin, and include brown, white, and yellow durra. They are both nonsaccharine sorghums. Kafir corn is not only important as a foodstuff for the native (colored) population, but it is also employed as a substitute for maize in feeding cattle. The principal forage crops are lucerne, toff grass, and manna. The first-named is the most important, and wherever water can be procured this plant flourishes in nearly every part of South Africa. Tobacco is grown in various parts of the Union of South Africa, but the principal producing areas are the Magaliesburg and Kat River districts. The available farm area of the Union is, roughly, 229,300,000 acres, of which only about 14,000,000 acres are under cultivation. In 1919, 990,000 acres were planted with wheat, 132,000 acres with barley, 675,000 acres with oats, 139,849 acres with rye, and 4,420,000 acres with corn. The yield from the wheat crop of 1919 was 5,967,300 bushels, against 10,100,000 bushels in 1918. As the normal consumption of wheat in the Union of South Africa is about 11,000,000 bushels, this left a deficit of a little over 5,000,000 bushels. The corn crop was estimated at 34,683,000 bushels, compared with the census returns for 1918 of 45,143,000 bushels. While this was sufficient to meet the domestic requirements, the surplus available for export was considerably reduced. Oats and barley also suffered severely from the drought and the yield was estimated at 4,336,200 bushels of oats and 1,037,800 bushels of barley, as compared with 10,744,000 bushels and 1,643,000 bushels, respectively, in 1918. For the first time in the history of the industry the sugar crop exceeded local requirements, the yield for the 1918-19 season being 152,000 tons, an increase of 48,000 tons over the previous year. It was estimated that the 1919-20 yield would be somewhere between 150,000 and 170,000 tons. The cultivation of tobacco in South Africa has recently made rapid strides, the tobacco-manufacturing companies now obtain the bulk of their raw material from domestic sources. The area under cultivation in the Union embraces about 24,000 acres, producing, during 1917-18, 14,931,000 pounds of tobacco, the largest yield ever obtained. Owing to adverse climatic conditions during 1919-20 the yield was estimated at only 10,500,000 pounds. At the close of 1919 there were over 2,500,000 orange and lemon trees in the country. There were also 2,172,000 apple trees, 1,162,000 apricot, 97,000 mango, 206,000 nectarine, 6,000,000 peach, 789,000 pear, 1,144,000 plum, and 2,400,000 other kinds of fruit trees. The greater part of the fruit-growing industry centres in the Cape Province, although during the past years rapid development has been taking place in the Transvaal. The production of wool is one of the most important industries in the Union of South

Y-B-20-27

Africa, and next to gold, wool provides the principal item of export. The number of woolled sheep now exceed 25,000,000, and the production of wool for 1918 was 124,336,200 pounds. The production for 1919 was estimated to be about the same as in 1918.

The estimates for the year 1920 were as follows: Area of wheat, 823,000 acres; barley, 91,000 acres; corn, 564,000 acres. Production of wheat, 8,649,000 bushels; barley, 1,292,000 bushels; corn, 45,812,000 bushels. See AGRICULTURE.

MINERAL PRODUCTION. The production of minerals for 1919 was valued at \$247,418,338, or \$17,624,484 more than in 1918, when the production was valued at \$229,793,854. The production of gold showed a decrease of 86,566 ounces over the previous year, but the output of silver, diamonds, and coal was slightly increased. The copper output suffered a further decline of nearly 2,000 tons over 1918, and about 15,000 tons over 1917.

The following is a detailed summary of the mineral output for South Africa for 1919:

Minerals	1919	
	Tons	Value
Gold	*8,331,651	\$172,228,498
Silver	*891,804	991,043
Diamonds	*2,592,099	54,688,647
Coal	10,261,859	16,698,852
Copper	4,904	1,016,622
Tin	1,629	1,388,829
Antimony	32	2,706
Arsenic, white	8	3,226
Asbestos	3,934	323,262
Corundum	179	7,232
Graphite	86	12,799
Iron ore	3,601	5,261
Mineral paints, iron oxide, ochers, etc.	240	2,784
Iron pyrites	5,532	48,238
Talc	757	10,560
Lead ore	756	24,201
Magnesite	1,024	13,251
Manganese ore	155	3,776
Mica	3	1,796
Lime
Soda	52	3,684
Tungsten	4	3,046
Flint
Gypsum
Total	\$247,418,338
* Fine ounces. Carats.

In the diamond-mining industry, which, next to gold mining, is the most important of the mining industries in South Africa, the output was increased from 2,543,735 carats in 1918 to 2,592,099 carats in 1919, or 48,364 carats, although the value increased from \$33,876,008 in 1918 to \$54,688,647 in 1919, or nearly \$21,000,000.

COMMERCE. The total foreign trade for 1919 was the largest since the formation of the Union in 1910. This trade in 1919 was valued at \$672,942,373, as compared with \$575,198,034 for the year 1918, and \$532,671,000 for the pre-war year of 1913. In 1919 the exports, including raw gold, were valued at \$425,766,974, and the imports at \$247,175,399. The excess of exports over imports amounted to \$178,591,575. In 1918 the exports, including gold, amounted to \$334,368,731, and the imports, \$240,829,303, leaving a favorable balance of \$93,539,428. The values of the imports of merchandise (not including government stores) into and the exports from the Union of South Africa during 1918 and 1919 are shown by countries of origin and destination, respectively, in the following table:

Countries	Imports from		Exports to	
	1918	1919	1918	1919
British Empire				
United Kingdom	\$124,885,466	\$103,854,727	\$76,848,624	\$144,876,811

COMMUNICATIONS. In 1913, 1539 steamers and 68 sailing vessels, a total of 1607, of a net register of 5,353,794 tons, entered South African harbors, and during that same year 1,510 steamers and 67 sailing vessels, or a total of 1,577, of 5,277,324 net tons register, were cleared. In 1919 only 998 steamers and 77 sailing vessels, a total of 1057 ships, with a net tonnage of 3,647,404 tons, entered South African ports, and 909 steamers and 101 sailing vessels, or a total of 1070, with a net tonnage of 3,585,629 tons, were cleared.

The mileage of the state railways at the close of 1919 was 9,542 miles. There were 496 miles of privately owned line over which the government operated trains, and which it intended soon to absorb into the State system. The railways of the Southwest Africa Protectorate, comprising 1,409 miles, are also operated by the railway administration of the Union government.

FINANCE. The budget's estimates for 1920-21 were as follows: Ordinary revenue, £28,381,000; ordinary expenditure, £34,421,000; loan account, £13,894,000. The figures for the public debt and sinking fund were as follows: External debt, £123,390,000; internal, £50,515,000; total (gross) debt, £173,905,000; sinking fund, £9,856,000; net debt, £164,049,000. The budget for 1919-20 in detail was given by the *Statesman's Year Book* as shown on opposite page.

GOVERNMENT. The executive power is in a governor-general appointed by the Crown, who acts through an executive council chosen by himself. The legislative power is in the parliament, consisting of the senate and the house of representatives, the senate having 40 members of whom 8 are nominated and 32 elected, 8 from each province, and the house having 130 members elected from the provinces under the laws existing at the time of the formation of the Union. The governor-general in 1920 was Prince Arthur of Connaught, appointed in 1920. The prime minister was General J. C. Smuts; and the other members of the executive council were as follows: Minister of Agriculture, Mines, and Education, F. S. Malan; Minister of Finance, Henry Burton; Minister of Justice, N. J. de Wet; Minister of Railways, Interior and Health, Sir Thomas Watt; Minister of Posts and Telegraphs, Sir J. A. C. Graaf; and Minister of Lands, Colonel H. Mentz.

HISTORY

ELECTIONS. The results of the elections of March 10 were announced in March, as follows: Nationalists (followers of General Hertzog), 43; South African party, 40; Unionists, 25; Labor, 21; Independents, 3. The speech from the throne after Parliament opened, March 19, outlined a national programme which was aimed at calm-

<i>Revenue</i>		<i>Expenditure</i>	
	£		£

		Special Incremental Pay	125,000
Total	20,629,000	Total	23,075,180

ing popular discontent in regard to the high cost of living. Specifically it included measures against profiteering, food speculation, and rack-renting; for housing and currency reforms; promotion of railway construction, land settlement, and irrigation; industrial improvement including the application of the Whitley system to South African industries and the introduction of measures in respect to fair wages and the working day. Progress had been made in the policy with regard to the natives and a plan was being carried out for the creation of a permanent native commission and of advisory councils to which natives were to be admitted.

THE SECESSION ISSUE. As a result of the elections no party had a clear majority over the other three. The prime minister, General Smuts, though supported loyally by the Unionists, on the constitutional issue, had not the necessary parliamentary basis for action. Vain attempts were made to combine his followers and those of General Hertzog, but the latter were not ready for any compromise, except upon the issue of a South African republic, and to this General Smuts was opposed. A conference at Bloemfontein in September having shown that they were irreconcilable, General Smuts issued a manifesto denouncing republicanism and calling for the creation of a new party that should stand for loyalty to the constitution, irrespective of race. The Unionists, under the leadership of Sir Thomas Smartt, accepted this programme. They voted to dissolve their own organization and join the South African party in a body. As pointed out in preceding YEAR BOOKS the Nationalist party under General Hertzog had steadily gamed ground. At first the party worked clandestinely, while outwardly loyal to the constitution, but latterly it had declared openly its intention of setting up a republic. In this the Nationalists promised to use only constitutional means but it was believed by their opponents that there was no chance of realizing their aims except by revolution. For a time in the summer of 1920 General Hertzog seemed willing to forego the demand for secession as an immediate issue in practical politics, but the pressure of the younger and more radical element as represented by such leaders as Mr. Tielman Roos in the Transvaal and Dr. Malan in Cape Province compelled him

to come out publicly for secession and he did so just before the final conference at Bloemfontein.

At the close of the year attention was fixed on the approaching elections, appointed for Feb. 8, 1921, at which the South African party's appeal for unity would be definitely submitted to the people. It was regarded as the most critical event in the recent history of the country. The parties in Parliament were almost evenly matched, the Nationalist and Labor vote about equalling that of the South African party and the Unionists. Some of the arguments advanced by General Smuts as the campaign approached were: That the secession of the Union as a whole would split the Union itself into parts, cause civil war between the Dutch and the English, and drive the natives to revolt for they preferred British rule to the Dutch; and that if a new Dutch state should come out of it, it would be impotent and isolated; furthermore that the status accorded to South Africa along with the other British dominions in the League of Nations implied the very recognition of independence for which the separatists contended.

SOUTH AMERICA. See under the various South American countries.

SOUTH AUSTRALIA. A state of the Australian commonwealth, occupying the central and southern part of the continent; bounded by the Northern Territory on the north, Western Australia on the west, and Queensland, New South Wales and Victoria on the east. Area, 380,070 square miles; population at the census of 1911, 408,558; estimated, June 30, 1919, at 448,075, exclusive of the men in the Australian Expeditionary Force who had not yet returned. The above figures do not include the aborigines who were placed at over 20,000. The capital and largest city is Adelaide with an estimated population in 1918, including suburbs, of 235,751. The principal crops are: Wheat, wine, barley, oats, and hay. In 1917-18 the crops were valued at £10,291,443. The estimates of quantity produced in 1918-19 were as follows: Wheat, 22,936,925 bushels; wine, 6,554,125 gallons; barley, 2,497,743 bushels; oats, 1,609,467 bushels; hay, 569,945 tons. Legislative power is in a legislative council and house of assembly, the former having 20 members and the latter 46. In the election of 1918, 256,724 were registered, of

whom 134,188 were women, the franchise to women having been granted in 1898. Executive authority is vested in the governor, appointed by the crown, who acts through a responsible ministry. Governor in 1920, Lt. Col. W. G. G. T. Weigall; Prime Minister, A. H. Beake. See AUSTRALIA.

SOUTH CAROLINA. POPULATION. According to the preliminary report of the census of 1920, there were 1,683,724 residents in the state, January 1, 1920, as compared with 1,515,400 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 192,864, an increase of 9.2 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years, 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	2,230,000	42,370,000	\$49,149,000
	1919	2,270,000	36,320,000	71,550,000
Oats	1920	484,000	10,416,000	10,728,000
	1919	510,000	11,730,000	12,903,000
Wheat	1920	160,000	1,760,000	4,488,000
	1919	185,000	1,942,000	5,010,000

	1919	2,835,000	*1,426,000	254,567,000

* Pounds. * Bales. * Tons. * Gallons.

FINANCE. Balance, Dec. 31, 1919, \$1,100,477; receipts during the fiscal year 1920, \$10,102,940; expenditures during fiscal year 1920, \$9,801,066; balance December 31, 1920, \$1,402,021. The principal of the funded debt, December 31, \$5,382,308.

LEGISLATION. Among the measures passed in the regular session of the legislature may be mentioned: Act to encourage the teaching of agriculture, industry, and domestic science in the public schools; better regulation of charitable and correctional institutions; creating drainage system and authorization of taxation and bond issues to that end; drivers of motor vehicles required to stop and render aid after striking people; children under twelve prohibited from driving motor vehicles; authorizing cities of 50,000 or more to acquire and operate port utilities and providing for the creation of a port utilities commission; placing steamboat lines and truck lines under the jurisdiction of the railroad commission; sanitary inspection and provision for the conduct of hotels and restaurants; provision for annual physical examination by physicians and dentists of children in the public schools; prohibiting teachers having tuberculosis or infectious diseases from teaching in the public schools; free tuition for ex-soldiers.

ELECTIONS. The vote in the presidential election of 1920 was: Cox (Democrat), 63,490; Harding (Republican), 2266; as compared with the following vote in the election of 1916: Wilson (Democrat), 61,837; Hughes (Republican), 1558. The vote for governor was: Cooper

(Democrat), 58,050; no opposition; and the vote for United States Senator was: Smith (Democrat), 63,151; no opposition.

SOUTH CAROLINA. UNIVERSITY OF. A non-sectarian, co-educational institution located at Columbia; founded in 1801. In 1920, there were 540 students enrolled. The faculty had 37 members. The university is supported by appropriations which amounted to \$211,515 and \$75,000 for buildings. \$25,000 was realized from sale of property. The library had 60,000 volumes. There were four new chairs added, namely: (1) Bible Chair; (2) Rural Social Science; (3) Hygiene and Sanitation; (4) Business Administration. A school of commerce was also established. President, W. S. Currell.

SOUTH DAKOTA. POPULATION. According to the preliminary report of the census of 1920, there were 636,547 residents in the State, January 1, 1920, as compared with 583,888 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 74,564, a falling off of 4.0 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years, 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	3,520,000	105,600,000	\$44,352,000
	1919	3,200,000	91,200,000	108,528,000
Oats	1920	2,219,000	75,446,000	24,897,000
	1919	1,850,000	53,650,000	33,800,000
Barley	1920	1,073,000	26,825,000	13,949,000
	1919	875,000	19,250,000	22,138,000
Wheat	1920	2,886,000	26,282,000	30,224,000
	1919	3,725,000	80,175,000	72,420,000
Flaxseed	1920	220,000	2,200,000	3,680,000
	1919	145,000	1,150,000	4,930,000
Rye	1920	320,000	4,320,000	4,709,000
	1919	500,000	6,500,000	8,125,000
Hay	1920	4,500,000	*5,670,000	52,507,000
	1919	4,440,000	*5,008,000	83,158,000
Potatoes	1920	84,000	8,904,000	8,637,000

* Tons.

MINERAL PRODUCTION. The production of gold from mines in South Dakota in 1920 was \$4,339,000, compared with \$4,862,536 in 1919 and with \$6,565,337 in 1918; that of silver was 68,035 ounces, compared with 115,522 ounces in 1919, according to preliminary estimates by the United States Geological Survey. Production in 1920 in the Black Hills district of South Dakota was confined almost exclusively to two mines, the Homestake and the Trojan. The Homestake produced gold amalgam bars and cyanide gold bars, and the Trojan produced silver-gold cyanide bars and a few lots of smelting ore. All the other gold properties were closed on account of the high costs of mining.

MANUFACTURES. Preliminary figures of the census of manufactures in the State in 1919, published by the United States Bureau of the census showed a consistent increase at the census of 1919 as compared with that of 1914. In the order of their importance from a percentage standpoint, the increases for the several items ranked as follows: Wages, 200.9 per cent; value by manufacture, 170.1 per cent; value of products, 158.6 per cent; cost of materials, 153.8 per cent; salaries, 149 per cent; capital, 112.1 per cent; proprietors and firm members, 85 per cent; wage earners, 68.6 per cent; number of establishments, 57.6 per cent; salaried employees, 56.3 per cent and primary horsepower, 37.4 per cent. The capital invested, as reported in 1919, showed a gain of \$16,885,000, or 112.1 per cent, over that

in 1914. The average capital per establishment was approximately \$23,000 in 1919 and \$17,000 in 1914. The cost of materials used in 1919 showed an increase over that for 1914 of \$26,270,000 or 153.8 per cent. The average cost of materials per establishment in 1919 was approximately \$31,000, and in 1914 \$19,000. The value of products in 1919 showed an increase over that in 1914 of \$38,281,000, or 158.6 per cent. The average per establishment in 1919 was approximately \$44,000 and in 1914 \$27,000. The value added by manufacture in 1919 showed an increase over that in 1914 of \$12,011,000, or 170.1 per cent. The value added by manufacture in 1919 formed 30.6 per cent of the total value of products and in 1914 29.2 per cent. In 1919, as compared with 1914, the number of salaried employees showed an increase of 448, or 56.3 per cent, while the average number of wage earners increased 2,597, or 68.6 per cent. A comparative summary for the State for 1914 and 1919 follows:

	Census—		Per cent. of increase, 1914-1919
	1919	1914	
Number of establishments.....	1,415	898	57.6
Persons engaged in manufactures.....	9,039	5,346	69.1
Proprietors and firm members.....	1,410	762	85.0
Salaried employees.....	1,244	796	56.3
Wage earners (average number).....	6,385	3,788	68.6
Primary horsepower.....	22,436	16,324	37.4
Capital.....	\$31,945,000	\$15,060,000	112.1
Services.....	9,987,000	3,463,000	188.4
Salaries.....	2,079,000	835,000	149.0
Wages.....	7,908,000	2,628,000	200.9
Materials.....	43,349,000	17,079,000	153.8
Value of products.....	62,420,000	24,139,000	158.6
Value added by manufacture (value of products less cost of materials).....	19,071,000	7,060,000	170.1

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 109,874; Cox (Democrat), 35,938; Christensen (Farmer-Labor and Non-Partisan), 34,406; as compared with the following vote in the presidential election of 1916: Hughes (Republican), 64,217; Wilson (Democrat), 59,194; Socialist, 3760. The vote for Governor was: McMaster (Republican), 103,592; Bates (Non-Partisan), 48,426; Howes (Democrat), 31,870; and for United States Senator: Norbeck (Republican), 92,267; Ayres (Non-Partisan), 44,309; Cherry (Democrat), 36,833; Richards (Independent), 10,532.

OFFICERS. Governor, W. H. McMaster; Lieutenant-Governor, Carl Gunderson; Secretary of State, C. A. Burkhart; State Auditor, Jay E. Reeves; State Treasurer, W. S. O'Brien; Attorney General Byron S. Payne; Commissioner School and Public Lands, N. E. Knight; Supt. Public Instruction, Fred L. Shaw.

JUDICIARY. Supreme Court: Justices, James H. McCoy, Ellison G. Smith, Charles S. Whiting, Samuel C. Polley, J. H. Gates.

SOUTH DAKOTA, UNIVERSITY OF. A co-educational State institution at Vermilion, S. D., founded in 1882. The enrollment for the summer session of 1920 was 112; for the regular fall session it was 816. There were 84 members in the faculty, 12 being additions. The public land of 8600 acres at minimum sale was valued at \$10 per acre. The additional budget amounted to \$345,032. There were 45,000 volumes in the library. President, Robert L. Slagle.

SOUTH DAKOTA, STATE COLLEGE OF AGRICULTURE AND MECHANIC ARTS. A co-educational State institution at Brookings, S. D., founded in

1881. The enrollment for the summer session of 1920 was 163; for the regular fall session it was 877. There were 89 members in the faculty including two additions. The productive funds of the institution amounted to \$451,000, plus 138,000 acres of land. The income for the year was \$76,518. There were 24,000 volumes in the library and 8,000 pamphlets. The erection of one wing of the \$55,000 dormitory for wounded soldiers was nearly completed. This was to afford comfortable housing for the two hundred service men with disabilities who were receiving vocational rehabilitation training at this institution. An animal health laboratory valued at \$10,000 was nearly completed. Research work along many lines of veterinary science was projected. President, Dr. Willis E. Johnson.

SOUTHERN CALIFORNIA, UNIVERSITY OF. A Methodist-Episcopal, co-educational institution for the higher education at Los Angeles, Cal., founded in 1879. The enrollment for the fall of

1920 was 2010, and for the summer session, 718. The members of the faculty numbered 118. The income for the year was estimated at \$330,000. President, G. F. Bovard, D. D.

SOUTH GEORGIA. See FALKLAND ISLANDS, DEPENDENCIES OF.

SOUTH ORKNEY ISLANDS. See FALKLAND ISLANDS, DEPENDENCIES OF.

SOUTH SHETLAND ISLANDS. See FALKLAND ISLANDS, DEPENDENCIES OF.

SPAIN. A constitutional monarchy in southwestern Europe occupying the greater part of the Iberian peninsula and separated from France by the Pyrenees. Capital, Madrid.

AREA AND POPULATION. The total area is placed at 194,783 square miles, of which 19,005 are on the continent, the remainder comprising the Canary and Balearic Islands, and the Spanish possessions on the north and west coasts of Africa. Population estimated Jan. 1, 1919, at 20,719,598, compared with 19,950,817 in 1910. The largest cities with their population on Jan. 1, 1919, were: Madrid, 652,157; Barcelona, 618,766; Valencia, 245,162. Vital statistics according to the latest records were: Birth rate per 1000, 29.8; death rate, 22.1; marriage rate, 13. Total emigration in 1918 was 36,254 and had been chiefly to Argentina, Cuba, Brazil, Uruguay and Mexico. (See article IMMIGRATION.) No later figures for education were available than those given in preceding YEAR BOOKS.

AGRICULTURE. The information in this and succeeding paragraphs on production, commerce, finance, etc., was supplied by the United States Bureau of Foreign Commerce. The following are the estimates, in kilos (kilo=2.2 pounds), of the crop production for Spain for the year 1920:

Products	Kilos
Corn	695,410,000
Rice	284,810,000
Potatoes	2,851,155,100
Sugar beet	1,570,472,000
Sugar cane	72,789,000
Flax, in seed	1,308,300
Flax, in fiber	319,400
Hemp, in seed	3,406,200
Hemp, in fiber	7,899,600
Olives	1,350,060,300
Olive oil	263,259,100

In comparison with the crop of 1919, it may be noted that better yields were expected in the case of corn, flax, sugar beets, and potatoes, and less in the case of rice, olives, hemp, and sugar cane. The most important decrease to be noted is in the case of olives, namely, 463,039,500 kilos, with an equivalent of 73,134,600 kilos of olive oil. The total yield for 1919 was 1,796,810,800 kilos of olives, producing approximately 333,854,000 kilos of oil, which was only exceeded in 1911 and 1917.

Live stock in 1918, as shown by statistics subject to revision, included 576,889 horses, 1,049,471 mules, 916,328 asses, 3,173,577 bovine animals, 17,734,922 sheep, 3,685,808 goats, 4,106,791 pigs, and 400 camels, a total of 31,244,186 head. See AGRICULTURE.

MINERAL PRODUCTION. The total value of the mining and metallurgical products of Spain during 1918 was 1,387,097,669 pesetas, and in 1917, 1,363,242,958 pesetas, showing an increase of 23,854,711 pesetas in 1918. The value of ores at the pit amounted in 1918 to 545,916,704 pesetas, in 1917 to 488,464,290 pesetas; the value of the metals and mineral products from the smelting works amounted in 1918 to 841,180,965 pesetas, in 1917 to 874,778,668 pesetas. The value of ores rose greatly, but the quantities mined decreased after 1913, as shown by the following table of total quantities of minerals extracted during the years 1913 to 1918, inclusive (the 1918 figures are subject to revision):

	Metric tons
1913	61,703,689
1914	57,687,187
1915	41,209,081
1916	44,295,204
1917	44,478,041
1918	43,791,473

The output of the principal minerals during 1913, 1917, and 1918 was as follows:

Minerals	1913	1917	1918
	Metric tons	Metric tons	Metric tons
Iron	9,861,668	5,551,071	4,692,651
Soft coal	3,783,214	5,042,213	6,134,986
Copper*	2,268,691	1,901,841	1,007,707
Iron pyrites	926,913	376,918	590,008
Common salt ^b	60,429	781,106	320,531
Lignite	276,791	637,841	726,848

	Metric tons	Metric tons	Metric tons
Silver-bearing lead	23,800	13,218	3,505
Other	600	780	700
Silver	402	96	962

* Includes copper ore and ferrocyanous pyrites.
^b Includes rock salt and products of salt works.

INDUSTRIAL DEVELOPMENT. In 1916 and 1917 many industrial joint-stock companies were formed by Spanish capital, and in 1919 such capital devoted to industrial enterprises was estimated at 700,000,000 pesetas. This movement in favor of nationalizing Spanish industry was fostered by the law of July, 1917, definitely constituting the Commission for the Protection of Industries. This policy favored Spanish industry in intensifying the manufacture of textiles, stimulating siderurgical production, and the exploitation of coal mines. Benefits were also realized in other industries.

COMMERCE. The total foreign commerce of Spain during the year 1919 amounted to 2,410,811,720 pesetas (1 peseta = \$0.193 at par), of which 1,087,641,451 pesetas represent the value of the imports and 1,323,170,269 pesetas the value of the exports. The commercial situation of this country, as compared with the latest pre-war year, was reversed. Spain, like the United States, changed from a debtor to a creditor nation, as the result of the war. In 1913 the total foreign commerce amounted to 2,387,424,721 pesetas, with the balance of trade against Spain by nearly 229,000,000 pesetas, whereas in 1919 the balance of trade was in favor of Spain by over 235,500,000 pesetas. Aside from the export and import of gold, silver, and tobacco, the balance of trade was in Spain's favor by more than 456,000,000 pesetas in 1919, while in 1913 it was against Spain by more than 247,000,000 pesetas. The values of Spain's imports and exports of general merchandise, gold, silver, and tobacco in the years 1913, 1918, and 1919 are shown in the table at bottom of this page.

According to the Trade Communications report in 1920 American exports to Spain increased 240 per cent from 1914 to 1919, from thirty million dollars in 1914 to one hundred and two million dollars in 1919. The displacement of Germany, and also, in some part, of England and France in the Spanish market largely explained this favorable American trade growth. The geographical position of the country and its great natural wealth made possible the supplying of war needs of the belligerents on an important scale. The total trade balance in favor of Spain from the beginning of the war to the close of 1919 was approximately 4,000,000,000 pesetas (\$772,000,000 at nominal par of exchange). This strengthened the financial situation in the country in a remarkable manner. It is a striking fact that Spain granted a credit to the United States of 250,000,000 pesetas, of which 155,000,000 were actually utilized.

COMMUNICATIONS. Although the shipping statistics of 1919 showed a slight gain in compari-

Articles	1918		1918		1919

son with 1918, the number of Spanish steamers entering and clearing at Spanish ports was only a little more than half as great as during the latest normal pre-war year, while foreign steamers calling in 1913 numbered more than four times as many as in 1919. A still greater contrast is seen in the tonnage of the vessels, with a consequent reduction in cargo. The number of arrivals and departures of vessels at Spanish ports during the years 1913, 1918, and 1919 with tonnage is shown in the following tables compiled from *Resúmenes Mensuales de la Estadística del Comercio Exterior de España*:

May 17, 1886. The ministry in 1920 was as follows: Prime Minister and Marine (pro tem.), Señor Dato; Foreign Affairs, Marquis di Lema; War, Viscount Eza; Interior, Count de Bugallal; Justice, Don Mariano Ordóñez; Education, Marquis de Portago; Finance, Señor Domínguez Pascual; Public Works, Don Luis Espada; Labor, Don Carlos Canal.

CABINET CRISIS. The new ministry under Alende-Salazar encountered the same serious labor situation as its predecessors, for the employers and the extremists among the workmen were still in constant conflict. Throughout the country

Ministry of Public Instruction	152,547,888
Ministry of Public Works	331,549,429
Ministry of Supplies	1,953,979
Ministry of the Treasury	34,903,516
Expenses for collecting revenues	185,146,886
Spanish possessions in Gulf of Guinea	2,887,239
Action in Morocco	168,963,296
Total	2,403,730,314
Revenue	Pesetas
Direct taxes	712,110,068
Indirect taxes	654,230,000
Monopolies	402,170,000
Receipts of the State	23,570,504
Receipts of the Treasury	50,640,000
Total	1,842,720,572

GOVERNMENT. Executive power is vested in a king who acts through a council of ministers, and legislative power in the Cortes of parliament of two houses, namely, the Senate and the Congress. The King, Alphonso XIII, was born

there was a succession of strikes and lockouts which threatened to involve it in economic ruin, and the government's efforts to improve the situation were unavailing. The ministry was several times on the point of resigning during the winter and a number of changes in personnel were made. It was only after several months of debate that it carried through its budget. After this it retired, April 28. Efforts to form a new government lasted a week and resulted in the choice of the Liberal leader and former prime minister, Eduardo Dato, who formed a ministry out of a combination of Conservatives and Liberals, to which leader of the Conservatives, including especially Señor La Cierva and Señor Maura promised their support in all efforts to deal with the social and economic problems. This was the eighth ministry that had been formed in Spain in the course of two years and during the same period there had been as many as fifty changes of personnel in the ministry. Municipal elections held February 8, resulted in large Socialist gains.

SOCIAL CRISIS. There were serious disorders at Barcelona, and in the summer the civil governor was murdered. Reports of alarming social and economic conditions were frequent during the year. In Andalusia and other agricultural regions there was much discontent among farmers and peasants. In some quarters

the landlords gave way to the agitation for reform, in others they left their estates and went to the cities. In October, it appeared from the press that a crisis was impending on account of the growing demands of the working classes. According to the reports of unsympathetic observers, the Spanish government had yielded to German and to Bolshevik influences, and had permitted a policy of terrorism to develop among the trades unions. The unionists had resorted to "direct action" in a series of outbreaks at Saragossa, Bilbao, Corunna and especially at Barcelona, and instead of taking a high hand the government had made concessions. For example, the railway workers having demanded an increase of wages and threatened strikes the prime minister, Dato, had ordered the companies to submit. The companies yielded but demanded in their turn increase of rates by way of compensation. Parliament was called to take up the matter of the rates but the prime minister without waiting for parliamentary action proceeded to order by simple decree the increase of the rates and then secured from the King the dissolution of parliament. What surprised the commentators of this affair was the fact that the Dato government was ostensibly Conservative. To be sure, it did not belong to the strict Conservative groups represented by such men as Maura and La Cierva but to the group that was trying to re-align the party of the Right in such fashion as to meet the changing social needs. His party did not draw back before social reforms of a radical nature, resembling in this respect to some extent the policy of Signor Giolitti in Italy. But unlike the situation in Italy there was in Spain a strong element of opposition in the parliament. Nor did the dissolution effect any change in that respect for the principal party leaders agreed in blaming the prime minister for the dissolution. According to some political observers, public opinion had been poisoned by German propaganda and in any case the spirit of various Spanish publications was favorable to the rehabilitation of Germany and hostile to the strict anti-German policy of France. In one publication, for example, occurred the following remark: "It is the misfortune of France that it has Marshal Foch who happens to be a great strategic genius. What can be done with the genius of Foch? Manifestly it cannot be left unemployed." And on the subject of French policy toward Russia it declared that "for a people to choose its own form of government is a lost liberty for all continents since France has the happiness to possess a Foch." While this had been a pro-German organ during the war, something of the same spirit was displayed by others. Nevertheless though radicalism followed the same line as in Italy, there was in general a firmer resistance to it during the year. The extremists found little sympathy in the press and many papers attacked Bolshevism in all its forms. The attempt of the Third Internationale to control labor policies was generally resented.

GOVERNMENT PROGRAMME OF REFORM. On October 6, the prime minister, Dato, announced a programme of commercial and industrial reform, including the organization of a ministry of labor and an institute of social reform for the settlement of disputes between employers and workmen; measures of insurances and housing; measures of co-operation in working state and

municipal lands and private estates; an increased railway tariff on commodities other than the necessities of life; and various measures pertaining to forestry, irrigation, water-power, etc. The issues that mainly drew the attention of the press were those pertaining to industry and to land reforms, and the new railway tariff. Early in October the military forces in Barcelona were increased on account of the danger of either a strike or a lockout. In certain industrial centers the workmen were threatening to take control of the industries. In other parts of Spain the feeling against the great landed proprietors was assuming more dangerous forms. At Barcelona at the close of the year the radical movement was reported to be under control. Leaders of the Sindicato Unico, to which was attributed the murder of the civil governor in the summer, were arrested and thirty-six of them were banished to a fortress in the Balearic Islands.

THE DECEMBER ELECTIONS. According to reports, the government was confident of a majority in the coming elections. It was given out on October 23, that the only serious opposition came from Señors La Cierva and Maura and that the Liberals and even the Catalans were showing an indifferent attitude. It was also said that even among the supporters of the former prime minister Maura and the former war minister, La Cierva, there was a numerous following for prime minister Dato. The elections held, December 18, showed nevertheless a diminished government majority. But the radical groups also were diminished and the monarchist majority was increased. The results as published at the close of the year were as follows: Conservatives (government group), 197; Conservatives (Maura group), 21; Conservatives (La Cierva group), 20; Liberals, 102; Republicans, 15; Reformists, 8; Socialists, 3; Catalanian Autonomists, 18; Monarchist Union, 5; Jaimists, 3; Independents and Catholics, 12. The Socialists attributed their loss to the trade union campaign carried on in the industrial centers against the participation of workmen in the elections.

SPAIN AND MOROCCO. The Moroccan question continued in 1920 to be the subject of sharp discussion both in France and Spain. The general situation may be summed up as follows: The conservative and patriotic element in Spain believed that Morocco was the last remnant of the old imperial domain and therefore held tenaciously to the purpose of retaining it. The Spanish prime minister, Romanones, had said that if his country relinquished Morocco, Spain would cease to have any ideal object in international politics. For more than twenty years the Moroccan problem has absorbed the attention of the Spanish foreign office, which has continually asserted Spain's right to the northern part of the Sherifian empire. The intervention under the Maura government in 1909 for the purpose of suppressing disorders led to a war of occupation and soon afterwards the cost of this new Moroccan policy steadily increased, rising from 52,000,000 pesetas in 1914 to 170,000,000 pesetas in 1920; and the African army in the latter year numbered at least 60,000 men. Including all the military and naval expenses, the Moroccan appropriation in 1920 was placed as high as 726,000,000 pesetas. From time to time opponents of the government protested

against this Moroccan venture as costly and unprofitable. It was pointed out that Spain after ten years' effort had succeeded in conquering only about one-fifth of the twenty-four thousand square kilometers that nominally belonged to her. At this rate, according to the criticism of a former Spanish cabinet minister, half a century of warfare would be required to complete the conquest. On the other hand the Conservative party aimed at an enlargement of Spanish territory and especially at the acquisition of Tangier which had been placed under international control in 1912. When the war broke out this element comprising beside the Conservatives, the military party, and those who favored colonial expansion, counted on the defeat of England and France. German propaganda made the most of this spirit and promised Morocco and Gibraltar to Spain if she should preserve the policy of hostile neutrality toward the Allies, and at the same time occupy by force Tangier and Gibraltar. During the war sharp attacks on England were constantly appearing in the press. All these fell flat as soon as the armistice was signed. So far as England was concerned nothing more was heard of Spain's pretensions to Gibraltar, but expansion at the expense of France continued to be advocated. Tangier was claimed as an integral part of Spanish soil and a group of politicians undertook to sow discord between France and England and to take advantage of any friction that should develop between the two countries. According to French sources a strong party in Spain was frankly anti-French. The militarists who continued to exert much influence upon Spanish sentiment demanded Tangier as the objective of the Spanish military movement in Morocco. When the international conference of neutrals was called Spain sent as a delegate a former member of the cabinet who strongly favored this policy. On the other hand nothing showed definitely that the Spanish government itself was committed to it. In the French press some alarm was expressed at Spain's attitude. It was said that Tangier was only one point in the Mediterranean question which really involved the division of control over the Mediterranean countries between France and Spain.

CUSTOMS CHANGES. In December, a decree increased certain customs duties to a point that amounted to virtual prohibition and bore with especial severity upon French imports. It was taken as retaliation on the part of Spain for the French decision to tax foreign wines. The goods subject to this increase in Spain were especially those which France imported, as, for example, perfume, velvet, silk, fur cloaks, automobiles, etc. The measure occasioned much discontent among the commercial classes of France and it was criticised also in Spain as tending to increase the cost of living, which was already excessive. See NAVAL PROGRESS.

SPANISH. See PHILOLOGY.

SPANISH LITERATURE. The literary activity of Spain for the year has been greater than it was a year ago. The official figures in the *Bibliografía Española* for both years at the end of November (the last to reach us) were 1256 in 1919, and 1371 this year.

NECROLOGY. Once more death made heavy demands upon Spanish letters and scholarship, and again, as last year, the losses were more numerous in Spanish America. In the first place

we lost that towering figure, the genial Benito Pérez Galdós, whose keen vision and sympathetic heart had made him see and understand to their very depths most of the failings and qualities of his people. His literary work depicts all phases of Spanish life and consists of some twenty dramas, more than thirty novels, and forty-six volumes which he entitled *Episodios Nacionales*, five series each of which was to contain ten volumes. As he published the forty-sixth volume in 1912 it is very much to be feared that he did not complete the fifth series. As they stand they form a wonderful gallery of portraits of significant persons and incidents in the history of Spain from Trafalgar (1805) to Cánovas del Castillo (who was killed in 1897). The other Spanish loss was Mariano de Cavia, who, although elected to the Royal Spanish Academy in 1916, had never taken his seat. He was a consistent worker for purity of speech. The death of the poet and critic Enrique Fernández Granados (Perpetual Secretary of the Mexican Academy), deprived Mexico of one of her most gifted and influential writers. Argentina lost very heavily through the passing of her illustrious son Rafael Obligado, the poet of the *Gaucha*, and author of the *Tradiciones Argentinas*. Chile's loss of Manuel Antonio Román affects her journalism, lexicography, and poetry, since he was director of the *Revista Católica*, author of a *Diccionario de chilenismos* in five volumes (finished two years ago), and had translated into verse the *Tristia* of Ovid.

LITERARY CRITICISM in several forms is well represented: León de Corral, *Alvaro de Luna, según testimonios inéditos de la época* (interesting study concerning the favorite of Juan II); F. Fernández de Béthancourt, *Historia genealógica y heráldica de la monarquía, Tomo X* (posthumous publication of a work whose first nine volumes had been highly praised); H. Thomas' *Spanish and Portuguese Romances of Chivalry, the Revival of the Romance of Chivalry in the Spanish Peninsula, and its Extension and Influence Abroad* (very important re-examination of the subject); J. Alemany Bolufer, *Tratado de la formación de palabras en la lengua castellana*; N. Alonso Cortés, *Jornadas* (sundry articles) and *Zorrilla: su vida y sus obras, vol. III*; M. A. Caro, *Obras Completas, II* (ed. by V. E. Caro and A. Gómez Restrepo); J. Sejador y Frauca, *Historia de la lengua y literatura castellana, XII* (last volume and deals with regional and modernist movements); Carmen de Burgos, *"Figaro", (Revelaciones, "Ella" descubierta, epistolario inédito)*; Cervantes, *Rinconete y Cortadillo* (2d enlarged ed. by F. Rodríguez Marín), and *Comedias y Entremeses, V* (in the set of his *Obras Completas* published by R. Schevill and A. Bonilla y San Martín); P. Henríquez Ureña, *La Versificación irregular en la poesía castellana*; J. Ribelles Comín, *Bibliografía de la lengua valenciana* (work crowned by the Biblioteca Nacional); El Caballero Audaz, *Lo que se por mí* (Series 9 of these essays); Luis Vélez de Guevara, *El Rey en su imaginación* (ed. by J. Gómez Ocerín, as *Teatro antiguo español, vol. 3*); and R. Menéndez Pidal, *Un aspecto en la elaboración del "Quijote"* (presidential address to the Ateneo de Madrid), and *Estudios literarios* (reprint of several of his most important recent studies). Notable lexicographical contributions are: Real Academia Gallega, *Diccionario*

gallego-castellano, cuadernos 12, 13, 14; E. Constantino Guerrero, *Diccionario filológico, Estudio general sobre el lenguaje venezolano con referencia al de España y al de otros países de la América latina*; and F. Rodríguez Marín, *Un Millar de voces castizas y bien autorizadas que piden lugar en nuestro léxico*.

POETRY offered the following, among others (and it should be noted that the first four mentioned are the first poetic works of their respective authors): L. Felipe, *Versos y oraciones de caminante*; J. de Contreras, *Marqués de Lozoya, Poemas castellanos* (treating Segovian legends); F. Escrivá de Romaní, *Pomas maduras: Poemas*; and Lope Hernández, *Melancolías-Versos* (some of them mark him as of the school of Becquer). The genial Murcian poet Vicente Medina begins the publication of his *Obras completas*. Vol. 1, *Viejo Cantar*, contains some of his best work. Ricardo León published vol. 12 of his *Obras Completas: Lira de bronce*.

DRAMA presented a few good things but seems on the whole not to have been up to the standard of previous years. Arniches and Abati produced a bright comedy, *No te ofendas, Beatriz*; J. López Pinillos (Parmeno) won two successes with *El condenado* and *La red*. J. Fernández Villar was much applauded for his jocose comedy *Alfonso XII, 13; Cristobalón* by M. Linares Rivas was very well received; *Pedro Fierro* won a great triumph and makes one consider J. López Merino as a dramatist of much promise; C. R. Avelilla's play *El ocaso de los demonios* was successful, but missed the full value of its fundamental idea; vol. 27 of the *Teatro* of J. Benavente contains *La Vestal de Occidente*, *Una Señora*, and *Una pobre mujer*; the Alvarez Quintero brothers kept to their usual level, as witness *El mundo es un pañuelo* and *Malvaloca* (crowned by the Royal Spanish Academy with the Espinosa and Cortina prize); and J. J. López Marco gave us *Miss Cavell: Dama de la Cruz Roja* (an impressive drama in verse).

FICTION. Pío Baroja continued his *Memorias de un hombre de acción* with the volume *Los contrastes de la vida*; and in addition produced a volume of essays *Las ciudades—La sensualidad perversa*, and a discourse before the Junta de la Cultura Vasca, *Divagaciones sobre la cultura*. Others to be noted are: Espina Concha, *El metal de los muertos* (Novela), and *Pastorelas*; W. Fernández Florez, *Ha entrado el ladrón* (Novela), now in its third edition; G. Hernández Mir, *El patio de los naranjos* (Novela), which was awarded the Gregorio Pueyo prize; and B. Morales San Martín, *Obras Completas*, vols. I and II: *El ocaso del hombre* and *El enigma de lo imposible*, both symbolic novels. José Francés won new laurels with his volume *Cuentos del mar y de la tierra*. The novel *La Sirena Ciudad* of Andrés Peláez Cueto bears a prologue wherein Joaquín Alarcón gives interesting facts concerning the author's development. Gabriel Miro wrote *El humo dormido* (which has been very well received by the critics); and there is a second edition of a volume of Becquer's *Obras escogidas* published on the occasion of unveiling the monument of Becquer in Sevilla in 1911, with a preliminary discourse by the Alvarez Quintero brothers.

ROYAL ACADEMY activities, in the way of reception of new members, were greater than usual. Death has taken such heavy toll of

the Academy in recent years that there is an unusually large number of members elect. Of these, six qualified last year to take formal possession of their chairs. Gabriel Maura Gamazo, Conde de la Mortera, read his discourse *Algunos testimonios literarios e históricos contra la falsa tesis de la decadencia nacional*, and succeeded Julio Burell whose death occurred so soon after his election that he had never taken possession of his chair, a circumstance that made Maura Gamazo really succeed the illustrious José Echegaray (see YEAR BOOK, 1916). Manuel de Sandoval, the critic and lyric poet, read his discourse *De lo inconsciente y lo involuntario en las obras literarias y poéticas*, and succeeded to the chair recently vacated by Eduardo de Hinojosa, successor to Núñez de Arce. Emilio Gutiérrez Gamero, the novelist, succeeded Francisco Commellerán, his discourse being *La novela social*. In October the celebrated scientist Leonardo Torres Quevedo, succeeding Pérez Galdós, presented himself for admission, with a discourse on an *Unión internacional hispano-americana de bibliografía y tecnología científicas*, urging the preparation of a technological dictionary of Castilian. The dramatist Seraffín Alvarez Quintero entered in November, his discourse being *El diálogo en el arte dramático*. The last member to be received was Armando Palacio Valdés, elected fourteen years previously to succeed José María de Pereda.—The Academy awarded the "Piquer" prize for dramatic works for 1918 to *Esclavitud*, by J. López Pinillos, and for 1919 to Blasco Jimeno, by F. López Martín. Director Antonio Maura published his necrological discourse on Pérez Galdós, with an official list of all his works.

SPANUTH, AUGUST. German writer on music, died in Zurich, early in January. He was born in Brinkum, March 15, 1857. From 1886 to 1893 he lived in Chicago, teaching at the Musical College. For the next 13 years he was in New York as critic of the *Staats-Zeitung*. From 1906 he lived in Berlin as editor of *Signale für die musikalische Welt*.

SPIRITUALISTS' ASSOCIATION, NATIONAL. An association whose belief is that "spiritualism is the science, philosophy, and religion of continuous life, based upon the demonstrated fact of communication, by means of mediumship, with those who live in the spirit world." Incorporation took place in 1892 to organize the numerous local societies and to expand the movement. The Twenty-Eighth Annual Convention was held at Columbus, Ohio, in October, 1920. It was the largest and most enthusiastic gathering of that body yet held. Reports showed an excellent financial condition and great growth in membership of the subsidiary bodies. Most of the time was taken in considering a report of a committee on revision of the national constitution and by-laws. Many radical changes were made, including more stringent methods for the conduct of the auxiliaries and issuing of certified credentials to ministers, licentiates, healers, and missionaries. Ordination of ministers was given exclusively to the National body, after being recommended by the State Associations.

The bequest of an estate of possibly \$500,000 was made to the Association by John L. Jackson of Fort Worth, Texas. The case was taken to the Court of Appeals on the ground that mediumship is illegal by relatives of the deceased. The Association is vigorously defending its claims.

A widespread interest in spiritualism has been greatly aided by the lectures of Sir Oliver Lodge and the espousal of the cause by Sir A. Conan Doyle in England. The next convention will be held in Detroit, Mich., in October, 1921. Reports for 1920 show that there are in the United States more than 200 churches, about 550 ordained ministers, about 1700 mediums, and about 700,000 adherents. The officers in 1920 were: President, George D. Warne; secretary, George W. Kates; treasurer, Cassius L. Stevens. Headquarters are maintained at 600 Penna Ave., S. E. Washington, D. C.

SPITTELER, CARL. Swiss writer to whom the Nobel prize (of 1919) for literature was awarded in November. His writings, all in German, and not translated into English, include *Truths Spoken in Jest*; *My Experiences*; *Literary Reminiscences*, and the epic poems, *Prometheus and Epimetheus* and *Olympian Spring*. Spitteler was 75 years of age in the April preceding the award. See NOBLE PRIZE.

SPITZBERGEN. The status of this archipelago as a no man's land (*Terra nullius*) where neither security nor redress existed among the various international miners and trappers, has been finally remedied. A clause in the Russo-German Peace treaty of Brest-Litovsk indicated that both nations had certain claims to the possession of Spitzbergen. To adjust its status an international convention was called, in which participated Denmark, France, Great Britain, Holland, Italy, Japan, Norway, Sweden and the United States. The treaty awarding the sovereignty to Norway was signed by Great Britain, Feb. 16, 1920, and the signature of the other contracting parties were completed on April 9. It was hoped that ratification would be completed in time for Norway to assume entire control of the archipelago during the summer of 1921. The rights of mineral claims made by other nations are said to be conserved. In the summer of 1920 there were mined about 250,000 tons of coal. Great activity was exercised in erecting plants, machinery, buildings, etc. of modern types so as to facilitate the speedy and economical working of coal mines, and ensure the comfort of the miners. Norway sent during the year an expedition to make geological, hydrographical and topographical surveys to the south of Bell Sound. Dutch, British and Swedish expeditions also took the field to conserve and arrange for the exploitation of the mineral and other claims already located. Electric light systems have been installed to facilitate winter mining, since there are now permanent settlements near the mines. Wireless stations are to be built at Cape Bowman and at Green Harbor to keep the inhabitants in touch with the outside world. Few realize that Spitzbergen is accessible during the entire year, and is within two days steaming of Norway and of Scotland.

SPORTS. Articles covering the activities in the various sports during the year 1920 will be found under such titles as ATHLETICS, TRACK and FIELD, BASEBALL, FOOTBALL, GOLF, OLYMPIC GAMES, TENNIS, YACHTING, etc.

SPURGEON, WILLIAM PORTER. Editor, died, June 4. He was born at Norwich, England, Nov. 29, 1867; came to the United States in 1881, and was educated in public and private schools. From 1894 to 1913 he was on the *Washington Post*, being the editor of that paper

from 1907 to 1913. After that he was editor of the *Washington Herald*, 1914-16 and became again managing editor of the *Washington Post* in January, 1917.

SQUASH. See COURT TENNIS.

STANDARD OIL COMPANIES. See PETROLEUM.

STANDARDS, UNITED STATES BUREAU OF. The Bureau of Standards, of the Department of Commerce, during the fiscal year 1919-1920 passed from a war-time to a peace basis. The testing work carried out during the year was in some cases slightly less than during the war period but in general the volume of this work was not decreased to any extent, owing to the fact that while the amount of work for the military departments had been somewhat less, that for the industries had been very much greater. The total number of tests conducted during the year for the Government was 72,398, and the tests conducted for the public numbered 34,501 or a total number of all tests of 106,899. During the year the Bureau's staff comprised 381 statutory employees and 600 engaged in research and investigations specially authorized by Congress. The annual conference on weights and measures was held at the Bureau from May 24-27, and a number of important questions were discussed. Among the subjects of special interest were sales by net weight, standardization of various commodities in package form, and proposed legislation in reference to installation of testing gasoline measuring pumps. The work of the section devoted to the testing of internal combustion engines was considerably broadened during the year and included besides work with aircraft engines, various work in connection with automobiles and trucks of great value to manufacturers and users of automobiles. The manufacture of optical glass for certain of the other Government departments started during the war was carried on with satisfactory results. A large number of standard samples for reference work in laboratories was distributed and several new samples issued during the year.

An important investigation to determine the probable reason for the failure of freight car wheels in service was carried out for several months and it was expected that it would lead to material improvements in the manufacture of such wheels.

The results of the Bureau's activities during the year were partly shown in 106 new publications. These publications comprised 50 scientific papers giving results of new scientific researches, 37 technological papers dealing with practical applications of science in industrial fields and engineering, 16 circulars containing important compiled technical data of special use to the industries, especially to the scientific and industrial laboratories, and 3 miscellaneous.

STANDARD TIME. During the year Salvador adopted Standard Time, one hour slower than Washington, to take effect January 1, 1921. This gave Salvador the same time standard as other Central American States and also the Central United States, namely that based on a meridian of 90° Longitude West from Greenwich.

STARKIE, WILLIAM JOSEPH MYLES. British educator and author, died, July 21. He was after 1911 chairman of the Board of Intermediate Education. He was born at Sligo, Ireland, Dec. 10, 1860, and educated at Trinity

College, Cambridge, and Trinity College, Dublin; graduating with high honors. His publications include: Editions of Aristophanes with notes and translations and many contributions on classical subjects to the periodicals: *Recent Reforms in Irish Education* (1902); *Continuation Schools* (1912), etc.

STASNY, KARL RICHARD. American pianist and teacher, died in Roxbury, Mass., April 21. He was born in Mayence, March 16, 1855. From 1882-91 he toured Europe as a successful concert-pianist. In 1891 he settled in Boston as teacher at the New England Conservatory, where he remained till his retirement in 1918.

STATE BANKS. According to the United States Comptroller of the Currency the combined statements of State banks, savings banks, private banks, and loan and trust companies, to the number of 22,109, as of June 30, 1920 (or the dates nearest thereto), indicated an increase in the number of such banks, including scattered returns from private banks not under State supervision, of 771 banks over the number which reported on June 30, 1919. The aggregate resources of these banks on June 30, 1920, amounted to \$29,667,855,000, an increase during the year of 12.46 per cent, or \$3,287,355,000. The combined capital and surplus June 30, 1920, was \$2,902,435,000, while the capital and surplus on June 30, 1919, amounted to \$2,628,530,000. Loans and discounts aggregated \$17,171,090,000, an increase of more than \$3,000,000,000 over the year before. Other items of resources were: Investments (bonds and securities), \$7,201,060,000; cash on hand, \$628,027,000; checks and other cash items, \$450,257,000; due from banks, \$2,712,040,000. Capital stock paid in amounted to \$1,478,473,000. Total capital stock paid in, surplus, and undivided profits were \$3,331,908,000, as compared with \$2,972,000,000 the year before. Individual deposits were \$23,694,372,000.

The accompanying table gives the figures for the respective classes of institutions.

ies—and 12 private banks, with combined liabilities of \$44,287,000, excluding 7 whose liabilities had not yet been ascertained. The failures reported were distributed among 27 States. The number in each State was as follows:

Arkansas	4	Montana	1
Florida	2	Nebraska	2
Georgia	4	New York	2
Idaho	1	North Dakota	2
Illinois	4	Ohio	1
Indiana	3	Oklahoma	2
Iowa	3	Oregon	1
Kansas	3	Pennsylvania	1
Kentucky	1	South Dakota	2
Louisiana	1	Texas	5
Massachusetts	7	Utah	1
Michigan	2	Virginia	2
Minnesota	1	West Virginia	2
Missouri	6		

STATE DIRECTOR OF MUSIC. See *MUSIC, General News.*

STATISTICAL ASSOCIATION. AMERICAN. One of the oldest scientific associations in the United States having been organized in Boston, Mass., in 1839. Its objects are "to collect, preserve, and diffuse statistical information in the different departments of human knowledge." It has given much of its time to advisory work for Federal, State, and municipal bodies, with a view to improving the methods of collecting and presenting statistical data. In 1920, for example, it was engaged on a programme for rendering the Federal census of manufactures more generally useful, the nature and purpose of the plan being summed up as follows:

"The comprehensive census of manufactures taken by the government every five years is of comparatively little use to business in the United States. Preparation and publication of the elaborate report requires about two years. In their respective fields the Department of Agriculture and the Bureau of Mines have shown what can be done to furnish valuable data promptly. The American Statistical Association hopes to secure legisla-

RESOURCES AND LIABILITIES OF 22,109 STATE, SAVINGS, AND PRIVATE BANKS AND LOAN AND TRUST COMPANIES, JUNE 30, 1920
(In thousands of dollars)

RESOURCES	18,195 State banks	680 mutual savings banks	1,087 stock savings banks	1,408 loan and trust companies	799 private banks	Total, 22,109 banks

Other liabilities	324,469	8,869	8,250	353,475	3,488	698,501
Total liabilities	\$14,009,781	\$5,619,017	\$1,506,413	\$8,320,018	\$212,636	\$29,667,855

During the fiscal year ending October 31, 1920, it appeared that there were failures of 66 banks, other than national, including 54 State banks—45 commercial, 2 savings, and 7 trust compan-

ies by which the United States Census office may collect and analyze data regarding the continually increasing output of manufacturing plants of the United States. It would not be difficult to secure for key industries figures giving the number of units of output.

Totals expressed in units of quantity would be more significant and probably more reliable than figures expressing values only. The matter has been actively taken up with the officials of the Department of Commerce and of the Bureau of the Census. All those thus far approached have expressed themselves as generally in favor of the plan. It rests with the business men of the United States to act together to secure the necessary legislation. The executive officers of the Chamber of Commerce of the United States of America have been authorized by vote of the Executive Board to present this matter to the Bureau of the Census. It is expected that other influential organizations will also take an active part in this campaign."

Owing to the rapidly growing importance of business statistics the Association gave especial attention to the problems they presented and at the close of the year was engaged on a project for a Business Research Committee which should represent the Association in the various fields of trade associations, manufacturing, advertising, publishing, banking, trade, etc., with a view to promoting standards of business research.

The Association held its 82d annual meeting at Atlantic City, N. J., December 29-30. The papers read and matters discussed included the following subjects: Population and vital statistics; morbidity statistics in industry; office and field work of the Fourteenth Census; wage determination; industrial medicine; industrial education; index numbers; the national income and its distribution. The report of the joint committee on the Census was accepted and the Association approved its recommendation that the Bureau of the Census prepare and publish scientific analyses of the Census results in the form of scientific monographs on the important topics. A local section of the Association was established at Pittsburgh, Pa. in the course of the year. The total membership of the Association in December, 1920 was 988. Officers: President, Carroll W. Doten; Secretary-Treasurer, Robert E. Chaddock; Editor of the quarterly publication entitled *American Statistical Association*, William F. Ogburn.

STEAM ENGINE. With the high cost of fuel in 1920 the thoughts of steam engine designers and builders were turned toward securing increased economy and efficiency, though comparatively little was accomplished in the way of improved construction of the older types of engines. For larger units of course, the Steam Turbine (q. v.) was pre-eminent and the unaflo engine, called in England the terminal exhaust engine, was increasingly popular on account of its demonstrated economy. The first unaflo engine to be built in the United States was made in 1914 (see *YEAR BOOK* for 1914 and 1916), and since that time the type found an ever increasing vogue. As much of the moisture in the expanded steam was eliminated at the end of the working stroke and before compression began, and as through the terminal exhaust slots and the piston acting as a valve and large size, almost full vacuum could be obtained with the least possible back pressure in the case of a condensing engine, there resulted a substantial economy. In other words the steam could be compressed to boiler pressure with a minimum amount of work expended during such compression. The first uses of the unaflo engine in the United States were to drive electric generators, or in other services where constant speed governing was essential, but in 1920 variable speed engines were built suitable for pumps or other purposes supplied with heated

cylinder heads. The first unaflo engine thus to be used had a single steam cylinder connected to a single double acting water cylinder, while two units were also placed to work in one shaft with a 90 degree crank. The result of using the unaflo system in pumping units was to secure a high piston speed much greater than ever before obtained. Unaflo direct-connected air compressors and ammonia compressors were built in 1920, and one installation of novel design consisted of six unaflo engines operating in pairs driving exhausters and controlled by a vacuum in the suction pipe. Furthermore the unaflo principle was applied to a marine engine and the first reversing engine on this system to be built in the United States showed a valve motion quite different from any employed in the European reversing engines. This marine engine made use of a modified form of valve motion which had been developed specially for the variable speed engines. In general this comprised a long revolving cam straight on the face but tapering on the back. The cam shaft could be moved along endways to vary the cut-off. In the marine engine valve motion the cams were arranged in steps with backing cams in the same shaft as fine variations in cut-off were not required.

The reciprocating engine which many authorities believed to be more efficient than the steam turbine up to 1500 horsepower was coming in for more attention, as with the high cost of fuel many elements that once were neglected were found worthy of consideration.

In the 1917 census of central electric light and power stations issued by the BUREAU OF THE CENSUS it was interesting to note that practically all the steam engines in both commercial and municipal stations were to be found in the lowest group, namely "500 hp. or under," and the average size of these machines was well under 200 hp. The decrease in the number of these small machines was particularly marked for commercial plants, from 4535 in 1907 to 3253 in 1917, accompanied by decrease in horsepower rating from 781,673 to 593,538. On the other hand, municipal plants reported an increase in number of units in this small-sized group from 1648 in 1907 to 1947 in 1917, with a corresponding increase in horsepower rating from 236,893 to 313,419. In the group between 500 hp. and 2000 hp. there was some decrease both in number and horsepower of engines reported by commercial stations. In the next group 2000 hp. to 5000 hp., while there was a slight decrease in number of units and rating subsequent to 1912, there was actually a considerable increase in both since 1907. For engines over 5000 hp. there was very little change and municipal plants had at no time any steam engines with a capacity as high as 2000 hp.

Obviously there had been a decrease in the number and capacity of the steam engines used in central power stations, for while in 1907 from a total rating of 1,810,040 horsepower in use 798,025 horsepower were produced by steam turbines, while in 1917, out of 8,449,076 total horsepower 1,701,677 was produced by steam engines. In 1920 it was estimated by the *Electrical World* (New York) that out of a total of 11,476,000 horsepower then installed in central stations, 1,781,100 horsepower or 15.5 per cent was produced by steam engines and 9,695,500 horsepower or 84.5 per cent by steam turbines. See **STEAM TURBINES.**

STEAM TURBINES. Progress in the design and construction of steam turbines in 1920 involved improvement of details and attempts to secure increased efficiency stimulated not a little by the prevailing high costs of fuel. Longer life through improved design and better operation also were sought during the year. Notable performances of turbines both large and small cited by Professor A. G. Christie of the Johns Hopkins University, and published in the *Annual Review* number of *Power* (New York) were those of a 25,000 kw. General Electric Turbine, an English 1500 kw. Brush-Ljungström turbine, and a 1000 kw. Allis-Chalmers. The 25,000 kw. machine installed at the West End Station of the Union Gas and Electric Co., at Cincinnati, operating with 234 lbs. gauge pressure, 595° Fahrenheit temperature, 1145 inch absolute exhaust pressure, and with a steam consumption of 10.46 pounds per kw.-hr. at 20,708 kw. load showed an efficiency ratio referred to electric horsepower of 77 per cent. The 1500 kw. Brush-Ljungström turbine at 1460 kw. showed an efficiency ratio of 67.9 per cent referred to electrical horsepower with 208 lb. gauge, 583 degrees Fahrenheit temperature, 0.68 lbs. absolute exhaust pressure, and steam consumption of 12.42 lbs per kw.-hr. The Allis-Chalmers 1000-kw. turbine operating at 1016-kw. load, 130 lbs. gauge, 99.4 per cent quality, 2.49 inches absolute exhaust pressure, had a steam consumption of 16.83 lbs. per kw. hr. or an efficiency ratio of 66.2 per cent.

It was the opinion of many mechanical engineers that the limit of size in large turbine units had not been reached in 1920, through manufacturers were not turning out during the year any turbines of unusual size or design. The largest units in use were the 60,000 kw. Westinghouse three-cylinder sets, while the largest single rotor turbine was the 45,000 kw. General Electric unit at the Detroit Edison Co. It was believed that a development of the near future would be the building of turbine units of 100,000 kw. for some of the larger power plants. There were put in operation during the year the following notable stations: The Springdale station of the West Penn Power Co. with 20,000 kw. Westinghouse units; the Delaware station of the Philadelphia Electric Co. with 30,000 kw. General Electric turbines; the West End plant of the Union Gas and Electric Co. of Cincinnati, with 25,000 kw. General Electric turbines, and the 60,000 kw. Westinghouse units at the Cheswick Power Co., Cheswick, Pa.

The new work of the year either designed or in course of construction included the Meadows Station of the Hartford Electric Light Co. with 20,000 kw. units; the Calumet Station of the Commonwealth Edison Co. of Chicago with 35,000 and 30,000 units, and the Hell Gate Station of the New York Edison Co. with 35,000 kw. units. Other units of varying sizes were being installed at different power stations during the year.

There was considerable development in progress both as regards detail and major principles. A mercury-turbine set developed by the General Electric Co. was under construction for installation upon a commercial scale by the Hartford Electric Light Co. so that it might receive a thorough trial. In England development work was being pushed to secure special steam turbines of 1000 hp. and above, for airplane and

airship service, but the problems of the condensers for such machines were giving trouble. A recent and successful practice was to connect steam turbines by reduction gears with efficient multi-stage centrifugal pumps. One of these of 1225 horsepower capacity at Baltimore performed satisfactorily an official test while even larger turbo-pumping sets were being built for Philadelphia. Improvements, though not radical, were to be noted during the year in the steam turbines installed on shipboard both for reduction gears and for electric drive. One of the foremost was securing more accurate tooth-cutting for the gears.

DEVELOPEMENT OF THE USE OF STEAM TURBINES. The 1917 census of central electric light and power stations issued by the Bureau of the Census stated that the total rating of all central-station steam-power equipment in 1917 was 8,449,076 hp., of which 1,701,677 hp. was credited to steam engines and 6,747,399 hp. to steam turbines. In 1907 the total rating of steam engines was 1,810,040 hp. and only 798,025 hp. was credited to steam turbines. According to statistics compiled by the *Electrical World*, the total installed steam power equipment in 1920 was 11,476,000 hp., of which 15.5 per cent or 1,781,100 hp. was credited to steam engines and 84.5 per cent or 9,695,500 hp. to steam turbines. These data indicated that since 1917 steam engines had increased by only 79,423 hp. while steam turbines increased 2,948,100 hp.

The *Electrical World's* statistics for 1920 indicated that New York led in steam turbines with 1,335,000 hp., followed by Pennsylvania and Ohio with 1,062,100 hp. and 1,050,000 hp. respectively. Those states reporting the greatest steam engine rating in 1920 were Pennsylvania, Illinois and Ohio, all of which report more than 100,000 hp. The states of Pennsylvania, New York, Illinois, Ohio and Massachusetts reported in 1920 a total of 5,555,900 steam horsepower, equivalent to 48.5 per cent of the total rating of steam engines and turbines in the United States.

According to the census report already quoted an interesting development in this field was the growth in horsepower capacity of steam turbines. In both privately owned and municipal stations these turbines were found to be most numerous in the group between 500 and 2000 hp.—598 or 40.2 per cent of the total for commercial plants and 106 or 50.2 per cent of the total for municipal plants. The municipal plants also reported the greater part of their steam turbine rating 40.9 per cent of the total in this group. Commercial stations, on the other hand, exhibited a rapid increase in the number and the rating of turbines of the larger capacities until in 1917 of the total horse power 76.1 per cent was furnished by these larger units, which average 13,105 hp. per turbine, as opposed to an average of only 6,318 for steam engines in this group. There was during the period from 1907 to 1917 a rapid increase in the size of steam turbines directly connected to generators, and by 1920 units of 40,000 to 60,000 hp. were not uncommon.

STEEL. See IRON AND STEEL.

STEELE, SANFORD H. Financier, died at Pinehurst, N. C., December 19. He was born at Stanstead, Canada, November 26, 1847; graduated at Dartmouth College in 1870 and practiced law in New York City. He became inter-

ested in the affairs of the General Chemical Company, of which he was counsel, and he was made president of the company and held the office for many years.

STETSON, FRANCIS LYND. Lawyer, died in New York City, December 5. For many years he was one of the leading lawyers in the city of New York. At one time he was partner of Grover Cleveland and was organizer of the United States Steel Corporation of which he was general counsel from the beginning. He was born in Keesville, N. Y., April 23, 1846; graduated at Williams College in 1867; studied law at the Columbia Law School and was admitted to the bar in 1869. Among the important corporations on which he served as counsel were the Northern Pacific Railway, International Mercantile Marine Co., Erie Railroad, United States Rubber Co. and Southern Railway. His practice began in New York City in 1870 and he was appointed assistant corporation counsel to Mr. William C. Whitney, when the latter was at the head of the city's legal department. On leaving this office, he became an attorney of the firm of Bangs and Stetson. He was the adviser of Mr. J. P. Morgan on the occasion of the latter's loan to the government and he was counsel to Samuel J. Tilden in the Tilden-Hayes controversy. For many years he was an influential figure in the Democratic party and until the late Joseph H. Choate reached the height of his career, he was probably the best known lawyer in New York City.

STEVENS, GEORGE WALTER. Railroad president, died, August 18. He was born at Utica, Ohio, Nov. 3, 1851; and entered the railway service in 1864, working on various lines and rising to the position of general manager in 1891. After Feb. 1, 1900, he was president of the Chesapeake and Ohio Railway, and he also became president of the Hocking Valley Railway and the Wellston and Jackson Belt Line.

STEVENS, ISAAC NEWTON. Lawyer, died February 11. He was born at Newark, Ohio, Nov. 1, 1858. He taught school in Ohio and Illinois, and after studying law began practice in Denver, Colo., in 1880. He was district attorney of the State in 1888-92 and tried many famous cases. He was afterwards editor and proprietor of several Colorado newspapers. For six years he was chairman of the Republican City Committee of Denver. In 1912 he was the Progressive party's candidate for the United States Senate. In 1913-15 he was city attorney of Denver. After 1915 he was president of the Commonwealth Casualty Company of Philadelphia. He was one of the pioneers in the introduction of beet sugar industry into Colorado. He wrote the *Liberators* (1908); *The American Suffragette* (1911); and *What is Love?* (1917).

STEVENS INSTITUTE OF TECHNOLOGY. A non-sectarian institution for the technical education of men at Castle Point, Hoboken, N. J.; founded in 1870. There were 862 students enrolled for the fall session of 1920. There were 48 members of the faculty. In the course of the year eight instructors resigned and one died (Leo Joseph Costello); and thirteen new instructors were appointed. The endowment funds amounted to \$1,530,000 and the income for the year was \$263,167. The library contained about 16,000 volumes. Four scholarships were endowed, amounting to \$40,000, in memory of the men of Stevens who died in ser-

vice during the World War. Two brick barracks buildings which were purchased from the United States Government were being altered for further needs of the Institute to meet the increased attendance. One-half of the larger of the two buildings was to house the Department of Electrical Engineering.

STOCK-RAISING. See LIVE STOCK.

STOCKWELL, JOHN NELSON. Astronomer, died, May 18. He was born at Northampton, Mass., April 10, 1832, and educated in the common schools of Ohio. He distinguished himself by original researches in astronomy and he wrote a large number of astronomical works, including *Theory of the Moon's Motion*, (1891); *Eclipse Cycles*, (1901); *Theory of Planetary Perturbations*, (1904); and in addition, various mathematical works, including elaborate tables for the computation of ocean tides, in 1919.

STOKES, Sir GABRIEL. British civil official, died at the beginning of November at Dublin, Ireland. He was born, July 7, 1849 and educated at Kilkenny college, and at Trinity college of Dublin. Entering the Indian civil service in 1871, he became after some years revenue secretary to the Madras government and was chief secretary in 1898-1903. In 1906 he acted as governor of Madras and he was a member of the Council, 1903-8. He was prominent in philanthropic work, and especially in the Society for the Prevention of Cruelty to Children.

STONE. According to the United States Geological Survey, the quantity of stone sold in the United States in 1919 for different uses amounted to about 71,380,000 short tons, an increase of 4 per cent over the quantity sold in 1918 but considerably less than that sold in 1917. Increases were recorded for most of the products whose output was curtailed during the war, but decreases were made for the most urgent war products—flux, refractory materials, and limestones for use in manufactures, the quantity of flux decreasing 25 per cent. The total value of the stone sold in 1919 was about \$115,000,000, far in excess of any value previously recorded. Record values were made by granite, basalt (trap rock), marble, limestone, and miscellaneous stone, and the value of the sandstone sold exceeded that for any year since 1914. This unusual increase in the value of the products of the stone industry, like the increase in the value of the products of other industries, is attributed to the larger cost of supplies, fuel, and especially of labor. The producers reported that business was poor during the first part of the year but gradually improved until, during the last six months, the demand exceeded the output that could be made with the insufficient and inefficient labor available.

STONE, WILBUR FISK. Lawyer, died at Denver, Colo., December 27. At one time he had been a justice of the Colorado Supreme Court. He was born at Litchfield, Conn., in 1833 and went to Colorado in 1860. From 1891 to 1904, he served as one of the judges of the United States court of Mexican and Spanish land grant claims. He edited newspapers in Evansville, Ind., and Omaha, Neb., and was the first general attorney of the Denver and Rio Grande railroad.

STONE, WILLIAM ALEXANDER. Former governor, died, March 1. He was born at Delmar, Pa., April 18, 1846 and served in the Pennsylvania volunteers in the Civil War. Admitted

to the bar in 1870, he practiced at Wellsboro, Pa., till 1877, after which he practiced in Pittsburgh. He was United States District Attorney of the western district of Pennsylvania, 1880-6 and member of Congress, 1891-9. He was elected governor for the term, 1899-03 and after holding that office, became prothonotary of the Supreme and Superior Courts of Pennsylvania. In politics he was a Republican.

STRAITS SETTLEMENTS. A British crown colony in Malaysia, comprising Singapore, Penang, and Malacca, whose area and population are distributed as follows:

	Sq. M.	Pop. 1911	Pop. 1919	Capital
Singapore	807	311,985	387,336	Singapore
Penang	571	278,003	305,139	Georgetown
Malacca	720	124,081	153,008	Malacca

Under the administration of the Straits Settlements are the Cocos Islands, Christmas Islands and the colony of Labuan. The leading city and one of the most important ports of the East is Singapore which contains the greater part of the population of the island of Singapore. The predominant racial element is the Chinese who numbered 274,574 and the natives of India, 94,213. The great bulk of the rubber production originates in the Malay Peninsula. The Straits Settlements colony derives its importance as a market for plantation (or Para) rubber from the fact that practically the entire rubber trade of the Federated and Non-Federated Malay States is conducted through its ports, Singapore and Penang, and is included on this account in the trade statistics of the colony. As illustrating the development of the rubber industry, it only needs to be mentioned that the Malayan exports of this product increased from 430 tons in 1906 to 108,305 tons in 1918, and the value from \$1,200,000 to \$87,758,729. The foreign trade of the Straits Settlements for 1919, amounting to \$936,150,778, increased \$206,997,475 over that of the preceding year. Imports totaled \$460,515,189 in 1919 and \$383,199,723 in 1918; exports reached \$475,635,589 in 1919 and \$345,953,580 in 1918. These figures represent goods bought for consumption and exports into the market of each settlement from foreign countries and other parts of the colony, but they do not include trans-shipments. Live animals, food, drink, and narcotics imported into the Straits Settlements in 1919 were valued at \$164,783,101 and in 1918 at \$133,694,123. Similar exports totaled \$127,920,159 in 1919 and \$108,609,960 in 1918. Import values of raw materials were recorded for 1919 as \$215,541,443 and for 1918 as \$179,127,932. Exports under this heading in 1919 were worth \$286,363,051 and \$195,799,108 in 1918. The budget for 1919 was as follows: Revenue, \$34,108,465; expenditure, \$34,901,233. Governor and commander-in-chief in 1920, Sir Lawrence N. Guillemard.

STREETS. See ROADS AND PAVEMENTS.

STRIKES AND LOCKOUTS. Official data for strikes and lockouts in the United States, during the calendar year 1919 were not complete in time for publication in the preceding **YEAR BOOK**, and are therefore presented here as compiled by the *Labor Review*:

In 1919 there were nine disturbances in each

of which 60,000 or more persons were directly concerned: A general strike in Tacoma and Seattle in February in sympathy with the metal-trades strikers, in which 60,000 persons were involved; 65,000 employees in the Chicago stockyards struck in August; 100,000 longshoremen along the Atlantic coast struck in October; 100,000 employees in the shipyards of New York City and vicinity struck in October; 115,000 members of the building trades were locked out in Chicago in July; 125,000 in the building trades in New York City struck in February; 250,000 railroad shop workers struck in August; 367,000 iron and steel workers struck in September; and 435,000 bituminous coal miners struck in November. The number of persons concerned in these nine strikes and lockouts was upward of 1,600,000, while the total number of persons involved in strikes and lockouts during 1919 was 4,112,507. The strikes of 1919 were not accompanied by the violence and loss of life that at times characterized the strikes of former years, owing perhaps to the fact that employers more frequently closed their establishments during the strike, and employed strike breakers in a less number of cases. On the other hand, the number of working days lost in 1919 increased greatly and the average duration of strikes was nearly twice that in each of the preceding three years. It is difficult to particularize, for many of the strikes involving a few thousand persons caused the public more inconvenience than some of those involving many times that number. Many of the larger strikes occurred in New York City and vicinity, where, in addition to those already mentioned, 35,000 waist and dress makers struck in January, 50,000 cloak and suit makers in May, 25,000 shirt makers in July, 50,000 men's clothing workers in October, 16,000 millinery workers in September, 10,000 rag pickers and paper sorters in March, as many paper box makers in August, and as many pressmen in October, 14,000 painters in August, 15,000 shoe workers in February, 15,000 street car men in August, 16,000 marine workers in January, 17,000 harbor workers in March, 18,000 teamsters in October, 20,000 longshoremen in March, 25,000 ship-builders in November, 40,000 tobacco workers in July, and 40,000 tug and ferrymen in October. In March, 12,000 woolen operatives struck in Passaic, 24,000 silk workers in Paterson in February and 17,000 again in August, 32,000 textile workers in Lawrence in February, 30,000 in New Bedford in May, and 35,000 in Fall River in December. In July, 40,000 marine workers along the Atlantic coast struck, 20,000 meat cutters in cities along the Atlantic coast in August and again in October, 12,000 telephone operators in New England in April, 15,000 street railway men in Chicago in July, 10,000 building laborers in Chicago in June, followed by 13,000 carpenters in July, 15,000 carpenters in Columbus, Ohio, in May, 17,000 machinists in Toledo in May, 15,000 miners in Illinois in July, 10,000 railroad shopmen in western Pennsylvania in October, 15,000 steel workers in Pennsylvania in July, 43,000 anthracite miners in Pennsylvania in September, 10,000 tobacco workers in Philadelphia and 11,000 in Allentown in July, 15,000 in Porto Rico in January, and as many more in Tampa in October, 10,000 men in the building trades in Dallas in June, 28,000 metal workers in Seattle in January, and 25,000 workers in the shipyards of San Francisco and vicinity.

ty in February and 40,000 more in October. The following table shows the number of strikes and lockouts in the country in 1916, 1917, 1918, and 1919:

Year	Number
Strikes:	
1916.....	3,681
1917.....	4,324
1918.....	3,232
1919.....	3,253
Lockouts:	
1916.....	108
1917.....	126
1918.....	105
1919.....	121

STRIKES IN 1920. Returns for the last six months were not available at the close of the year. Heavy losses resulted from the railway strike in April on the part of men outside the old organizations and known in the press as "outlaws." It began April 2, when about 700 switchmen and yardmen on the Chicago and Milwaukee railway quit work, and spread rapidly in a few days, seriously affecting most of the lines of the country. Trains in some instances were abandoned *en route* and there were cases of violence reported. It was condemned by the presidents of the four great railway brotherhoods April 9 as an illegal movement on behalf of the "One Big Union" and having nothing to do with wages. The government arrested twenty-three of the leaders, April 15, on the charge of violating the Sherman and Lever acts. After the roads decided to declare the places vacant and to recruit new operatives most of the men went back to work. The freight congestion caused by the strike at certain points was not relieved for several weeks. The Railroad Labor Board appointed by the President, April 13, refused to hear the pleas of the "outlaw" strikers. For the wage award of the Railroad Labor Board see article RAILWAYS. The strike of the longshoremen of New York and other coast cities in the autumn of 1919 did not result in any increase of wages to the coastwise men, while the others received 80 cents an hour and \$1.20 for overtime by the award of the National Adjustment Committee. The coastwise men at first submitted but early in March struck for 80 cents an hour. In New York City the attempt was made to resume work by means of non-union men, but the checkers, weighers, freight-handlers, and truckmen uniting in a Transportation Trades Council refused to handle the non-union goods. The New York Merchants' Association thereupon set on foot an independent trucking system. The question of legality was raised in respect to the refusal of non-union goods, and a decision of a justice of the New York Supreme Court declared in effect that a boycott of open-shop merchandise was a "conspiracy against the public." The American Federation of Labor promised aid to the men of whom about 20,000 were reported to be out of work in June. In June, members of the New England Workers' Association, an organization of brassworkers not affiliated with the Federation of Labor, went on strike for 75 cents instead of 45 cents an hour for unskilled labor. About 20,000 were said to be involved and bomb-throwing and riots accompanied by loss of life were reported. Down to June, rough estimates place the number of men out of work as the result of strikes at 273,643, and the

amount lost in wages at over \$28,000,000. During these first six months the majority of workers affected were in New York, Massachusetts, and Illinois. The temporary injunction secured by the Michaels, Stern Co. of Rochester against the Amalgamated Clothes Workers in October, 1919, was made permanent June 10, 1920, and at the same time the court awarded the company \$100,000 for damages caused to its business by the union's activities. The strike had followed the company's refusal to recognize this union as representative of its employees. The American Garment Workers and the American Federation of Labor had supported the Company.

GREAT BRITAIN. The number of trade disputes in Great Britain causing stoppages of work, reported to have begun in 1920, was 1,715, "the highest total recorded for any year," according to the official Labor Gazette. The total number of workpeople involved in these disputes (including those thrown out of work at the establishments where the disputes occurred) was about 1,930,000, and a further 90,000 were involved in disputes in progress in 1920 which began in 1919. The aggregate loss of working days in all disputes in 1920 was about 27,000,000. These totals were smaller than those for 1919, but the number of workpeople involved was greater than for any year prior to 1919, and the aggregate loss of working time shown was greater than in any year except 1912 and 1919. See GREAT BRITAIN.

STRONG, EDWIN ATSON. Physicist. died February 4. He was born at Otisco, N. Y., January 3, 1834; graduated at Union College in 1858, and after teaching school at Grand Rapids, Mich., became superintendent of the public schools there. After 1845 he was head of the department of physics at the State Normal School at Ypsilanti, Mich. He was prominent in work for the promotion of science and education in Michigan during a period of nearly sixty years, and was the author of many pamphlets on scientific and educational subjects, besides various laboratory manuals.

STRONG, Sir THOMAS VEZEY. Former Lord Mayor of London, died in London October 3rd. He was born in London in 1857 and became the head of a prominent firm of wholesale paper manufacturers. Though active in the cause of temperance he was not conspicuous in political affairs until 1897 when he was elected alderman. He took an active part in the affairs of the city and became an effective speaker. He was Lord Mayor in 1910-11 and during his administration participated in many important public ceremonies. His chief administrative work was the fusion of the city parishes into the corporation for the purpose of rating and valuation.

STUART, Sir THOMAS ANDERSON. Scottish-Australian physiologist, died February 28. At the time of his death he was professor of physiology in the University of Sydney, New South Wales and dean of its medical faculty. He was born at Dumfries, Scotland, June 30, 1856 and educated at the University of Edinburgh, where he graduated with high honors and at the University of Strassburg. He became president of the Royal Medical Society in Edinburgh in 1882. Removing to Australia he was twice president of the Royal Society of New South Wales and a member of the medical board of New South Wales and held other important offices in his profession including the presidency of the Health

Society. He was also president of the Zoölogical Society and he organized the Royal Society Expedition to Funafuti in proof of the Darwinian theory in respect to the formation of coral reef. He took a leading part in the promotion of the existing public health system in North South Wales and in various other medical and sanitary improvements; and he was one of the founders of the Australian Institute of Medicine. His publications were generally contributed to the scientific journals on anatomical and physiological subjects. He was president of the British Emigration League of Australia.

STUCK, HUDSON. Archdeacon of the Yukon and mountain climber, died at Fort Yukon, Alaska, October 10. To him was given the credit of being the first white man to climb to the summit of Mt. McKinley. He was born in England, Nov. 11, 1863, and educated at Kings College, London, but removed to the United States, and studied at the University of the South, Sewanee, where he graduated in theology, in 1892. He taught school in Texas where he became rector at Cuero and was subsequently dean of St. Matthews Cathedral at Dallas, 1894-1904. In the following year he went to Alaska on foot or carried by dogs and he gave an account of his experiences and observations in his writings. In March, 1919, he received special honors from the Royal Geographical Society in recognition of his work as a traveler and mountain climber. His writings include *The Ascent of Denali* (Mt. McKinley, 1914); *Ten Thousand Miles With a Dog Sled* (1914); and *Voyages on the Yukon and its Tributaries* (1917).

STYRIA. A crownland of Austria before the downfall of the Austro-Hungarian Empire; incorporated in the new state of Jugo-Slavia (q. v.). Area, 8,862 square miles; population, Dec. 31, 1910, 1,441,157, of whom 70.5 per cent spoke German, and 29.37 Slovenian. Capital, Graz, with an estimated population of 156,500.

SUBMARINE BOATS. See BATTLESHIPS AND OTHER WAR VESSELS.

SUBWAY SYSTEMS. See RAPID TRANSIT.

SUDAN, ANGLO-EGYPTIAN. An African territory under British authority lying between Egypt and Uganda, and extending from the Red Sea to the limits of Wadai in Central Africa. Capital, Khartum. Area, about 1,041,400 square miles; population estimated in 1917 at 3,400,000. The chief towns are Khartum (16,325); Omdurman (84,022); Khartum North (10,828). Reported values of imports and exports in 1918 were respectively, £E4,024,582 and £E3,923,771. Revenue and expenditure according to the budget estimates of 1919 were respectively £E2,992,793 and £E2,720,513. Total length of railways, about 1500 miles, including the line from Cairo, via Khartum to El Obeid, and the Nile and Red Sea railway from Port Sudan to the mouth of the Atbara river. Governor-general and Sirdar in 1920, Major-general Sir L. O. F. Stack. See EGYPT.

SUGAR. The year 1920 was a remarkable one in the history of the sugar business, particularly as to the high prices reached and the rapidity with which the advance occurred and then declined. While Government control was not exercised in 1920 the Lever Act was still in force. Reports of a shortage prevailed in the spring, and although at no time did users

in the United States go without the necessary supply, previous experience led to efforts to provide against a contingency. In Europe sugar continued to be rationed and prices ruled high (See also FOOD and NUTRITION.)

The sugar crop of the world in 1920, according to estimates of Willett and Gray, amounted to 12,692,900 tons of cane sugar and 4,625,000 tons of beet sugar, a grand total of 17,317,900 tons. While this represents an increased production of 2,093,995 tons over the preceding year, it is approximately a million and a half tons smaller than the pre-war production. This decline is mainly in beet sugar. While the United States has shown a gain of nearly 50 per cent in beet sugar since prior to the war, Europe has not yet recovered half its former production, although in 1920 a very material advance in that direction was made. The total European sugar beet crop was estimated at 3,640,000 tons as compared with 2,803,480 tons in 1919-20, 3,183,188 in 1918-19, and 8,475,000 in 1913.

The sugar crop in the United States was a large one. The sugar beet crop was a third larger than the largest ever before recorded, and indicated a production of 1,109,609 short tons of beet sugar as compared with a five-year average (1914-1918) of 788,617 tons. Colorado led in manufacture in 1920, followed by Michigan, California, Utah, Nebraska, Idaho, Ohio, and Wisconsin, in the order named. The cane sugar acreage and production of Louisiana were considerably above 1919, but the yield per acre brought the total down to 186,000 tons as compared with a five-year average of 241,720 tons. The maple sugar crop amounted to 18,187 tons, or somewhat less than in 1919.

The total production of cane sugar in the United States, including Porto Rico, Hawaii, and the Virgin Islands, was 1,153,460 tons; that of Cuba 4,000,000 tons; the British West Indies, 186,500 tons; the French West Indies, 45,000 tons; San Domingo, 189,000 tons; and Mexico, 100,000 tons. The estimate for some of the other leading countries was as follows: Demarara, 100,000 tons; Central America, 35,000 tons; Peru, 350,000 tons; Argentina, 225,000 tons; Brazil, 300,000 tons; Philippine Islands (exports), 300,000 tons; British India (consumed locally), 3,000,000 tons; Java, 1,515,000 tons; Formosa and Japan, 350,000 tons; Australia and Fiji Islands, 235,000 tons; Egypt (consumed locally), 80,000 tons; Mauritius, 250,000 tons; Natal, 100,000 tons; Reunion and Mozambique, 40,000 tons each.

The decline in prices left Cuba in such financial condition that in October a moratorium decree was issued to run for fifty days, and then extended, in order to relieve the banks, but it had the effect of practically paralyzing business. A large loan from the United States was contemplated but difficulties arose in the way of carrying this out and at the close of the year the condition was serious.

Following up the interest in sugar production in England, a beet sugar factory is being erected on the the Kelham estate in Nottinghamshire, the government having agreed to take an equal number of shares with the public, up to £250,000, in the company formed to control the enterprise (Home Grown Sugar, Ltd.).

SULLIVAN, ROGER C. Politician, died April 14. He was born at Belvidere, Ill., Feb. 2,

1861, and educated in the public schools. For many years he was political leader in Chicago, having been in 1890 a member of the Cook County Democratic Committee, and from 1904 to 1916 member of the Democratic National Committee. He was president of the Ogden Gas Company of Chicago.

SUN. See ASTRONOMY.

SUNDAY SCHOOL UNION, AMERICAN. This is a volunteer association founded in 1817 of members of different denominations whose purpose is to teach Christian truths, especially to the young. Work is carried on throughout the United States in organizing Sunday schools, and distributing religious books and magazines. During the year ending March 1, 1920 the one hundred and third annual report shows that 840 schools were organized, 724 schools reorganized, 2934 schools aided, 176,566 families visited, 18,449 sermons delivered, 7804 children brought into existing schools, 4,358 professed conversions, 242 prayer meetings established, 92 Young People's Societies formed, 161 preaching stations opened, 38 churches organized, 17 churches built, books and periodicals to the value of \$21,748.61 sold, and to the value of \$3,244.72 given away. During the year the total circulation of periodicals has been 1,831,596 of which 100,000 were manufactured especially for use by soldiers and sailors, as against 250,000 for the previous year. The general circulation is somewhat less than the previous year due to the closing of the schools during the influenza epidemic. The Union has found it hard to obtain men to go out to act as missionaries and for this reason the work has been somewhat hampered. Further information may be obtained from the annual report. The officers for 1920 were: President, Martin Luther Finckel; recording secretary, William H. Hirst; treasurer, John E. Stevenson; and educational advisor, George A. Barton. National headquarters are maintained at 1816 Chestnut St., Philadelphia.

SUPAN, ALEXANDER. See METEOROLOGY.

SURGERY, PROGRESS IN. There were no great advances in surgical science or practice during 1920 and the reader is referred to the articles Anemia, Surgical Treatment of; Cancer; Radium, etc, for surgical subjects of interest. The use of radium in cancer is spoken of as radiosurgery, just as radioactive beverages such as are used in gout, and inhalations of radium emanation are spoken of as radio-medicine. The reader is also referred to the articles under Surgery in the Year Book for 1919 and 1918. The vast body of surgical knowledge which should have accrued during the war and its influence on the civil surgery of today are chapters which are yet to be written. There was a tremendous activity in capital surgery which began about 1875 as a result of the introduction of sepsis and persisted for many years but now shows signs of slowing down and giving place in part to milder measures. This is due partly to the introduction of radium, X-rays, and electro-coagulation, in part to increasing proficiency in operating through the natural passages without the necessity of cutting operations, and to a further large extent to the use of serums and vaccines and certain drugs. Gangrene of the lung was once looked on as a condition for the knife, but recently it has been successfully

treated with the injection of antiseptic solutions directly into the deep air passages combined with the use of a special serum. Abscess of the liver, once a surgical affection pure and simple, is sometimes cured by the drug emetine. In the realm of major surgery the most remarkable innovation of recent times seems to have been the cure of a case of angina pectoris by resection of the cervical portion of the sympathetic nerve.

SUTTON, CHARLES WILLIAM. British librarian and author, died, April 24. He was born at Manchester, April 14, 1848 and for many years was librarian of the Manchester public free libraries. He was prominent in various literary and antiquarian societies and wrote works pertaining to Lancashire, biography and local history. He contributed many articles to Leslie Stephen's *Dictionary of National Biography*.

SWAMP FEVER. See VETERINARY MEDICINE.

SWARTHMORE COLLEGE. A non-sectarian co-educational institution at Swarthmore, Pa., founded in 1869. The enrollment for the regular fall session of 1920 was 500. There were 42 members in the faculty. Endowment funds amounted to \$2,225,000. The income for the year was \$232,293. The Hicks Hall of Engineering was erected. A successful endowment campaign for \$1,000,000 was completed, and a gift of \$200,000 was received from the General Education Board. Joseph Swain, the president, resigned.

SWAZILAND. A British protectorate in South Africa, situated in the southeast corner of the Transvaal and north of Zululand. Area, 6678 square miles; population estimated in 1914 at 107,117; European population estimated in 1919 at 1700. The chief products are: Grain, tobacco, millet, peanuts, and vegetables. Rich mineral resources are reported, but have not been developed, with the exception of tin of which the exports in 1919-20 were valued at £66,676. Revenue and expenditure for 1919-20 were: £91,801 and £87,073, respectively. The protectorate is under the High Commissioner for South Africa, that office being held in 1920 by Prince Arthur of Connaught. The resident commissioner in 1920 was D. Honey.

SWEDEN. A kingdom in the extreme north-western part of Europe, occupying the eastern and larger division of the Scandinavian peninsula. Capital, Stockholm.

AREA AND POPULATION. The area is placed at 173,035 square miles and the population was estimated, Dec. 31, 1918, at 15,813,850. According to the census of 1910, the only inhabitants of other than Scandinavian stock were 25,290 Finns, 7138 Lapps and a few thousand others. The movement of population in 1918 was as follows: Births, 117,739; deaths, 104,183; marriages, 38,626. The immigrants in that year numbered 4932, and the emigrants, 4853 of whom 1416 went to the United States. The chief towns with their population at the beginning of 1919 were: Stockholm, 408,456; Göteborg, 197,421; and Malmö, 110,459.

AGRICULTURE. The number of farms under cultivation in 1917 was 447,695. The acreage in hectares and produce in tons for the principal crops in 1919 are shown in the following table:

Crop	Acreage (hectares)	Produce (tons)
	1919	1919
Wheat	140,913	258,792
Rye	372,068	586,689
Barley	166,672	280,878
Oats	712,872	1,111,730
Mixed Corn	260,782	475,749
Leguminous crops ¹	44,748	67,756
Potatoes	168,689	2,111,213
Roots ²	127,650	3,838,872
Hay ³	1,342,878	4,300,969
¹ Peas, beans, and vetches. ² Sugar-beet and fodder-roots. ³ And fodder plants.		

The following table gives the value of the harvests of 1919 and 1920:

Crops	1919	1920
Wheat	\$26,150,505	\$21,036,585
Rye	57,815,404	46,341,463
Barley	22,520,202	18,089,433
Oats	73,108,838	58,841,463
Mixed grain	32,761,616	26,361,585
Potatoes	41,417,677	33,838,333
Root-fodder	25,990,404	20,914,654
Hay	168,470,182	185,386,279
Straw	67,759,838	54,532,520
Total	\$515,994,666	\$414,887,315

According to the special report on Swedish forests prepared under the United States Bureau of Foreign and Domestic Commerce (*Special Agents Series No. 195*), Sweden occupies the leading position in the lumber world, not on account of the quality produced, but on account of scientific forest management and efficient manufacturing and selling methods. Fifty-one per cent of the country is comprised within the 55,000,000 acres of forests, of which 13,000,000 are public. Because of the realization in Sweden of the supreme importance of forests in the national life, stringent laws with regard to cutting have been adopted. A Swedish forest expert is quoted as saying that "the position of Sweden as an independent nation and as a civilized country is contingent upon the existence or non-existence of forests." During normal years before the war the exports from Sweden of forest products aggregated \$90,000,000, or 44 per cent of the total exports. The Swedish government accordingly considers the perpetuation of the forests of such vital importance that no one is allowed to endanger the future of the timber stands by reckless exploitation for the sake of immediate profit. This point of view is so generally accepted that no difficulty has been experienced in connection with the government's control of the cutting of timber on private lands. Because the cutting is thus restricted and it is a matter of necessity to get the utmost value out of the cutting permitted, particular attention is paid in Sweden to the elimination of waste in the forests. The high stumps prevalent in America are unknown in Sweden. Top logs, too, are not left in the woods. The closest possible attention is paid not only to price but to the utilization of waste products in logging operations. Strict laws govern the management of the Swedish forests, varying only with difference in climate. These laws have to do with cutting and with the reforestation of cut-over lands. Lately a law has been enacted to prevent the cutting of immature trees unless such cutting is necessary in order to improve the condition of the forests. Reforestation has been carried on in Sweden by

both public and private enterprise. The forest owners regard it as a commercial and paying proposition.

COMMERCE. The leading exports and imports for 1917 were as follows:

	Imports 1917 Kronor	Exports 1917 Kronor
Textile manufactures	69,776,254	10,629,258
Corn and flour	35,282,653	1,138,216
Colonial wares	41,223,852	2,249,434
Raw textile material and yarn	89,455,167	700,461
Minerals, of imports mostly coal	172,031,565	110,869,046
Metal goods, machinery, &c. Live animals and animal food	100,350,551	281,810,552
Hair, hides, and other animal products	65,979,087	58,418,765
Metals, raw and partly wrought	22,293,774	9,655,498
Timber, wrought and unwrought	54,208,557	238,825,594
Woodpulp, paper and paper manufactures	10,381,924	286,671,621
Other articles	7,827,480	299,561,452
	139,799,460	99,021,383
Total	758,610,304	1,349,551,300
	(41,773,733L.)	(76,465,287L.)

The following information was supplied by the United States Bureau of Foreign and Domestic Commerce. An examination of Sweden's exports and imports for the first nine months of 1919 and 1920 disclosed very substantial gains in the foreign commerce of the country for 1920, the bulk of which was cleared through Göteborg. A comparative table of exports and imports for the first nine months of 1919 and 1920, is herewith given:

	First 9 months of	
	1919 Tons	1920 Tons
Exports		
Fish	31,466	16,604
Meats	3,527	5,019
Dairy products	31	17
Cereals	2,574	10,258
Red whortleberry	1,698	661
Shoes	246	48
Wood tar	5,846	7,484
Turpentine oil	202	611
Carpenter and barrel manuf're	3,787	7,697
Wood chips	1,079	2,160
Woodpulp products	646,628	994,741
Cement	84,335	61,061
Matches	18,614	30,886
Rails and bars	6,679	6,542
Chemicals	12,977	34,056
Mining products	2,240,133	2,993,566
Tubes of clay	8,931	8,980
Bottles and tins	3,554	3,906
Wire	20,356	14,021
Tubes	7,512	9,475
Horse nails	2,071	3,886
Knives	72	74

Iron, cold-rolled, etc.	245	1,738
Bottom sheets, sleepers.	3,643	5,711
Rails, tramway rails.	24,442	36,345
Tubes	8,528	24,625
Total	2,465,458	3,674,980

Especially noteworthy was the increase in exports of Swedish electrical and agricultural machinery indicating a healthy growth in both industries. To the American exporter Sweden's wood-pulp products, matches, chemicals, mining products, and timber have been of principal interest. Of these, matches, chemicals, and newsprint paper are manufactured in large quantities. It will be noticed, for example, that the country practically doubled its export of newsprint paper and its exports of other paper more than trebled. The chemical trades also showed remarkable growth, while the trades of mining products and timber were barely holding their own. Of the imports, motor vehicles showed the greatest percentage of increase, a 600 per cent being observed. These were largely imported from the United States. The other great article of Swedish import is raw phosphate, which showed an increase of nearly 100 per cent, or from 57,000 tons to 103,000 tons during the 1920 period compared with 1919. Potash from Alsace-Lorraine showed a decrease in importations from 117,000 tons to 32,000 tons. Possibly of even greater interest to the American exporter was the development of the Swedish market for cereals, tobacco, provisions, textiles, oils, and chemicals. Recently cereals have been largely imported from the two Americas, but a steady decline was noticeable for the year 1920. American hosiery, silk, and cotton had long dominated the market. The English and Germans, however, practically controlled the woolen trade. Tobacco is largely imported from the United States by the Swedish tobacco monopoly, but this trade has also showed declines during the year. The dried fruit trade, largely in the hands of American exporters, also revealed a declining market.

RAILWAYS. The railway mileage in 1918 was 9385, of which 335 was owned by the state. In the early part of 1920 the Swedish parliament definitely approved of the electrification of the State Railways between Stockholm and Göteborg and has appropriated for the work 23,000,000 kronas (normally \$6,164,000). It was expected that the conversion from steam to electrical operation would be completed by 1925.

GOVERNMENT. Executive power is in the king who acts with the advice of the council of state, and legislative power is in a diet of two chambers, both elected by the people. The ministry at the close of 1920 was constituted as follows:

Prime Minister, Baron Louis de Geer; Foreign Affairs, Count Wrangel; Justice, Prof. Ekeberg; Social Affairs, M. Elmquist; Communications, M. W. Murray; Finance, M. Tamm; Trade, M. C. G. O. Malm; Defense, Gen. Hammerskjöld; Agriculture, Prof. Hansson; Education and Ecclesiastical Affairs, Dr. Bergquist; and, without portfolio, M. Dahlberg, M. Ericsson.

ECONOMIC DIFFICULTIES. Early in the year there were many strikes owing to the failure of employers to increase proportionately the wages under the new eight hour law, which went into effect January 1. While the employers insisted on an increased output, the workmen demanded increased wages. The question of taxation caused dissension in parliament and in the coalition government under Edén which resigned March 6.

SOCIALIST MINISTRY. For the first time in Sweden a Socialist ministry was now established (March 10). It was constituted as follows: Prime Minister, Hjalmar Branting; Foreign Affairs, Palmstjerna; Justice, Undén; War, Hansson; Navy, Eriksson; Interior, Svenson; Treasury, Thorsson; Education and Public Worship, Olsson; ministers without portfolio, Sandler and Nothin. Its programme included socialization of industry by law; expropriation of large estates with compensation; democratization of the courts with free legal defense; abolition of the death penalty; disestablishment of the state church; disarmament. A marriage law passed the Rikdag, April 17, depriving the husband of the legal guardianship of his wife and the right to dispose of her personal property; empowering the wife to acquire property in her own right; requiring the wife's consent to the sale of the family home by the husband, if he owned it, and dispensing with any court action in the case of a divorce if both parties desired it, the sole requirement being that the parties register before a judge.

THE ALAND ISLANDS. The question of the Aland Islands has been discussed in its general aspects in preceding YEAR BOOKS. In 1920 it was a subject of investigation by an International Commission of three jurists, to which was submitted the respective arguments of Sweden and Finland. This commission in its opinion announced September 15, held that the controversy hinged on the question of political status and that this political status was at present undergoing a change. In the first place, the population of the island was demanding separation from Finland. In the second place, Finland was not yet a definitely constituted state. The agreement of Mar. 30, 1846, which provided that the islands should not be fortified or used as a military base, was in the opinion of the commission still in force. Sweden and Finland agreed, September 18, to accept the mediation of the League of Nations in the dispute. The Council of the League thereupon decided to appoint a committee to investigate and arbitrate the subject. There was strong feeling however in both countries. The Finnish government declared that it would never give up the islands while Sweden insisted that the inhabitants should decide for themselves. The latter was certain to result in the decision favorable to Sweden, hence it was opposed by Finland. The League committee ended its investigation about December 10, and its report was pending at the close of the year.

NEW MINISTRY. The autumn elections to the Rikdag cost the Branting ministry ten seats and the Independent Socialists four, leaving the parties of the Left in a minority in the second chamber. A new cabinet was formed October 20, on the principle of non-partisanship and efficiency under the prime ministership of M. De Geer. A non-political cabinet was the logical consequence of the deadlock resulting from the refusal of the Liberals to join either with the Socialists or the Right and from the opposition of the Socialists either to a government based on the Right or a combination of the three parties in proportion to their strength. The new Prime Minister as chairman of the committee on the working day and as a Liberal, seemed to represent the general public. The programme did not pronounce definitely upon any economic policy.

SCANDINAVIAN ECONOMIC COOPERATION. Early in October a convention of economists from the Scandinavian countries was held in Stockholm for the purpose of discussing coöperative measures on the part of the Scandinavian communities, including measures of housing, stabilizing the currency, etc. Various measures were recommended including the establishment of central banks which would fix the rates for the various foreign currencies. Among the opinions expressed was the view that the neutral countries were to blame for the depreciation of their currencies in that they had abandoned the gold standard, and it was argued that the increased cost of living was the result of this depreciation to a far greater extent than of the increased cost of production. See NAVAL PROGRESS.

SWEDENBORGIANS. See NEW JERUSALEM, CHURCH OF.

SWEDISH LITERATURE. See SCANDINAVIAN LITERATURE.

SWIMMING. No branch of sport made such rapid strides in popularity during 1920 as did swimming, with the United States leading the way. Interest was primarily centred in the Olympic Games which attracted the world's best swimmers of both sexes and resulted in a signal triumph for the representatives of the United States. A complete record of the competitions at Antwerp will be found under the title OLYMPIC GAMES.

The senior outdoor championships of the Amateur Athletic Union were held at Chicago, the winners in the principal events being: 100 yards, Duke Kahanomoku, Honolulu, Hawaii; 440 yards, Norman Ross, Illinois A. C.; one-mile, Eugene Bolden, Illinois A. C. The women's outdoor championship held at Honolulu, Hawaii, Detroit, Mich., and Los Angeles, Cal., resulted as follows: 100 yards, straightaway, Ethelda Bleibtrey, New York City; 50 yards, Ethelda Bleibtrey; long distance, Marie Curtis, Detroit, Mich.

The winners in the senior indoor championships were: 100 yards, Tedford Cann, Detroit A. C.; 220 yards, free style, Tedford Cann; 500 yards, W. L. Wallen, Illinois A. C.; 150 yards, backstroke, Perry McGillivray, Illinois A. C.; fancy diving, Clyde Swensen, Los Angeles A. C.; plunge for distance, Fred Schwedt, Detroit A. C.

The women's senior indoor championships resulted as follows: 100 yards, Ethelda Bleibtrey; 500 yards, Miss M. Woodbridge, Detroit A. C.; 100 yards, breast stroke, Ruth Smith, New York

City; fancy dive, Thelma Payne, Multnomah A. C., Portland, Ore.

Yale won the intercollegiate title with Pennsylvania second and Princeton third.

SWINE. See LIVE STOCK.

SWITZERLAND. A federal republic of central Europe comprising within its limits the highest of the Alps and the Jura mountains: divided into twenty-two cantons of which three are in turn divided into two demi-cantons each. The capital is Berne.

AREA AND POPULATION. The total area is 15,976 square miles; population at the census of Dec. 31, 1910, 3,741,971; estimated July 1, 1916, 3,937,000. In nineteen of the divisions the majority of the inhabitants spoke German; in five, French; and in one, Italian. In 1910 the number of German-speaking inhabitants were 2,594,298; French 793,264; and Italian 302,578. The emigration which from 1911 to 1915, had averaged 4,684 a year, totaled only 304 in 1918, owing chiefly to the difficulties in travel on account of the war. The estimated population of towns over 100,000 on Jan. 1, 1918, was as follows: Zürich, 212,200; Basel, 135,500; Geneva, 140,900; Berne, 112,200.

The table below shows population by cantons and population at the federal census of 1920 (provisional figures), as compared with the figures for 1910.

Cantons	1910	1920
Zurich	503,915	535,634
Berne	645,877	669,966
Lucerne	167,223	176,189
Uri	22,113	23,843
Schwyz	58,428	59,475
Obwalden	17,161	17,461
Nidwalden	13,788	13,966
Glarus	33,316	33,689
Zug	28,156	31,439
Fribourg	139,654	142,297
Solothurn	117,040	130,230
Basel-City	135,918	140,112
Basel-Country	76,488	82,033
Schaffhausen	46,097	50,238
Appenzell-Ext.	57,973	55,113
Appenzell-Int.	14,659	14,542
Saint Gall	302,896	294,028
Graubünden	117,069	118,263
Aargau	230,634	239,777
Thurgau	134,917	135,153
Tessin (Ticino)	156,166	153,457
Vaud	317,457	315,326
Valais	128,381	128,274
Neuchâtel	133,061	130,671
Geneva	154,906	170,332
Total	3,753,293	3,861,508

The provisional figures at the census of 1920 indicated only a slight increase in the urban population, and in the case of nine cities there was a decrease, their respective populations (1910 figures in parenthesis) being as follows: Saint Gall, 70,139 (76,121); Chaux-de-Fonds, 37,681 (37,766); Neuchâtel, 23,348 (23,896); Montreux, 17,520 (20,915); Hérisau, 15,015 (15,502); Vevey, 12,883 (14,061); Le Locle, 12,458 (12,762); Rorschach, 11,585 (12,687); and Bellinzona, 10,342 (10,742). The population of sixteen cities had increased, including Zürich, 207,444 (192,011); Geneva, 135,771 (123,732); Basel, 135,749 (132,577); Berne, 105,689 (92,285).

EDUCATION AND RELIGION. There are seven universities situated respectively at Basel, Zürich, Berne, Geneva, Fribourg, Lausanne and Neuchâtel. The largest of these is that of Zürich, which had a total of attendance in 1918 of

1,908, and the next is Berne, with a total attendance in the same year of 1870. No later figures are available for school attendance than those given in the 1918 YEAR BOOK. The Protestants according to the census of Dec. 1, 1910 numbered 2,107,814 and the Roman Catholics, 1,593,538.

PRODUCTION. In respect to cultivation, the soil is divided as follows: Unproductive 4175 square miles; forest 3389; Alpine pasture land 3069; wild grass 2684; cultivated grass 719; cereals 758; and other crops 1074; vineyards 108. The forest land is mainly owned by the cantons and the municipalities. The agricultural census of 1917 showed that 432,282 persons were engaged in agriculture. In 1919 the wheat crop amounted to 105,900 tons; rye 41,500; oats, 42,000; potatoes 528,000. The annual census of April, 1920, gave the live stock as follows: Cattle 1,381,895; swine 545,306; goats 333,278; sheep 237,849; and horses 129,465. (See AGRICULTURE.) Salt mining is an important industry. From the five salt mine districts the output in 1918 was 800,953 quintals. The chief industrial centres and the principle articles manufactured in them are: Arbon, textile machinery and motor cars; Baden, electrical machinery; Basel, chemicals, machinery, and silk ribbons; Berne and Bienne, watch-making, and dairying; Cham, condensed milk; Geneva, jewelry, watches, and motor cars; Chaux-de-Fonds and Neuchâtel, watches, chocolate and motor cars; Lausanne and Vevay, chocolate; St. Gall, embroidery; Sileure, shoes and leather; Winterthur, machinery; Zürich, machinery, silk weaving, and bleaching. In 1917 and 1918 the industrial situation was largely affected by the war, Switzerland being surrounded by belligerent nations.

The following information is derived from the United States Bureau of Foreign and Domestic Commerce (1920): Raw materials were received only under restrictions and trade was seriously hampered. Industries also suffered from the fact that the mobilization of the Swiss army to preserve the neutrality of the Confederation had forcibly withdrawn from civil life practically half of the men employed in the industries. Switzerland is dependent on the outside world for sub-

stantially all the principal raw materials for manufacture, such as iron, copper, coal, oil, cotton, silk, rubber, chocolate, and leather. These raw materials had to be imported under guaranties exacted by the several belligerent powers as to the disposition to be made of the products manufactured therefrom or in exchange for Swiss products of prime necessity. The growing scarcity of manufactured products in the European countries created a brisk foreign demand for Swiss manufactured goods in those years and established a trading basis through which much of the raw materials necessary for Swiss home and export industries was made available. As a result the consolidated balance sheet of 203 of the principal industries of the country showed a net profit in 1917-18 of 12.16 per cent as compared with a net profit of 8.28 per cent for 197 corporations in 1912-13. The gross profit to share capital of the same industrial enterprises was in 1917-18, 58.72 per cent, and in 1912-13, 40.42 per cent; reserves to share capital in 1917-18, 23.48 per cent, and in 1912-13, 15.58 per cent. The years 1917 and 1918 were particularly prosperous ones for the chemical industry, the electro-metallurgical and electro-chemical industry (aluminum calcium carbide, etc.), the shoe and leather trade, the manufacturers of condensed milk, chocolate, and conserves. With the exception of the silk industry, textile industries in general, including the St. Gall embroidery industry, prospered as did also the watch-making industry and, to a less extent, the metallurgical industry. The railroads, mountain railroads, lake steamboat lines, and the hotels continued to suffer from the lack of tourist travel.

COMMERCE. Swiss export and import trade for 1917 and 1918 is compared with the last normal year of foreign commerce (1913) in the following figures: 1913, imports \$370,560,000 and exports \$265,568,000; 1917, imports \$464,192,874 and exports \$448,530,019; 1918, imports \$463,482,303 and exports \$378,892,075. Classified according to the three grand divisions, raw materials, manufactured products, and food products, the values of the imports and exports of the Confederation with the percentages of the total import and export trade represented by each division in 1917 and 1918 were as follows:

Groups	1917				1918			
	Imports		Exports		Imports		Exports	
	Value.	Per cent.	Value	Per cent.	Value	Per cent.	Value	Per cent.
Raw materials.....	\$218,047,840	45.9	\$48,175,776	10.7	\$206,888,531	44.6	\$16,047,710	4.3
Manufactured products.....	126,805,417	27.3	362,142,457	80.8	134,762,047	29.1	336,207,437	88.7
Food products.....	124,340,117	26.8	38,011,786	8.5	121,831,725	26.3	26,636,928	7.0
Total.....	\$464,192,874	100.0	\$448,330,019	100.0	\$468,482,303	100.0	\$378,892,075	100.0

The principal countries of origin for Swiss imports and of destination for Swiss exports with the value of merchandise imported from and exported to them are given below.

Countries	Imports from		Exports to	
	1917	1918	1917	1918
Germany	\$88,530,000	\$119,626,000	\$148,082,000	\$86,038,000
United States	87,910,000	68,123,000	23,060,000	19,093,000
France	58,950,000	54,154,000	88,971,000	89,770,000
United Kingdom	51,765,000	47,794,000	69,582,000	51,633,000
Italy	85,785,000	43,140,000	26,422,000	18,890,000
Austria	8,461,000	11,840,000	18,191,000	20,000,000
Argentina	15,940,000	10,155,000	4,170,000	3,618,000
Spain	16,525,000	30,124,000	10,120,000	10,463,000
Russia	67,000	50,000	9,780,000	1,030,000
Netherlands	2,367,000	4,246,000	7,320,000	10,170,000
British India	8,601,000	9,432,000	3,000,000	2,613,000
Egypt	4,438,000	4,419,000	1,713,000	2,400,000
Brazil	4,392,000	7,400,000	2,596,000	2,850,000
Dutch Indies	7,035,000	7,886,000	1,086,000	1,425,000
Canada	340,000	80,000	4,355,000	2,730,000

Countries	Imports from		Exports to	
	1917	1918	1917	1918
Sweden	3,765,000	6,145,000	10,310,000	9,661,000
Belgium	2,546,000	4,060,000	1,190,000	446,000
Australia	3,947,000	301,000	2,940,000	4,090,000
Japan	6,450,000	14,281,000	2,600,000	4,292,000
Rumania	241,000	793,000	620,000	201,000
Denmark	160,000	290,000	6,010,000	8,588,000

RAILWAYS. An important step in the gradual electrification of the government railway system of Switzerland was to be noted when \$25,000,000 of government of Switzerland 8 per cent bonds were offered in the United States, the entire proceeds to be spent in America with this single object. Switzerland was stated to have 2,700,000 horse power in water power resources, which with provisions for control at the headwaters might be increased to 8,000,000, and it was the aim of the railway engineers to provide hydro-electric installations for its development as rapidly as possible and use it on lines of the government system. In 1920 there was a total of 3300 miles of railway in Switzerland, of which 1900 miles were owned by the Swiss Confederation and the total cost of electrifying the latter was estimated roughly at \$200,000,000. These government lines include the principal arteries of the Swiss railway system. Of the 1400 miles owned by private companies, 622 miles in 1920 already were electrically operated, but only two of the important federal standard gage lines had been electrified. The first was the line from Berne to Thun, a distance of about 20 miles, opened for operation in May, 1919, to connect with the privately-owned Berne-Lötschberg-Simplon Railway with trains hauled by electric locomotives direct from Berne to Brig. From 5 to 7 through passenger trains and 3 freight trains are operated each way per day over this line.

The second Federal line to be electrified was the line from Erstfeld to Bellinzona, a distance of 68 miles. The electrification of this line approved in 1913, by 1920 was practically completed at an estimated cost of about \$8,000,000. This section handles a large amount of traffic with Italy and 28 per cent of its length consists of tunnels and a grade of 2.5 to 2.7 per cent for 25 miles. It was planned to extend the electrification of this line from Bellinzona to Chiasso and from Erstfeld to Luzerne. These lines would be supplied with power from the plants at Amsteg and Ritom, the former with a prospective capacity of 26,000 horsepower and the latter with 32,000 horsepower output, which would take care of traffic increases of 60 to 70 per cent on the original plans.

The Federal lines were designed to operate on 15,000 volts, low frequency, single phase current, from an overhead wire and four locomotives were placed in service in 1919, built for this purpose by two manufacturers, each of whom supplied a passenger and a freight locomotive.

Among other new projects approved during the year by the board of administration of the Federal railways was the new Ulmberg tunnel on the line on the left bank of Lake Zürich and the construction of the foundation walls near Steinen, as well as the electrification of the Sion-Lausanne line. A credit of 40,000,000 Swiss francs was voted for these purposes.

In Switzerland as elsewhere in Europe the deficits had increased in railway operation being \$41,510,000 in 1918 as compared to \$14,355,000 in 1917, labor, pensions, supplies and most of all coal showing marked increases in 1918.

The general tendency throughout Europe to shorten the working day found expression in a measure for an eight-hour day for the employees of the Swiss railway, postal, telegraph and telephone services which was carried on a referendum by 360,000 votes to 271,000, 67 per cent of the electors voting.

A somewhat revolutionary idea in railway operation was the suggestion made in connection with the proposed reconstruction of the Swiss public services for the unification of the staff of the state railways with the staff of the federal post and telegraph offices. In other words the station-masters in smaller places would become the heads of the local post and telegraph offices, while the trainmen of local trains would look after the mail bags.

FINANCE. Expenditures for the year 1921 were estimated at 523,000,000 francs, an increase of 120,000,000 francs over 1920. Receipts for 1921 were estimated at 358,000,000 francs, an increase of 79,000,000 francs over 1920. The prospective deficit, therefore, with which the government was faced for the year of 1921 amounted to 165,000,000, greater by 40,000,000 than the budget deficit for 1920. The proposed increase in the annual expenses was due largely to estimated increases of 53,000,000 francs in the national railway and postal departments, of 27,000,000 for military purposes, and of 16,000,000 in the cost of carrying the national debt. Proposals for increasing the revenue included a provisional increase in the domestic and foreign postal rates, pending a definite revision of rates as a result of the International Postal Union (q.v.) conference at Madrid; and further increases in the customs tariff, placing an ad valorem tax on different articles, especially those classed as "de luxe." It was also proposed to levy a tax on coupons, which was expected to yield some 20,000,000 francs. The state railway budget for 1921, carrying a deficit of 48,488,000 francs was passed. This placed the total railway deficit since 1914 at 278,000,000 francs.

A conference of expert financiers and of members of the financial committees of the two houses of the Federal Assembly was held at Kandersteg near the beginning of September for the purpose of devising means for meeting the country's financial difficulties. Official figures laid before it showed that at the end of 1913 the net financial assets of the Confederation amounted to 100,000,000 Swiss francs (1 franc=19.3 cents at par) as compared with a net deficit of about 1,100,000,000 francs at the end of 1919, to which should be added the 150,000,000 deficit for 1920.

The chief items in this deficit were as follows:

	Francs
Mobilization	1,220,000,000
State's loss by selling milk, wheat, etc., at reduced prices	168,000,000
Deficits from 1913 to 1919	267,000,000
Total	1,655,000,000

From this was to be deducted: War tax, 100,000,000 francs; amount from military exemption, 500,000,000 francs; total, 600,000,000 francs.

This made a net deficit of 1,055,000,000 francs. The interest and amortization on 1,055,000,000 francs required from 50,000,000 to 60,000,000 francs.

HISTORY. A referendum was held on the question of joining the League of Nations May 15-16. The popular vote was 400,000 against 300,000; the vote by cantons was 11½ for and 10½ against, the greatest majority in favor of membership being in the canton of Vaud (61,000 to 4,000). In the German-speaking cantons, the majority in opposition was 10,000. In the autumn, the federal parliament began its opening session with a discussion of a housing bill, the shortage of houses having become alarming in Switzerland as in other countries. The Socialists favored a measure for the determination of all available housing space and for compelling owners to rent premises not permanently used, but this was voted down by a large majority on the ground that such a step would merely result in discouraging building. The executive of the Swiss Social Democratic party decided against adherence to the Third International.

SYMONS, THOMAS WILLIAM. Military officer and engineer, died at Washington, D. C., November 23. His engineering work, especially that on canals, lighthouses and breakwaters placed him among the leading engineers of the army. He was born at Keesville, N. Y. Feb. 7, 1849 and graduated at the United States Military Academy in 1874. Down to 1899 when he retired from the service, he was engaged on civil and military engineering works in Washington, D. C., Oregon, California and other States of the Far West, and on the Great Lakes. After 1898 he devoted his attention to the building of the New York State canals. He constructed the largest breakwater in the world at Buffalo, N. Y. He served on the Canal Advisory Board and was consulting engineer on canals in the State of New York. He had previously had charge of the United States lighthouses from Detroit, Mich. to Ogdensburgh, N. Y., and had been for some time superintendent of public buildings and grounds and military aid to the President.

SYRACUSE, N. Y. See GARBAGE.

SYRACUSE. UNIVERSITY OF. A non-sectarian co-educational institution of the higher learning at Syracuse, N. Y., founded in 1870. The enrollment for the summer session of 1920 was 610 of whom 324 were women. There were 807 registered in the evening session and in the regular fall session of 1920 there were 4630 students, allowing for duplicates. The faculty numbered 450. There were 106,500 volumes in the library. President, James R. Day, LL.D., LL.H.D.

SYRIA. A country of Asia Minor, whose boundaries were still undetermined at the close of 1920, comprising the portion of Asiatic Turkey which lies between the Euphrates River and the Syrian desert on the east and the Mediterranean Sea on the west, and extending from the Alma Dag Mountains on the north to Egypt on the south. The boundaries under consideration in 1920 included an area of about 106,740 square miles and a population of about 3,133,500, that is to say, the northern part of Syria of the division known as Syria under Turkish rule, including the vilayets of Syria, Beirut, Zor and Aleppo. The chief towns with their estimated populations are: Damascus, 250,000; Aleppo, 250,000; Beirut, 150,000; Homs, 70,000; Hama,

60,000. The treaty with Turkey recognized the independence of Syria under a mandatory power and the Supreme Council designated France for the mandate. The Emir Feisal was proclaimed king of Syria, March 11, 1920. He was not recognized by the Allies and was finally driven out by the French as noted below.

THE EMIR FEISAL. As noted under the WAR OF THE NATIONS, the San Remo conference resulted in bestowing on France the mandate for Syria and on Great Britain the mandates for Mesopotamia and Palestine. This decision disregarded the claims of the Emir Feisal (or Faisal), the son of Hussein, king of the Hejaz, and the leader of a body of Arab nationalists who were believed to aim at the establishment of a great Arab empire (see preceding YEAR BOOK). He was thought at first to be under the protection or at least acting by the advice of British authorities. His aim appeared to be to constitute an independent Arab kingdom with its capital at Damascus, but it was said that his father disapproved this policy. Different interpretations of Faisal's movements were given according to the sympathy of the narrator with British or French designs. By French writers he was said to have recourse to a few fanatical malcontents who dreamt of a pan-Arabic empire and who hated the French. They accused him of entirely disregarding French rights in Syria, and of pursuing a policy of petty aggression, as shown by the arrests of certain friends of France and by an attempt to prevent the French from using the railway from Aleppo. They referred to him as an upstart, acting without any mandate and said that he systematically endeavored to discredit France among the people of Syria and the Libanus, that he had by money and promises stirred up the people against the French, and that forces commanded by his officers had by occupying the railway in the north of Syria retarded the sending of French aid to their garrisons of Cilicia. In July, it was announced that General Gouraud had sent an ultimatum to Faisal ordering him to cease his manoeuvres against France. According to British despatches on the subject this ultimatum commanded the Emir to recognize the mandate of France and the official use of the French language and of French money in Syria. According to French despatches the ultimatum consisted merely in the demand above-mentioned. When no reply was received French troops took possession of the railway. By July 31, Faisal had been set aside and had left the country and the French were in possession of the cities of Aleppo and Damascus. They set up a government under French protection in the Libanus which was to administer the western part of Syria.

THE FRENCH IN SYRIA. In September, General Gouraud, French high commissioner for Syria, believing order restored over the greater part of the Cilician plain decided to cease offensive operations. He thereupon proceeded with measures of economic restoration which toward the close of the year were reported to have had good results. The railway system linking Beirut with the chief cities of the interior was repaired; a French bank was established and many industrial, economical and financial bodies were organized. French capital appeared to be finding investment there in considerable amounts. At the close of the year considerable progress was indicated in the reconstruction of postal and transport services, and in public education. The

French movement for economic exploitation had been gathering strength for two years. It received an impetus at the French Congress of Syria held at Marseilles, January 3-4, 1919, which recommended a number of important measures of reconstruction, including creation or improvement of means of transportation, protection of the cotton interests of the French in Syria, freedom of trade in Syrian products and promotion of exports, improvement of Syrian commercial legislation. This programme had already been partly carried out. Before the war French exports into Syria were placed at about 8,000,000 francs. The French demand included silk cocoons, silks, gums, cereals, eggs, fruits, olive oil, and skins; and the French exports included silk goods, machinery, jewelry, chemical products, drugs, sugar, glassware, cement, porcelain, hardware, etc. The French congratulated themselves that the Germans whom the Turks had favored were completely driven out, and that it was evident that French articles would be preferred to all others. In these descriptions of Syria, the Syrians were always described as faithful to the French tradition and as preferring France to any other country in the world. In French accounts the country was described as a French protectorate faithful to the French interest in spite of all its vicissitudes. In British accounts and in accounts by neutral persons on the other hand, it was frequently said that the Syrians were bitterly opposed to French control.

THE QUESTION OF OCCUPATION. An agreement on the part of France, Great Britain, and Italy, in regard to the safeguarding of their respective spheres within the former Turkish empire was formed when the Treaty of Sèvres was drafted but not made public till November. One of its features was the provision that each Power should retain its troops in the region under its control so long as they were required for the protection of racial minorities, until the Treaty of Sèvres went into force. General Gouraud's change of military policy involved the disarmament of a body of Americans who had been trained under French officers, and which was on the point of going to the aid of compatriots in the Cilician Taurus threatened by the Turks. Armenian refugees from Anatolia were ordered to leave Cilicia and upon their refusal some thousands were deported into French territory. According to the French Armenian squatters were keeping the rightful Turkish possessors from their lands. Armenian sources blamed the French for preventing the relief of the Armenians in the Taurus where the town of Hadjin which had been under siege was captured by the Turkish Nationalists and a massacre of 10,000 Armenians reported. The Armenians were informed by French authorities that as the military would eventually be withdrawn from the region it was occupying they must choose between accepting Turkish rule there in the future and leaving the country. There were other instances of a conciliatory policy on the part of the French toward the Turkish Nationalists and this became more marked after the downfall of Venizelos and the return of ex-king Constantine to Greece (q.v.). In the close of the year General Gouraud was in Paris giving evidence before the Senate committee of foreign affairs, and other committees in regard to conditions in Syria. It appeared from these discus-

sions that Cilicia would be evacuated as soon as a satisfactory peace could be obtained with the Turkish Nationalists, but that France would retain her commercial interest there. In respect to Syria, President Millerand declared, "France will occupy all of it and always." General Gouraud said the pacification of Syria had already been virtually achieved and that of Cilicia would follow. He argued that both for political and for economic reasons France must retain its hold on Syria.

PALESTINE. In the autumn the executive office of the Zionists in London issued a request to the Jews of the world to aid in establishing the Jewish national seat of Palestine, and decided to raise a loan of \$12,500,000 to be negotiated either through the British government or the Palestine administration and to be floated by London and New York bankers. The High Commissioner of Palestine, Sir Herbert Samuel, who had been sent out to organize the administration, appointed his advisory council, October 1. On October 11 the Jewish National Assembly met at Jerusalem with two hundred delegates, but the orthodox element refused to take part on the ground that the decisions of the assembly would not be binding on the Jews of Palestine. Toward the close of the year Jewish immigrants were arriving at the rate of about 1000 a month, and it was reported that over 200,000 were on the way, chiefly from southern Russia. Measures were taken by the High Commissioner in December for the organization by the aid of English, American and Egyptian financiers of a system of credit banks in the country. At the end of the year a campaign was going on among the Jews of the world for the raising of a fund of £25,000,000 for the restoration of Palestine. See **ARCHAEOLOGY**.

TAFTE, THOMAS. Roman Catholic priest, died at Brooklyn, N. Y., December 1. He had been for forty-seven years rector of St. Patrick's Church in Brooklyn. He was born in 1833; ordained in 1863 and thereafter administered in Brooklyn, where he was one of the best known and most beloved of the city's priests.

TAHITI. See **FRENCH ESTABLISHMENTS IN OCEANIA**.

TAIWAN. Official name of Formosa (q.v.).

TALBERT, JOSEPH TRUITT. Banker, died, May 8. He was born at Hardy, Miss., August 15, 1866; studied at the University of Mississippi, and went into the banking business. He was national bank examiner in the West and Southwest in 1894-97. After 1909 he was vice-president of the National City Bank in New York City. After 1906 he was a member of the Currency Commission of the American Banking Association. In politics he was a Republican.

TAMBURINI, K. See **PSYCHICAL RESEARCH**.

TARBELL, FRANK BIGLOW. Archaeologist, died at New Haven, Conn., December 4. He was born at Groton, Mass., January 1, 1853; graduated at Yale in 1873 and was assistant and later professor of the school of classical studies at Athens and then entered the classical department at Harvard as associate professor of Greek. From 1894 he was professor of classical archaeology at the University of Chicago. Among his texts may be mentioned the *Philippics of Demosthenes* and a *History of Greek Art* (1896).

TARIFF. A so-called Emergency Tariff measure was introduced in the House of Representatives by Mr. Fordney of Michigan, imposing temporary duties upon certain agricultural

200

products to meet present emergencies, to provide revenue, and for other purposes. Its provisions were summarized by the United States Chamber of Commerce as follows:

The bill provides duties which would become effective on the day following its enactment into law and remain in effect for ten months thereafter. The duties provided, except as to manufactures of cotton, and of wool and hair, advanced in manufacture beyond being washed or scoured, would be in lieu of those now provided for the period proposed.

These duties are as follows: wheat, 35c bu., flaxseed, 30c bu. (56 lbs.), wheat flour and semolina, 20%, corn or maize 15c bu., beans 2c lb., peanuts or ground beans, 3c lb., potatoes 25c bu. (60 lbs.), onions, 40c bu. (57 lbs.), rice, cleaned, 2c, where used in manufacture of canned foods, 1c, uncleaned 1½c, broken, and rice flour and meal, ¼c, rice paddy, ¾c, lemons, 2c; peanut oil, 26c gal., cottonseed, coconut and soya bean oil, 20c gal., olive oil, 40c gal. in bulk, 50c in containers of less than 5 gallons; cattle 30%, sheep, 1 yr. or over, \$2, less than 1 yr. \$1, fresh or frozen beef, veal, mutton, lamb or pork, 2c; prepared or preserved meats n. s. p. f., 25%; cattle, sheep and other stock imported for breeding purposes, free; cotton, having staple 1½ inches or more, 7c lb., manufactures of which cotton of long staple, 1½ in., is component material of chief value, 7c lb. in addition to rates now in effect; wool (except carpet wools), unwashed, 15, washed, 30c, scoured, 45c. When sorted or increased in value by rejection of any part of original fleece the duty would be doubled, but not more than 45c lb. Any of the foregoing when advanced by manufacture would be dutiable at 45c pound in addition to duties now applicable. Sugar, tank bottoms, sirups of cane, sirups of cane juice, etc., not over 75 degrees by polariscope tests, \$1.16 per 100 pounds, with 4/100 of a cent per pound additional for every degree over 75; molasses not over 40 degrees, 24%, over 40 degrees and not over 56 degrees 3½c per gallon; above 56 degrees, 7 cents per gallon; sugar drainings and sweepings would be dutiable as molasses or sugar as determined by polariscope test. Butter, and substitutes therefor, would be dutiable at 6c per pound, cheese, and substitutes, 23%, fresh milk 2c per gallon, cream, 5c per gallon, preserved or condensed milk (including weight of immediate covering) 2c per pound, sugar of milk, 5c per pound, wrapper tobacco and filler (containing more than 15% wrapper) unstemmed \$3.35 per pound, stemmed, \$3.00 per pound, filler, n. s. p. f. unstemmed, 35c per pound, stemmed, 50c pound; apples, 30c bu., cherries 3c per pound, olives in solution, 25c gal., not in solution, 3c lb. The bill passed the House, December 22. It was the subject of much criticism and a sharp discussion of it was beginning at the close of the year.

TARIFF COMMISSION. The Commission renewed its recommendations on the subjects of interim revenue legislation, foreign trade zones, "dumping" and unfair foreign competition, and reciprocity and commercial treaties (see preceding YEAR BOOK). It continued during the fiscal year the publication of reports on Tariff policies for dependent colonies, parts of which had already appeared, and it completed or nearly completed the digest of commercial treaties and the reports on Canadian reciprocity and on the

wool-growing industry throughout the world. Among the investigations that it had in hand were: Special or preferential transportation rates of railroads in this country and abroad; abnormal conditions in certain mineral industries since the war; silk production and manufacture in Europe; wool manufacture in Great Britain; British metal and chemical industries; industrial conditions in Japan; the American lumber industry; Agriculture staples and the tariff; flax, hemp, jute and their manufactures; the fish industries; the wool carpet and rug industry; silk and silk manufactures and the tariff. Surveys on a variety of subjects were completed, including print paper and other materials of book manufacture; cotton cloth in relation to the tariff; refined sugar; costs of product in the dye industry; the incandescent mantle industry; the crude botanical drug industry; barytes, barium chemical, and lithopone industries. Mr. William Kent resigned from the Commission, March 1, and the personnel at the close of the year was as follows: Chairman, Thomas Walker Page; other members, David J. Lewis, William S. Culbertson, Edward P. Costigan; secretary, John F. Bethune.

TARLETON, FRANCIS ALEXANDER. British scientist, died, June 19. He was professor of natural philosophy in the University of Dublin. He was born in Ireland, April 28, 1841; educated at Trinity College, Dublin, where he graduated with high honors. He wrote an *Introduction to the Medical Theory of Attraction* (1899, vol. 2 1913); *A Treatise on Dynamics* (with Dr. Williamson; 3d ed. 1900).

TASMANIA. A state in the Commonwealth of Australia, consisting of the island of Tasmania and several small islands. Area including Macquarie, 26,216 square miles; estimated population, June 30, 1919, 210,881, as compared with (1911) 191,211. Capital, Hobart, with an estimated population, Jan. 1, 1918, of 40,352. Imports, 1918-19, £608,786; exports, £1,002,093. The budget for 1918-19 was: Revenue, £1,581,984; expenditure, £1,644,512. The debt in 1919 was £15,281,281. The railway mileage was 747, of which 587 was state owned. The executive power is in a governor or administrator appointed by the crown and the legislative power in a legislative council and house of assembly, elected for six years and three years respectively. Governor in 1920, Sir W. L. Allardyce; prime minister, Sir W. H. Lee. See AUSTRALIA.

TAYLOR, HOWARD. Lawyer, died in New York City, November 26. He was born in New York City in 1865; graduated at Harvard, 1886; began his law practice in New York City in 1888, where he became the head of the law firm of Taylor, Jackson, Brophy and Nash. He was counsel for the New York World.

TEACHER SCARCITY. See EDUCATION IN THE UNITED STATES.

TELEPHONY. The year was notable for a constantly increasing demand for telephone service and considerable difficulty in supplying these demands of the public for service. There were several causes for the latter condition. At the beginning of the year the telephone companies were far behind in meeting requests for service because they were but just recovering from the war period, during which development work and manufacture of apparatus for public use had almost ceased. Some time was required, there-

fore, to recover from this and get back to a more normal condition. Furthermore, in many localities the cost of extensions and improvements involved in furnishing service to new subscribers was so great that under the prevailing rates the companies were unable to complete their plans of development as fast as was desirable or necessary.

In New York City the results of preparations that had been made for furnishing more and better service to subscribers fell short of what had been intended, for the reason that the prevailing low rates for service were gradually but surely forcing the operating company into a position where a deficit was incurred. The New York Telephone Co., during the month of November, for instance, reported that toll and exchange revenues were \$4,181,000 in addition to \$92,000 received from outside investments, but the operating expenses during that month amounted to \$4,325,477. It was stated that at the end of the year there were 90,000 unfilled applications for telephone service in New York City alone, and the outlook for supplying them was not encouraging. In spite of the financial handicap, the company completed and put into use several new central stations and was actively prosecuting the work of installing the "machine switching" system. This was intended to dispense with a considerable number of operators at central offices and involved the use of dialing instruments for sub-

TENNESSEE. POPULATION. According to the preliminary report of the census of 1920, there were 2,337,885 residents in the State, January 1, 1920, as compared with 2,184,789 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 252,691, an increase of 2.7 per cent since 1910. The following table is compiled from the estimates of the United States Department of Agriculture for the years, 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	3,325,000	93,100,000	\$80,997,000
	1919	3,300,000	70,620,000	110,873,000
Oats	1920	350,000	8,225,000	6,416,000
	1919	300,000	6,600,000	6,138,000
Wheat	1920	424,000	4,028,000	7,855,000
	1919	700,000	6,650,000	14,763,000
Tobacco	1920	117,000	*85,410,000	17,082,000
	1919	138,000	*111,780,000	28,057,000
Hay	1920	1,470,000	*2,050,000	41,915,000
	1919	1,340,000	*1,781,000	48,014,000
Potatoes	1920	43,000	3,569,000	5,710,000
	1919	45,000	2,970,000	5,108,000
S't Potatoes	1920	42,000	4,284,000	5,269,000
	1919	40,000	4,400,000	5,148,000
S'g'm Sirup	1920	20,000	*1,800,000	1,818,000
	1919	18,000	*1,566,000	1,644,000
Cotton	1920	824,000	*310,000	20,150,000
	1919	758,000	*310,000	51,932,000

DRAINAGE. Statistics of drainage for Tennessee were for the first time provided by the census of 1920. The chief points are presented in the following table:

SUMMARY FOR THE STATE—1920			
Item		Amount	Per cent. of total
DRAINAGE ON FARMS			
Number of all farms in the state		252,774	100.0
Farms reporting land having drainage		8,887	3.5
Farms reporting land needing drainage		20,997	8.3
All land in farms	acres	19,510,856	100.0
Improved land in farms	acres	11,185,302	57.3
Farm land reported as provided with drainage	acres	254,118	1.3
Farm land reported as needing drainage	acres	640,479	3.3
DRAINAGE ENTERPRISES			
Approximate land area of the state	acres	26,679,680	100.0
All land in operating drainage enterprises	acres	363,671	1.4
Improved land	acres	163,218	0.6
Timber and cut-over land	acres	189,945	0.7
Other unimproved land	acres	10,508	1
Capital invested in and required for completion of operating enterprises		\$3,447,991	100.0
Capital invested in these enterprises to Dec. 31, 1919		2,925,944	84.9
Additional capital required to complete these enterprises		522,047	15.1

¹ Less than one-tenth of 1 per cent.

scribers. It was expected that one or more exchanges would be so far equipped with the new apparatus early in 1921 that they would go into regular service early in the summer. In spite of continued difficulty in securing and training women for the position of operator, and of holding them for more than a brief period, the quality and reliability of service improved during the year.

TEMPLE UNIVERSITY. A co-educational institution of higher learning supported by the State. It is located at Philadelphia, Pa., and was founded in 1884. There were 361 students enrolled in the summer session of 1920 and in the regular fall session there were 6490 students enrolled allowing for duplicates. The faculty numbered 345. The total income for the year was \$538,097. There were 14,557 volumes in the library. Gifts totaling about \$100,000 were received toward a new building; pledges were made amounting to \$200,000 or more. The president was Russel H. Conwell, D.D., LL.D.

The drainage enterprises in the State lie almost entirely west of the Tennessee River. Most of them are drained through the smaller tributaries of the Mississippi River—namely, Obion River, Forked Deer River, and Hatchee River; some are drained through Big Sandy River, Beech River, and a few of the creeks entering the Tennessee River. All of them are public corporations organized under the general drainage district law of the State, approved April 28, 1909 (ch. 185). The statute applies to the whole State except Reelfoot Lake. The total works completed to December 31, 1919, comprised 777.3 miles of open ditches, 0.3 mile of tile drains, and 42.3 miles of accessory levees; the additional lengths under construction were 135.4 miles of open ditches, 0.1 mile of tile drains, and 10.2 miles of levees. These figures do not include drains or levees installed by individual farm owners supplemental to the works of the enterprises, nor the works of flood-protection or levee districts that had not undertaken the construction of ditches or tile drains.

The principal crops grown upon the drained land in drainage enterprises are corn and cotton.

EDUCATION. In 1920 the school population was 815,436; number of pupils enrolled, 619,852; average number in daily attendance, 453,503; number of teachers, 13,277. The average annual salaries of teachers in the respective groups of schools were as follows: County elementary teachers (white), \$348; (colored), \$271; city elementary teachers (white), \$607; (colored), \$434; county high school teachers (white), \$861; (colored), \$619; city high school teachers (white), \$629; (colored), 732.

ELECTION. The vote in the presidential election of 1920 was: Harding (Republican), 219,829; Cox (Democrat), 206,558; Debs (Socialist); 2239; as compared with the following vote in the presidential election of 1916: Wilson (Democrat), 153,282; Hughes (Republican), 116,223; Benson (Socialist), 12,542. The vote for governor was: Taylor (Republican), 229,463; Roberts (Democrat), 182,836.

OFFICERS: Governor, A. H. Roberts; Secretary of State, Ike B. Stevens; Treasurer, Hill McAlister; John B. Thomasson.

JUDICIARY. Supreme Court: Chief Justice, D. L. Lamsden; Associate Justices, Grafton Green, Frank P. Hall, Collin P. McKinney, Nathan L. Bachman.

TENNESSEE, UNIVERSITY OF. A non-sectarian, co-educational institution of higher education at Knoxville, Tenn., founded in 1794. There were 1109 students enrolled in 1920. The faculty numbered 308. There were 42,000 volumes in the library. President, Harcourt A. Morgan, LL. D.

TENNIS. The tennis season of 1920 was the most remarkable the sport has experienced since the world war, the United States court stars emerging from the many tournaments held throughout America, Europe and Australasia with a long series of victories that stamped them superior to all rivals. The most signal triumph of the United States was the capture of the Davis Cup, emblematic of the world's championship. This trophy returns to America as the result of the marvelous playing of William T. Tilden, 2nd., and William M. Johnston, who overwhelmed the teams representing England and France in the preliminary matches and then made a clean sweep in the finals with Norman Everard Brookes and Gerald L. Patterson as their opponents.

Among the women players Mademoiselle Suzanne Lenglen of France, Mrs. Lambert-Chambers of England and Mrs. Molla Bjurstedt Mallory of the United States were the outstanding figures. Mlle. Lenglen proved the greatest of these three and was crowned world's champion. See OLYMPIC GAMES.

A summary of the Davis Cup matches held during the year follows:

United States vs. England at Eastbourne, England, men's singles, William M. Johnston, U. S., defeated J. C. Parke, England, 6-4, 6-4, 2-6, 3-6, 6-2; William T. Tilden, 2d., U. S., defeated A. R. F. Kingscote, England, 4-6, 6-1, 6-3, 6-1; Johnston, U. S., defeated Kingscote, England, 6-3, 4-6, 3-6, 6-4, 7-5; Tilden, U. S., defeated Parke, England, 6-2, 3-6, 7-5, 3-6, 7-5; men's doubles, Tilden and Johnston, U. S., defeated Parke and Kingscote, England, 8-6, 4-6, 4-6, 6-3, 6-2.

United States vs. France at Eastbourne, Eng-

land, men's singles, Johnston, U. S., defeated Andre H. Gobert, France, 6-3, 8-6, 6-3; Tilden, U. S., defeated William H. Laurentz, France, 4-6, 6-2, 6-1, 6-3; men's doubles, Tilden and Johnston, U. S., defeated Gobert and Laurentz, France, 6-2, 6-3, 6-2.

United States vs. Australasia, at Auckland, New Zealand, men's singles. Tilden, U. S., defeated Norman Everard Brookes, Australasia, 10-8, 6-4, 1-6, 6-4; Johnston, U. S., defeated Gerald L. Patterson, Australasia, 6-3, 6-1, 6-1; Tilden, U. S., defeated Patterson, Australasia, 5-7, 6-2, 6-3, 6-3; Johnston, U. S., defeated Brookes, Australasia, 5-7, 7-5, 6-3, 6-3; men's doubles, Tilden and Johnston, U. S., defeated Brookes and Patterson, Australasia, 4-6, 6-4, 6-0, 6-4.

The principal tournaments held in the United States during 1920 resulted as follows:

National Singles Championship, Forest Hills, L. I., final round, William T. Tilden, 2d., of Philadelphia, defeated William M. Johnston, of California, 6-1, 1-6, 7-5, 5-7, 6-3.

National Doubles Championship, Longwood Cricket Club, Boston, Mass., final round, William M. Johnston and C. J. Griffin defeated Willis E. Davis and Roland Roberts 6-2, 6-2, 6-3.

National Clay Court Singles Championship, Chicago, Ill., final round, Roland Roberts defeated Vincent Richards 6-3, 6-1, 6-3.

National Clay Court Doubles Championship, final round, Roberts and Richards defeated Walter T. Hayes and Ralph Burdick 6-2, 6-2, 7-6.

Women's National Championship, Philadelphia, singles, final round, Mrs. Molla Bjurstedt Mallory defeated Miss Marion Zinderstein, 6-3, 6-1; doubles, Miss Zinderstein and Miss Eleanor Goes defeated Miss Helen Baker and Miss Eleanor Tennant 13-11, 4-6, 6-3.

Junior Championship, Forest Hills, singles, final round, Vincent Richards defeated W. W. Ingraham 6-2, 6-4, 6-1; doubles, Harold Godshall and Richard Hinckley defeated W. W. Ingraham and Arnold W. Jones 4-6, 6-3, 4-6, 7-5, 6-4.

Boys' Championship, Forest Hills, singles, final round, James L. Farquhar defeated William Einsmann 7-5, 6-1; doubles, C. V. de Biaso and James L. Farquhar defeated William Einsmann and Greville Acker 6-3, 6-2.

National Indoor Championship, New York City, singles, final round, William T. Tilden, 2nd., defeated Vincent Richards 10-8, 6-3, 6-1; doubles, Tilden and Richards defeated Samuel Hardy and S. Howard Voshell 6-3, 3-6, 6-4, 12-10.

Women's Indoor National Championship, New York City, singles, final round, Miss Helene Pollak defeated Miss Edith Sigourney 8-6, 6-2; doubles, Miss Pollak and Mrs. L. G. Morris defeated Miss Coroma Winn and Mrs. G. Della Torre 6-2, 6-4.

National Girls' Championship, Philadelphia, singles, final round, Miss Louise Dixon defeated Miss Helen Sewell 3-6, 6-3, 6-2; doubles, Miss Sewell and Miss V. L. Carpenter defeated Miss Ceres Baker and Miss Martha Bayard 6-4, 6-3.

The intercollegiate championship was won by Yale University.

TESCHNER-TAS, HELEN. See MUSIC, Artists, Instrumentalists.

TEXAS. POPULATION. According to the preliminary report of the census of 1920, there were 4,663,228 residents in the state, January 1, 1920, as compared with 3,896,542 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 435,666, an increase of 4.3 per cent since 1910. The following table was compiled from the estimates of the United States Department of Agriculture, for the years, 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	6,700,000	174,200,000	\$146,328,000
	1919	6,500,000	195,000,000	230,100,000
Wheat	1920	1,225,000	15,925,000	27,391,000
	1919	2,045,000	33,742,000	67,484,000
Oats	1920	1,575,000	44,100,000	29,106,000
	1919	2,250,000	94,500,000	60,484,000
Broom Corn	1920	33,000	3,800	448,000
	1919	58,000	10,800	1,512,000
Hay	1920	865,000	1,315,000	17,978,000
	1919	876,000	1,526,000	27,388,000
Peanuts	1920	184,000	4,784,000	8,653,000
	1919	222,000	5,550,000	13,209,000
Rice	1920	281,000	9,554,000	11,942,000
	1919	218,000	6,998,000	19,594,000
Potatoes	1920	45,000	2,340,000	5,148,000
	1919	53,000	3,796,000	7,972,000
S't Potatoes	1920	89,000	9,345,000	12,148,000
	1919	95,000	10,450,000	15,675,000
S'g'm Sirup	1920	7,900	743,000	780,000
	1919	8,800	598,000	610,000
Cowpeas	1920	65,000	715,000	2,088,000
	1919	90,000	890,000	2,772,000
Cotton	1920	12,576,000	4,200,000	277,200,000
	1919	10,476,000	3,099,000	542,319,000
Grain S'g'm	1920	1,906,000	60,992,000	73,800,000
	1919	1,798,000	59,334,000	65,267,000

MINERAL PRODUCTION. The Presidio silver mine, at Shafter, Texas, was in continuous operation during the year 1920, according to the United States Geological Survey. Small shipments of copper and lead ores were made from the Van Horn and Sierra Blanca districts. The metal production for the State for the year was 520,000 ounces of silver and small quantities of gold, lead, and copper.

ELECTIONS. The vote in the presidential election of 1920 was: Cox (Democrat), 289,688; Harding (Republican), 115,640; Ferguson (American), 47,669; Independent Republican, 27,515; Debs (Socialist), 8194; as compared with the following vote in the presidential election of 1916: Wilson (Democrat), 286,514; Hughes (Republican), 64,999; Benson (Socialist), 18,969.

TEXAS, UNIVERSITY OF. A co-educational State institution at Austin, Texas, founded in 1881. The main university is at Austin but the medical branch is at Galveston, and the College of Mines is at El Paso. The enrolment for the summer session of 1920 was 1955 and for the regular fall session it was 3802. There were 234 members in the faculty. The endowment consisted of 2,000,000 acres of land. The income for the year was \$425,000. There were 152,072 volumes in the library. President, Robert Ernest Vinson, D.D. LL.D.

TEXAS FEVER. See VETERINARY MEDICINE.

TEXTILE MANUFACTURING. No industry in the United States ever experienced a wider range of conditions than did that concerned with the manufacture and distribution of textiles in the year 1920. Starting with the continued inflation of the previous year and together with scarcity of machinery, labor and raw material, and an active demand at high prices there was a steady deflation accompanied by many types

of commercial disorder, most of which were weathered successfully, though they often meant large losses. The full effects of the wave of economy which was the popular reaction to the high prices of 1919 were manifested in what was termed a buyers' strike, and with retail customers failing to take goods, and demands fading away distributors and manufacturers alike were soon affected. Cancellation of orders, often when goods had been allotted under unusual or special conditions, straightway became general and mills and merchants were left with large stocks which customers refused or returned. This practice began about the middle of the year and reached dimensions never before encountered in the American textile trade. The wholesale clothing trade and the cloak and suit trade as well as the retail merchants repudiated many of their commitments, and as a result of this and other influences prices fell and merchandise failed to move. Naturally credits were curtailed and the production sources, namely, the mills, soon responded to conditions by closing down wholly or in part and reducing their output. In fact at the end of the year it was estimated that less than 50 per cent of the mills were operating to their capacity and in some cases were closed down entirely. Naturally such conditions also led to reduced wages, in many instances accepted as inevitable by the operators. It was realized that costs of living had not fallen materially but it was also believed that expenses everywhere must be reduced in order to keep plants operating. At New Bedford at the end of 1920 operators were receiving 108.9 per cent more in wages than in 1915 and even with a decrease of 22½ per cent, which was proposed for the New England cotton industry, the rate would still be 108.4 per cent higher than before the war. The entire wage question however was largely relative in view of the cost of living and the decreased purchasing power of the dollar.

TEXTILE MILL CONSTRUCTION. In the United States trade conditions were accurately reflected in the mill construction undertaken in 1920 for the textile industry. In the first half of the year there was activity, as a large number of new companies had been organized and were erecting new plants, while old-established concerns made extensive enlargements and improvements, many of which were in the nature of separate mills. In the Southern States in particular new cotton mill construction was conspicuous in the early part of the year and was the leading feature of the record. In the latter months of the year, however, there was a noticeable falling off in mill construction due to business depression which resulted in the closing down of many plants and curtailment in operation of a number of others.

According to the authoritative summary of mill construction annually compiled by the *Textile World* which the YEAR BOOK is privileged to quote, there were 264 new mills actually erected during the year 1920. This number would undoubtedly have been materially increased had a number of projects contemplated during the first six months been carried out, but which were either abandoned or postponed, in the latter case awaiting an improvement in business conditions. However 1920 measured up to the general average as is indicated by the following table:

COMPARISON OF NEW MILL CONSTRUCTION FOR TEN YEARS—1911-1920

	1920	1919	1918	1917	1916	1915	1914	1913	1912	1911
Cotton	89	74	29	52	51	24	26	27	37	32
Wool	30	54	24	24	23	19	21	24	24	20
Knitting	59	84	120	97	113	111	110	142	122	92
Silk	71	61	49	86	60	25	51	54	46	88
Miscellaneous	15	16	27	38	33	40	37	30	36	26
	264	289	254	297	280	219	245	277	265	208

As suggested, the cotton industry made a notable showing in mill construction. In North Carolina 27 new mills were added to the industries of that State, while in South Carolina, Massachusetts, Connecticut, Rhode Island and Pennsylvania there was active mill construction as well as in New Jersey and Texas. The new Manomet Mill No. 4 of New Bedford was one of the largest projects of the year including as it did, a main mill, a large two-story weaving mill and other buildings making a complete and up-to-date plant for the manufacture of cotton yarns and tire cord fabrics. As regards large additions and extensive improvements in cotton mills as well as new construction, the Southern States again led but Massachusetts exhibited marked growth in this respect, with Rhode Island and Connecticut following in the order named.

In contrast to the cotton industry new woolen mills were practically confined to the Northern States, Massachusetts leading with eight, Pennsylvania with five and Connecticut three. The same held true as regards enlargements and improvements which were also greatest in the State of Massachusetts, though there were notable additions to woolen or worsted mills at Duluth, Minn., Philadelphia, Pa., and at Bristol, R.I.

In the knitting industry Pennsylvania added a considerable quota of new mills with New York State being a close second, but it must be remembered that many new knitting concerns either lease entire buildings or rent a considerable amount of floor space for their operations instead of constructing new mills on their own account. The range of this industry continued to increase and in addition to the manufacture of sweaters and hosiery as well as bathing suits, underwear and knitted fabrics, silk hosiery was in many cases the principal product of a number of mills.

Despite varied conditions in the silk industry (see *SILK*) there was in 1920 considerable erection of new mills and extensions to those already established. Pennsylvania ranked first, as it did in 1919, with New York and New Jersey following, the others being scattered among the New England and Southern States. In 1920 New York State erected more silk mills than New Jersey, but new companies, however, in large numbers started operations in this silk centre, especially at Paterson. In many cases these concerns did not build new plants but purchased buildings or leased space in existing mills.

Under the head of miscellaneous mills, including principally those for dyeing, finishing and mercerizing, with a few asbestos, hemp and jute mills, the increase in 1920 was in about the same proportion as in 1919. An interesting enterprise was the Milverton Flax Co., Ltd., located at Milverton, Ontario, which not only built a new mill but was raising flax and tow to be used in the manufacture of flax fibre and tow products.

The Rockbestos Products Corp., New Haven, Conn., began operations during the year in the manufacture of asbestos for brake linings and

asbestos insulating wire, while the Asbestos Textile Co., North Brookfield, Mass., erected a new plant. The Olympic Textile Corp., Seattle, Wash., a company engaged in manufacturing all kinds of ramie goods, tire fabrics, etc., had made plans for the erection of a new mill during the spring of 1921.

UNITED STATES IMPORTS AND EXPORTS. The accompanying table shows that both imports and exports were greater in 1920 than in the previous year. The exports in 1920 exceeded imports by \$70,555,550.

IMPORTS

	Twelve mos. ending Dec., 1920	Twelve mos. ending Dec., 1919
Manufactures of—		
Cotton	\$137,431,814	\$52,649,218
Total fibre, flax, hemp, etc.	153,665,719	95,032,853
Silk	75,327,914	54,700,816
Artificial silk	2,102,704	4,936,344
Wool	58,115,537	19,059,806
	\$426,643,688	\$226,379,037

EXPORTS

Manufactures of—		
Cotton	\$402,079,647	\$273,115,411
Total fibre, jute, hemp, etc.	25,818,688	31,114,389
Silk	26,820,602	23,903,087
Artificial Silk	7,909,299	9,704,248
Wool	44,571,002	47,883,061
	\$507,199,238	\$385,670,196
Excess of exports ...	\$70,555,550	\$159,291,159

BRITISH COTTON INDUSTRY. The importance of the cotton manufacturing industry of Lancashire to Great Britain may be appreciated by the fact that during 1920 out of total exports from the United Kingdom amounting to £1,557,974,984 the shipments of manufactured cotton goods amounted to £401,682,535 in value.

The shipments of piece goods for the year prior to the war and for 1919 and 1920 was as follows:

	Yards	£
1913	7,075,252,000	97,775,855
1919	3,523,660,000	179,073,466
1920	4,436,557,500 (sq. yds.)	315,733,164

During 1920 compared with the previous year British foreign trade in cotton goods showed an increase in the case of the countries named as per the following list:

	Yards
Bombay	292,772,000
Bengal	232,973,000
China	148,216,000
Egypt	110,879,000
Dutch East Indies	85,227,000
Australia	63,326,000
United States	61,345,000
Argentine Republic	54,108,000
Straits Settlements	49,806,000
Burmah	48,248,000
Canada	35,652,000
Madras	32,248,000

On the other hand shipments to the following countries have fallen off, the decreases being given:

	Yards
Denmark	74,545,000
Belgium	70,656,000
France	69,894,000
Turkey	68,916,000
Switzerland	47,979,000
Germany	38,516,000
Netherlands	24,330,000
Roumania	16,466,000
Morocco	13,200,000
Foreign West Africa	10,466,000
Persia	6,255,000
Greece	1,864,000

With regard to British cotton yarn exports the following comparative table indicates the difference between the year before the war and 1919 and 1920:

	Pounds	£
1913	210,099,000	15,006,291
1919	162,616,600	33,907,909
1920	147,542,900	47,824,983

See COTTON, SILK, WOOL.

THEOSOPHICAL SOCIETY. An organization to form a nucleus of the Universal Brotherhood of Humanity without distinction of race, creed, sex, caste, or color. To encourage a study of comparative religion, philosophy, and science. To investigate unexplained laws of nature and of powers latent in man. This society was organized in 1875 by Madam H. P. Blavatsky and Col. H. S. Olcott in New York City. Later world headquarters were established at Adyar, Madras, India. It is a world-wide organization and presents a synthesis of the underlying principles of all religions. It attempts to explain the origin, the evolution, and the destiny of the human race. Works by its authors may be found under the names of H. P. Blavatsky, Anne Besant, C. W. Leadbeater, C. Jinarajadasa, A. P. Sinnett, I. S. Cooper, and L. W. Rogers. The president of the society is now Mrs. Anne Besant. The national headquarters of the American Section of the Theosophical Society are at 645 Wrightwood Ave., Chicago, Ill.

THORNE, WILLIAM VAN SCHOONHOVEN. Financier, died February 6. He was born at Millbrook, N. Y., March 22, 1865, and graduated at the Sheffield Scientific School in 1885. He went into the railway service and became president of the Delaware Valley and Kingston Railway. He was afterward assistant to E. H. Harriman on the Southern Pacific and was director of purchases on the Union Pacific and other western lines. He became vice-president of the Union Pacific, Feb. 19, 1919, and was a director or officer in a number of other lines, and of express companies, and other commercial enterprises.

THURINGIA. A federal state created under the new German republic in 1920. It was officially recognized April 24 and included the following divisions: Saxe-Weimar-Eisenach, Saxe-Meiningen, Saxe-Altenburg, Saxe-Gotha, Reuss, Schwarzburg-Sondershausen, and Schwarzburg-Rudolstadt. Area, 4546 square miles; population, according to the census of Dec. 1, 1910, 1,510,538. Capital, Weimar, with a population in 1910 of 34,582. The constitution was in process of formation in 1920, and meanwhile the

executive authority was in the hands of the ministry, composed of representatives from each of the above states; and the legislative authority in a Volkshat, or legislature, consisting of representatives from the legislatures of the above states. President of the ministry at the beginning of 1920, Dr. A. Paulsen.

THURSBY, Sir JOHN. British sportsman prominent in the races, died in December. He was born April 27, 1861, and educated at Eton and at Trinity College, Cambridge. He was a barrister and became high sheriff of Lancashire in 1905. It was as the proprietor of a great racing stud that he was best known; many of the celebrated race horses of the time were raised in his stables.

TIBET. An extensive region forming a dependency of China, reaching from the Pamirs to the frontiers of China. The estimated area is 463,200 square miles; estimates of population vary from 1,500,000 to 6,000,000, a probable estimate being about 2,000,000. Capital, Lhasa, with a population of from 15,000 to 20,000. Agricultural methods are primitive and in many parts of the country society is in the pastoral stage. Among the minerals worked are gold, borax and salt. Trade is chiefly with India and China. In 1918-19, imports from India were £150,000; exports to India, £460,000.

TIDAL POWER. See DAMS.

TILAK, BAL GANGADHAR. Indian political leader, died in July. He was born in 1855. His name became known during the famine and plague in 1897 when he attacked the preventive measures against the plague as tyrannical, and denounced the government. These attacks were followed by the murder of a British official. Finally Tilak was prosecuted for sedition and sentenced to eighteen months imprisonment, but was released within a year. In 1908 he was arrested again on the charge of disloyalty and sentenced to six years transportation which was afterwards commuted to imprisonment. He was released in 1914, but continued to give trouble in spite of his promises of loyalty. In 1915 he sued Sir Valentine Chirol for defamation on account of the book called *Indian Unrest*, published in 1910; and he came to England in 1918 in connection with his trial which took place in February, 1919. The verdict went against him and he returned to India. Among his latest activities was an attack upon his former friend and associate, Mrs. Besant, on account of her support of the reform bill.

TIMBER. See FORESTRY.

TIN. No single commodity was affected more by world commercial conditions in 1920 than tin, as its production and marketing in the East always are responsive to speculative and other influences, artificial as well as natural. In the summer of 1919 a boom started readily as there was a small visible supply due to the governments of the Federated Malay States and the Dutch East Indies carrying for their own account some 15,000 tons. Eventually this was unloaded but the price of tin, which in September 1919 was about £270 a long ton, steadily climbed until in February a maximum of £420 per ton was reached. This, however, was the turning point and soon large quantities of tin were being put on the market everywhere and prices fell. By the middle of June in London standard tin sold for £235 and then after a reaction in August carrying the price to £284 the steady decline set in,

continuing until new low levels were reached in November—in short, back to pre-war levels. There were decreased supplies at the end of the year.

nal revenue sources in 1916 and 5.4 per cent in 1920.

There were produced and withdrawn for consumption during the year 8,966,028,002 cigars,

TIRES, AUTOMOBILE. See RUBBER.

TIROL. An Alpine region which before the downfall of the Austro-Hungarian monarchy was a crownland of Austria, comprising the greater part of the administered district of Tirol and Vorarlberg; with Bavaria on the north and Salzburg and Carinthia on the east. Area, 10,362 square miles; population, Dec. 31, 1910, 946,613. The province of Northern Tirol was included within the new Austrian republic.

TOBACCO. The 1920 crop of tobacco in the United States considerably exceeded that of any previous year, being estimated at 1,508,064,000 lbs. in comparison with 1,463,325,000 lbs. in 1919 and the previous five-year average of 1,187,708,000 lbs. The price, however, was low compared with 1919 which gave the large crop a farm value only a little over half that of the previous year, namely, \$298,000,000.

There was vigorous protest at the reduction in price, especially in Kentucky, the largest tobacco growing State and the centre of the Burley tobacco industry, where markets remained closed for a time owing to the action of growers.

Tobacco continues to increase as a source of revenue to the United States, the receipts for the fiscal year ended June 30, 1920, amounting to \$295,809,355.44, an increase of \$89,806,263.60 or 43.6 per cent over the preceding year. The 1920 tobacco revenues were the largest ever collected and were five times those of 1910 and almost double those of 1918. Tobacco taxes comprised over 17 per cent of the total receipts from inter-

large and small, which exceeded any annual production for the past ten years except 1917. Since 1917 cigarettes have furnished the greatest revenue of any tobacco item. In 1920 50,408,827,557 small cigarettes were produced, or an increase of 32 per cent over 1919, and 39,714,132 large cigarettes, an increase of 38 per cent. Tax was paid on 414,877,746 lbs. of chewing and smoking tobacco and 38,605,173 lbs. of snuff, representing increases of 10 per cent and 11 per cent respectively. More than four-fifths of the total revenue on tobacco manufactures came from seven States—North Carolina, New York, Virginia, Pennsylvania, New Jersey, Ohio, and Missouri, in the order named.

Tobacco consumption in the United States has increased from 76,000,000 lbs. a year in the decade following the Civil War to 588,000,000 lbs. in 1905-1914, 900,000,000 in 1916, 1,000,000,000 lbs. in 1917, and 828,000,000 lbs. in 1918. The average per capita consumption of 2 lbs. following the Civil War increased to an average of 8 lbs. a year in the four years 1915-1918.

In the fiscal year 1920 unmanufactured domestic tobacco was exported from the United States to the value of \$271,940,888 and manufactured tobacco produced to the value of \$51,551,794. The imports for the year had a value of \$91,438,597, largely unmanufactured.

Hearings were begun by the U. S. Department of Agriculture in the fall of the year on tentative proposals for regulations and standards applying to tobacco, under the U. S. Warehouse Law. It is the plan under that law to license tobacco warehouses whose operators agree to adopt

the Government standards and regulations. It is expected that under such conditions warehouse receipts will serve as a means of negotiating loans in financing the tobacco crop and industry.

England has again taken up experiments in tobacco growing and the British Tobacco Growers Society has carried on field trials in many parts of that country. These have proved that the crop can be grown successfully on the poorer soils of Norfolk and can take its place as a farm crop in the ordinary rotation. Small areas are becoming well established. As late as 1910 the growing of this crop was prohibited by law.

TOBAGO. See TRINIDAD AND TOBAGO.

TOGO. Formerly a German colony in West Africa, constituting a protectorate and situated on the coast between Dahomey and the Gold Coast. It surrendered unconditionally to the Allies Aug. 14, 1914, and was divided administratively after the war between France and Great Britain. Area, 33,700 square miles; colored population (1913), 1,031,978; European population estimated in 1918 at 110. The eastern part, allotted to France, has an area of 21,893 square miles. The British part making up about a third of the territory borders the Gold Coast. The soil is fertile in the coast region and there are abundant forests. The chief commercial products are palm oil, palm kernels, cocoa, and copra. In the French portion the total volume of foreign trade in 1919 was equal in value to \$7,315,014, reckoning the franc at \$0.193, as against \$4,183,935 for 1918. The value of the imports was equal to \$3,210,172 as against \$2,000,284 in 1918. The value of the exports in 1919 was \$4,104,842 as against \$2,183,651 for 1918. The principal exports for 1919 were as follows, statistics of values not being available; Castor-oil beans, 161 metric tons; cocoa beans, 6 tons; copra, 378 tons; cotton lint, 555 tons; palm kernels, 4762 tons; and palm oil, 413 tons. Of the foreign trade in 1919 France enjoyed 21.30 per cent, England 64.70 per cent, and other countries 14 per cent. See FRANCE, *History*.

TOLEDO, OHIO. See GARBAGE.

TOLEDO, UNIVERSITY OF. An institution of the higher learning at Toledo, Ohio, founded in 1872. There were 210 students enrolled for the summer session and 1355 students for the regular fall session of 1920. The faculty numbered 31 members for full time and 23 for part time. The income of the institution amounted to \$170,440 for the year. There were about 8000 volumes in the library. President, A. M. Stowe.

TONGA, or the FRIENDLY ISLANDS. Three groups of islands in the Pacific Ocean between 16° and 23° 30' south latitude and 173° and 177° west longitude, constituting a British protectorate. Area, about 385 square miles; population estimated in 1917, at 23,766, of whom 22,590 were Tongans.

TONGKING. A territory annexed by the French in 1884, comprising the Northern main division of the colony of French Indo-China, south of the Chinese provinces of Kwansi and Yunnan. Capital, Hanoi, with a population (1915) of about 150,000. It is the capital also of French Indo-China. See FRENCH INDO-CHINA.

TONNETTI, MICHEL. See PAINTING AND SCULPTURE.

TORONTO, UNIVERSITY OF. A Canadian institution of the higher learning at Toronto,

Canada; founded in 1827. There were 4600 students enrolled in 1920. The faculty numbered 511. The endowment fund amounted to \$6,110,412 and the income for the year was \$1,055,825. The women of the college and their friends have inaugurated a plan for raising funds to help in the erection of a new Union. The governors have set aside \$125,000 for the erection of a Women's building. The Rockefeller Foundation was to have appropriated \$1,000,000 for the general endowment of the Medical Department upon condition that the University carry out a programme of development, including items to be provided from funds other than those contributed by the Rockefeller Foundation. The library contains 160,000 bound volumes and 52,000 pamphlets. President, Sir Robert Falconer, K.C.M.G.

TRADE UNIONS. The chief matters of interest in Trade Unions in the United States will be found in the article on the American Federation of Labor. See LABOR, AMERICAN FEDERATION OF GREAT BRITAIN. The amalgamation of various trade-unions into federations, the fusion of local interests into the larger combination of the labor party from a political standpoint, and the formation of a comprehensive trade union congress, with a membership of over 500,000 were the main features of the year 1920. The Trade Union Congress was held at Portsmouth with 955 delegates, representing 6,505,482 members. The 1921 meeting was fixed for Cardiff. See GREAT BRITAIN.

OTHER COUNTRIES. In Canada at the beginning of 1919, there were 2,274 branch unions with a total membership of 248,887; and 96 international unions having one or more branches in Canada with a membership of 201,432. In Australia in 1920 the membership of the trade unions was reported at 582,000 distributed in part as follows: Railways, 75,000; shipping, 50,000; metal-working, 47,000; agriculture, 44,000; food, tobacco, and drink manufactures, 41,000; building, 36,000; mines and quarries, 36,000; clothing, 30,000. In Germany the membership of the unions was reported in June, 1919, at 5,500,000 and at the close of 1920 at 7,500,000, the largest class being the metal-workers, placed at 1,600,000. Over 5,000,000 of the total membership belonged to industry, handicraft, and mining, and only 650,000 to agriculture and forestry. Other countries for which recent figures were available were: The Netherlands (1920), Members of Dutch Federation of Trade Unions, 247,870; Denmark (1920), 360,000; Hungary (1918), 500,000; Czecho-Slovakia (1919), 500,000; Switzerland (1919), 210,000 members of the Central Association; Austria (1919), 378,000 paying members of the Federation of Trade Unions.

TRANSCONTINENTAL MAIL. See AERONAUTICS.

TRANSVAAL. See SOUTH AFRICA, UNION OF.

TRANSYLVANIA. A part of the crownland of Hungary until the closing months of 1918, when it was annexed to Rumania; political status subject to the Treaty of Versailles. Area, 22,318 square miles; population, Dec. 31, 1910, 2,-

678,367. The inhabitants declared their independence of Hungary, Dec. 22, 1918, and on Jan. 11, 1919, Rumania by royal decree annexed the territory. In March, 1920, Transylvania had 45 senators in the Rumanian upper house and 112 Deputies in the Rumanian lower house.

TRAVEL. See LITERATURE, ENGLISH and AMERICAN.

TREUB, HECTOR. Dutch medical authority, died in April. At the time of his death he was professor in the University of Amsterdam. He was born in 1856, studied at Leyden University, where in 1886 he became a lecturer and built up a strong clinic in gynecology. He was placed among the best-known gynecologists of his time.

TREVOR, Sir ARTHUR CHARLES. British military officer, died in West Brompton, England, in October. He was born at Jellalabad, Afghanistan, April 6, 1841, the son of Capt. R. S. Trevor, who was killed by treachery in Kabul, leaving the child among the women and children, who made their escape after the garrison was captured by the Afghans. At the time of Sir Arthur Trevor's death, he was the only surviving member of the fugitives that were taken prisoner by the Afghans. He was educated at Oxford, but went to Bombay in 1861 and served in the administration. He was revenue member of the Bombay government after Nov. 18, 1892 and he was appointed Public Works Member of the Indian government in April, 1895.

TRIESTE. Before the disruption of the Austro-Hungarian empire a crownland of Austria, consisting of the Mediterranean port of Trieste with the surrounding region; occupied by Italy after the war. The population in 1919 was estimated at 190,013.

TRINIDAD AND TOBAGO. A British colony in the West Indies, comprising the islands of Trinidad (1860 square miles) and Tobago (114 square miles). Total population estimated, Jan. 31, 1919, 381,309. Capital of Trinidad, Port of Spain, with a population of 68,000. Imports and exports showed considerable increases in value during the year 1919 as compared with the previous year, this being attributable both to increased prices and to improved shipping facilities. The total import trade for 1919 was \$29,842,723, or \$5,319,715 greater than for the preceding year. The total export trade for 1919 amounted to \$34,831,651, an increase of \$7,225,084 over the year previous. The share of the United States in the foreign trade of Trinidad and Tobago now considerably exceeds that of any other country. During 1919, 39.1 per cent of imports was supplied by the United States, 20.5 per cent by Canada, 16.7 per cent by the United Kingdom, 13.3 per cent by Venezuela, and 4 per cent by France. There was increased activity in the petroleum industry of Trinidad during the year 1919, and many new companies purchased lands with a view to commencing drilling operations at an early date. Petroleum production had outstripped the asphalt industry, which was formerly the more important. In 1919, 475 persons were employed in the local asphalt industry as against 2425 employed in production of petroleum. The output of asphalt in 1919 was 93,806 tons, valued at \$272,088. There was an increase of 9775 tons in the output of asphalt in 1919 over the preceding year. The cane-farming and sugar-crop returns for the crop year 1919-20 showed 58,416 tons of

sugar, as against 47,850 tons in 1919, 45,256 tons in 1918, 70,891 tons in 1917, and 42,331 tons in the pre-war year 1913. The budget of 1918 was as follows: Revenue, £1,172,700; expenditure, £1,124,258. Governor in 1920, Sir John Robert Chancellor.

TRINITY COLLEGE. An institution for the education of men at Hartford, Conn., founded in 1845. The enrollment for the regular fall session was 214. The faculty numbered 19, including one addition. The productive funds amounted to \$1,700,000, and the income for the year was \$135,999.31. The library contained 90,000 bound volumes and 40,000 pamphlets. President, Rev. Remsen Brinckerhoff Ogilby.

TRIPOLI. See LIBYA.

TRISTAN UND ISOLDE. See MUSIC, Opera.

TROTTER, EDWARD BUSH. British prelate and church historian, died May 25. He was canon of Port of Spain, Trinidad. He was born Dec. 10, 1842, and educated at Harrow and at Kings College, London, and at Christ College, Cambridge. He officiated as rector in Trinidad from 1890 to 1901 and after 1908 was canon of the cathedral. He wrote the *Church of England; The Early History, Property, and Mission, Reformation Period; The Three Days of Grace; The Church Catechism and Bible Story* (3 vols.); *Two Historical Charts of The Church of England; Royal Progress of Our Lord*.

TROTTLING. See RACING.

TRUMBULL, FRANK. Railway president, died July 12. He was born at Arcadia, Mo., Nov. 7, 1858, and went into the service of the Missouri railways, in 1874. After engaging in the wholesale coal business in Colorado, he became the receiver and general manager of the Union Pacific, Denver and Gulf railway, 1893-9. From 1899 to 1909 he was president of the Colorado Midland Railway and after 1909 was chairman of the board of the C. & C. Railway Co. He held other important offices in the railway service.

TUBERCULOSIS. Dr. Maher, Chairman of the State Tuberculosis Commission of Connecticut publishes in the Medical Record for Dec. 11, 1920, a timely article on the failure of anti-tuberculosis crusades, or as he terms them "tuberculosis schemes." He limits these movements to those endorsed by a considerable number of the serious leaders of the warfare against the disease throughout the world. Such movements have originated only within the past forty years, and the weapons to combat the disease originally comprised out of door life, open windows, sanatoria, special dispensaries, condemnation of infected cattle, instruction of the public as to contagion, occupational treatment, farm colonies, tuberculosis surveys, enforcement of anti-spitting ordinances, etc., etc. Every one of these resources has become active and it is not denied that the mortality of the disease has been greatly reduced. Nevertheless for the following reasons these movements had only been partially successful. Every tenth or twelfth funeral was that of a victim of tuberculosis. Again the rich man with all of his material resources and the educated man still succumbed to the disease in large numbers. Still again the measures directed against tuberculosis were largely those which antagonized disease in general. Tuberculosis, in other words, had decreased because disease in general had lessened. In set-

ting out to do one thing the leaders of the movement accomplished something quite different. But while the men, medical and lay, who were crusading against tuberculosis at the beginning of the twentieth century were an enthusiastic lot with a large fund of valuable information, they had overemphasized the part played by man-to-man transmission and regarded tuberculosis as largely a contagious malady of adult life. This error they eventually corrected and according to the corrected view nearly every individual acquires the disease from whatever source in early childhood, this early infection amounting usually to a protective vaccination against the outbreak of the disease in early adult life. But the misfortune of having been on the wrong track for many years had largely neutralized the huge expenditures of effort and money used in the earlier decades of the movement. The entire propaganda of contagion had to be revised in favor of another which dealt almost wholly with the child. New strategy devoted against tuberculosis in childhood led to further reductions of general and tuberculous mortality. But despite the apparent advance in the movement, a certain amount of scepticism had come about, a lack of confidence in elaborate plans and formulæ. No comprehensive plan has been devised to succeed the one now in force. The nearest approach is based on the view that the tubercle bacillus is pathogenic only is one of the several phases of its bacterial cycle and a large number of the bacilli have not reached the pathogenic phase. This view has been maintained for many years by Ferran of Spain, one of the original contemporaries of Koch, who is in charge of the anti-tuberculous movement in his own country. Ferran showed long ago that the tubercle bacillus does not become virulent until it has developed a waxy capsule which protects it from the digestive action of the tissues. Thus isolated it is able to poison the organism with its subtle virus. But since in a given individual many of the bacilli have not reached this encapsuled and toxic stage it should be possible to make war on them before the deadly stage develops. This can be done to a certain extent and has always been done by outdoor life, etc., but Nature can be greatly aided by the use of a vaccine designed to destroy the bacillus in its harmless stage. Dr. Maher prophesies that in the near future no attempt will be made to attack the encapsuled bacillus but efforts of this nature will be concentrated on its precursor of the harmless and vulnerable phase. When a subject who harbors bacilli is in good health—and this is the rule—the presumption will be that the bacilli are in the harmless phase. Formerly we said that the germs while virulent were latent because of the good general condition and would flare up when the health depreciated. This explanation is one which does not explain. Ferran's doctrine furnishes the explanation—the man is spared because a majority of the bacilli have not developed into the virulent form. The author implies that this view will first be tested thoroughly on cattle and perhaps this has already been begun, but years may be required to ascertain whether permanent immunity has been secured.

TUBERCULOSIS, BOVINE. See VETERINARY MEDICINE.

TUFTS COLLEGE. A Universalist, co-educational institution at Tufts College, Mass., founded in 1885. The enrollment for 1920 was 2128.

There were 366 members in the faculty. The productive funds amounted to \$1,640,000, and the income for the year was \$202,000. The library contained 80,000 volumes. President, John Albert Cousens.

TULLOCH, ALEXANDER BRUCE. British soldier, died, May 25. He was born at Edinburgh, Scotland, Sept. 2, 1838; and educated at Sandhurst. He entered the military service in 1855 and had a varied career, serving in the Crimean War, India, the Indian Mutiny, the China campaign of 1859-60 and the Egyptian campaign of 1882. He was many times mentioned in despatches and was decorated and promoted for distinguished service. In 1904 he was *Times* correspondent in Manchuria. He wrote: *Recollection of Forty Years Service* (1903); *The Argentine Republic and its Neighbors* (1907); *The Highland Rising of '45* (1901); and *A Soldier's Sailing* (1912).

TULLOCH, W. W. British clergyman and author, died January, 1920. He was born at Dundee, Scotland, Sept. 25, 1846; educated at Madras college and St. Andrews university; was ordained in 1871; and was a minister in Glasgow from 1897 to 1901. He wrote the *Story of the Life of Queen Victoria*; the *Story of the Life of the Prince Consort* and other biographies.

TUNIS. A French protectorate on the Mediterranean coast, east of Algeria, known as the regency of Tunis. It is bounded on the south by the desert of Sahara. Area, estimated from 50,000 square miles to 64,600 square miles; population, estimated in 1914 at about 1,940,000 of whom the majority are Bedouins, Arabs and Kabyles (1,740,194 in 1918). The French population in 1913 was about 48,000; Italian, 112,000. The other elements in the foreign population were Anglo-Maltese, Spaniards, Greeks, Turks, and Jews, (the last-named placed at 50,583). Capital, Tunis, with a population of 161,718 of whom 67,129 were Moslems; 44,237 Italians; 26,491 Jews; and 17,875 French; but the estimates varied and some placed the total population of the city much higher. According to the latest available figures for education, there were about 301 public schools and 27 private schools with an enrollment of 40,349. The main sources of wealth are agriculture and mining, but foreign trade has become increasingly important of late years under French direction. The chief agricultural products are wheat, and other cereals; olives, grapes, dates and other fruits; wine and olive oil. Cereal crops in 1919 were given as follows: Wheat, 6,500,533 bu.; barley, 5,428,223 bu.; oats, 3,444,722 bu.; the wine yield in 1919 was 518,000 hectoliters. The estimates for 1920 for cereal crops and wine were as follows: Wheat, 110,000 metric tons; barley, 60,000; oats, 22,000; millet, 5000; wine, 418,000 hectoliters. Raising live stock is also important, including especially cattle of superior quality in the north, and sheep and goats in the southern and central parts. Wool is in much demand for the manufacture of native textiles, and in 1919 the entire clip was taken over for that purpose. (See AGRICULTURE). The minerals include phosphates, iron ore, lead, zinc, manganese, lignite, etc., and mining has lately shown a steady increase. The forest lands which are controlled by the state are found chiefly in the northern and central regions. The manufacturing industries include saddlery, shoemaking, textile weaving, dyeing, and the manufacture of per-

fumes, silk, and cotton. No later figures for commerce and finance, etc., were available than those given in the preceding YEAR BOOK. Reigning Bey, at the beginning of 1919, Sidi Mohammed; French resident general, Etienne Flandin.

TUNNELS. During the year 1920 owing to the limited available resources of American and other railways, comparatively little was done in the way of tunnel construction. For rapid transit and municipal and state highways, however, there was distinct progress, especially in and about New York and at Pittsburgh. At New York tunnel construction for the great subway systems continued and a comprehensive project for future development proposed still further work which is referred to briefly below and also under RAPID TRANSIT (q.v.). There was, however, at New York the important Hudson River vehicular tunnel, work on which was begun during the year and which presented interesting problems, not only in construction but also in ventilation, as it was necessary to deal with the exhaust gasses from the motor vehicles by which it would be used. The same problem was also present in the highway tunnel under construction at Pittsburgh, which was a needed and useful municipal development. A few other notable tunnels were under construction or proposed, to which reference is made below.

HUDSON RIVER VEHICULAR TUNNEL. The preparation of plans, specifications and contract forms for the construction of the four permanent ventilating shafts of the Hudson River vehicular tunnel was authorized May 25th by the bridge and tunnel commissions of the States of New York and New Jersey and the work proceeded so that contracts for the first shafts were awarded.

The Governor of New York on May 24 signed the bill making available another \$1,000,000 for this subaqueous interstate vehicular route. New York's first \$1,000,000, of which about \$100,000 had been spent, was appropriated in 1919. In this same year New Jersey also provided \$1,000,000 for the work and in 1920 the State legislature passed over the Governor's veto a bond-issue bill for \$28,000,000, half of which was to be applied to tunnel construction and half to the proposed Camden-Philadelphia bridge. (See BRIDGES.) This \$28,000,000 bond issue was referred for a referendum vote of the New Jersey electorates on Nov. 2, 1920, and by them was overwhelmingly approved.

The question of widths of roadway in the tunnel, about which there had been a great deal of discussion, was settled by the joint commissions adopting the 20-ft. roadways originally recommended by Clifford M. Holland the chief engineer.

After five contractors had submitted bids on September 21 for the construction of two of the ventilating shafts the lowest bid, that of Thomas B. Bryson, amounting to a total (official) of \$650,802.50 was accepted and the contract awarded. This contract actually provided for construction work by the two state commissions created to administer jointly the project. It covered the construction of two ventilating shafts at the Manhattan end of the tunnel located respectively at Canal and Spring Streets, near Washington Street. These shafts were rectangular and involved the sinking of two caissons consisting of steel walls filled with concrete. Measured to the outside of the cutting edge of

the caisson, both shafts had sections 47 ft. 1½ in. by 42 ft. 5½ in. The thickness of the concrete filling in the walls was 5 ft. 1½ in.

These two shafts were to form permanent ventilating openings connecting with the tubes. The present contract does not involve any equipment. The Spring Street shaft was designed to be about 54 ft. deep, while the Canal Street shaft was to be 60 ft. deep.

NEW YORK RAPID TRANSIT TUNNELS. In 1920 there were 34 single-track river crossings connecting Manhattan with The Bronx, Queens and Brooklyn. The proposed plan of the Chief Engineer of the Rapid Transit Commission contemplated 42 single-track additional river crossings. These crossings would be accomplished by tunnels and the project would involve 21 new two-track tunnel lines under the waters surrounding Manhattan and connecting Manhattan with The Bronx, Queens, Brooklyn and Richmond. These tunnels would present little in the way of construction in view of the great experience gained in sub-aqueous tunnelling about New York City. See RAPID TRANSIT.

PITTSBURGH TUNNEL. During the year construction was well advanced on the Liberty Tunnel through the South Hills, Pittsburgh. Notable both in its size of cross-section and in its length this tunnel was to afford the largest highway tunnel so far undertaken, providing two separate roadways, each for two lines of traffic with space for street cars. The length from portal to portal was 5715 ft. The tunnel was being excavated in good shale and the cross-section of each of the two tubes was of horse-shoe form with semi-circular roof arch 13 ft. 3¼ in. in radius and sidewalls 7 ft. 2 in. high above the crown of the roadway.

According to the original contract plans the tunnel excavation was to be timbered with arch sets of 12 x 12 timbers outside the neat line of the concrete lining, for the support of the rock. An interesting development was that it proved cheaper to use 8-in. Bethlehem steel H-beams cut to form segments as for timbering.

Unlike the Hudson River tunnel which was designed largely for commercial use, the new Liberty Tunnel will serve a district of purely residential character, embraced in the suburbs West Liberty, Beechview, Brookline, Dormont, Mt. Lebanon and adjacent territory, which lie beyond the south portal. There the problem was not of future industrial growth but of increased passenger vehicle traffic as the only freight transport through the tunnel would be that required for building materials and for the domestic services of the district. Accordingly the minimum capacity deemed necessary in the plan was one two-line roadway in each direction, but this would not be fully utilized for many years, and in the interval another tunnel might be built, reaching another part of the South Hills district.

The tunnel capacity was estimated at 1690 vehicles per hour in each direction, at the maximum or two lines of vehicles, both traveling at 15 miles per hour, vehicles 100 ft. apart in each line. The ventilation calculations were based on this estimate of capacity.

The Pittsburgh tunnel was the first large highway tunnel in which the problem of dealing with automobile exhaust had to be solved, and there was no precedent to guide the engineers in providing adequate and essential ventilation, though as already suggested this was also a vital ques-

tion for the Hudson River vehicular tunnel. With 114 automobiles in either tube of the tunnel at any one time (in maximum traffic), the heaviest load would be fairly represented by assuming a gross weight of two tons per vehicle. Since a vehicle of two tons traveling at 15 miles per hour represents a transportation unit of $\frac{1}{2}$ ton-mile per minute, the carbon monoxide emission, taken at 3.0 cu. ft. per ton-mile, would be 1.5 cu. ft. per vehicle per minute, or 170 cu. ft. per minute for each tube of the tunnel. Assuming from experimental data that a carbon-monoxide content of six parts per 10,000 at the exit (or half that quantity average) would be allowable, it was considered to be necessary to supply 280,000 cu. ft. of fresh air per minute to each tube. Accordingly the system designed by Saccardo for ventilating tunnels in Italy was adopted, with some modifications, such as had been practised successfully in ventilating a large number of American railroad tunnels. Here air was forced in at one end of the tunnel through suitable lateral nozzles in the side walls located near the entrance end and facing toward the other end of the tunnel, which itself forms a ventilation duct. The ventilating currents move with the traffic. An emergency maximum pumpage of 280,000 cu. ft. of air per minute per tube, or a normal maximum of 200,000 was provided in the design of two air-pumping plants to be located one at the entrance of each tunnel. With the normal pumpage the discharge velocity at each nozzle would be 2940 cu. ft. per min., or about 33 miles per hour and with the maximum pumpage the discharge velocity would be 4210 ft. per min., or about 47 miles per hour; this maximum would be needed only in cases of emergency.

PROPOSED COLORADO STATE TUNNEL. A constitutional amendment authorizing Colorado to construct the three tunnels through the mountains, as proposed by the State Railroad Commission (see 1919 YEAR BOOK, article "Tunnels") and also authorizing the issuance of bonds for the work, was defeated at the general election of November 2. This did not lead to the abandonment of the plan by its advocates who straightway put under way a movement to bring before the legislature another proposal to construct the tunnels. One plan proposed was to authorize by act of the legislature the formation of tunnel districts similar to irrigation districts, and to then permit any district to vote on the question of bonding itself for the tunnel construction. This plan aimed to make it possible to finance a tunnel on the credit of those sections of the State that would be most directly benefited, without reference to other parts of the State.

SHIMONOSEKI STRAIT TUNNEL. It was announced during the year 1920 in connection with the proposed Shimonoseki Strait Tunnel discussed in the 1919 YEAR BOOK, that a Japanese commission, was being formed to make a study of American and European tunnel-construction practice with a view to securing the fullest information on the cost and main construction problems in the proposed 10-mile tunnel under Shimonoseki Strait. This tunnel would be an important commercial link connecting as it would the main island of the Japanese group with the island to the south on which the city of Nagasaki is located and where there had been large industrial development.

HETCH HETCHY AQUEDUCT. One of the elements of the new project to increase the water supply of San Francisco under construction in 1920, was an 18-mile tunnel. At the end of the year about four miles had been excavated and the six headings were being advanced daily at the following rates: Priest, 14 ft.; Big Creek east, 7 ft.; Big Creek west, 7 ft.; South Fork east, 9 ft.; South Fork west, 12 ft.; Early Intake, 10 ft. It was planned within two months to open four new headings and the work then was expected to progress at the rate of 3000 ft. per month. See **AQUEDUCTS**.

KERCKHOFF TUNNEL. During the year rapid progress was made on the Kerckhoff tunnel, under construction to supply the new Auberry (Cal.) plant of the San Joaquin Light & Power Corp. Work on this tunnel, which is 18,000 ft. long and 17 x 17 ft. in section was begun in June, 1919, and so rapidly was it pushed that the plant was put in service on August 15, 60 days ahead of schedule, and being it was claimed the first hydro-electric project to be started and completed since the end of the war. The tunnel construction was attacked from a number of headings reached from the portals and two adits. Considerable speed was secured in the execution of the work as the contractors and the crews on different headings were encouraged to compete with one another. Prizes or bonuses were awarded for the longest round pulled, the greatest progress on a weekly basis, and the first hole through to the opposing side. The various progress measurements were checked by an engineer not particularly connected with the tunnel work, so that no partiality could be claimed by any one crew and the records for long breaks in a 17-ft. x 17-ft. tunnel and for driving 1343 ft. in three months were claimed as unique in American tunnel excavation.

Another interesting record of tunnelling progress mentioned in the technical press of the year was an advance of 484 ft. in 432 hours working time made in October, 1919, in the 8 x 8 ft. drift of the Holmes mine, one of the Cleveland-Cliffs Iron Co.'s properties situated at Ishpeming, Mich. The rock pierced was diorite, hard and dense. Drilling per round required from 17 to 19 holes aggregating more than 100 ft.

During 1920 there was published or at least made available outside of Germany the fourth edition of Brandau's *Vorarbeiten, Erd-, Grund-, Strassen- und Tunnelbau*.

TURBINE, STEAM. See **STEAM TURBINE**.

TURKESTAN. A division of Russia in Central Asia, comprising the provinces of Samarkand, Fergana, Syr-Darya and Semirychensk, with a total area of 420,807 square miles; population, Jan. 1, 1915, estimated at 6,684,400. Chief towns: Tashkent, 271,650; Kokand, 113,700; and Omsk, 129,422. Also a dependency of China, lying to the north of Tibet with an area of about 550,340 square miles and a population of about 1,200,000. Chief towns, Khotan, Kashgar and Yarkand.

TURKEY, formerly the **OTTOMAN EMPIRE.** A country of Asia Minor, bordering the eastern shore of the Mediterranean; its limits and political status, which were subject to adjustment by the Peace Conference were still indeterminate at the close of 1920.

AREA AND POPULATION, etc. Turkey in Europe after the Balkan wars was reduced from an area of 65,350 square miles to 10,882 square miles and

from a population of 6,130,200 to 1,891,000. Turkey in Asia comprised Anatolia, Arabia, Kurdistan, Mesopotamia, Palestine, Syria and certain islands of the Mediterranean. The Asiatic dominion before the late war had an area of 602,842 square miles and a population of 18,992,900. Under the Treaty of Sevres, May 11, 1920, the modification of which was under discussion at the close of the year, there was a still further reduction of the Turkish territory. Under this Turkey was required to cede Thrace and Smyrna to Greece; Mesopotamia, Palestine, Syria, Armenia and the Hedjaz were to be independent; Kurdistan was to be self-governing; and the Dodecanese, Castellorizo were to be ceded to Italy. (See below under HISTORY and WAR OF THE NATIONS.) The estimated loss in square miles was about 438,750, and in population about 12,000,000. The population of the chief towns in the former Ottoman empire was estimated as follows: Constantinople, 1,000,000; Smyrna, 375,000; Damascus, 250,000; Aleppo, 250,000; and Bagdad, 225,000. No later figures for production, etc., were available than those given in preceding YEAR BOOKS.

COMMERCE. No recent figures for the foreign trade were available but from a British source the following items pertaining to 1918-19 were supplied: In 1918 the imports into the United Kingdom were £694,715; exports from the United Kingdom into Turkey, £1,811,784; imports into the United Kingdom in 1919, £9,458,103; exports from the United Kingdom into Turkey, £22,124,946. In 1913-14, the total Turkish imports from all countries were £40,809,680, and the exports £21,436,120.

SHIPPING. The following information was supplied by the United States Bureau of Foreign and Domestic Commerce: Prior to 1914 efforts were made in Turkey to nationalize the merchant marine. Various companies were formed for that purpose, but these could not obtain the necessary capital and ceased to exist. Indeed, companies which had already been established suffered considerable losses. The special efforts made directly by the Turkish government to enlarge its merchant marine came to an end with the outbreak of the war. Owing to the damages sustained by the war, the Turkish merchant marine practically ceased to exist. The losses incident to the war (mainly by sinking) were estimated at almost 70,000 tons, including steamships and sailing vessels. The tonnage still remaining was

The first regular budget for Turkey was established by Djavid Bey, Minister of Finance, after the success of the Young Turk Party in 1908. The expenditures amounted to 30,000,000 Turkish pounds, against 25,000,000 revenue. In the case of this and all other Turkish budgets the actual performances did not correspond satisfactorily to the budget estimates. The government tried to put its finances in order. It placed Sir Richard Crawford in charge of customs and Mr. Laurent in charge of finances. Three financial inspectors who had served on the Reform Commission in Macedonia were engaged in the fiscal service. These measures, however, did not prevent the budget deficit from increasing each year during the period 1912-1918. In the face of these and previous deficits Turkey had recourse to foreign loans. After the conclusion of the Berlin treaty it was planned to establish a serious control over the finances, but Turkey objected and this project was abandoned. According to the ninth article of the Berlin treaty Serbia, Bulgaria, Montenegro, and Greece were to be charged with part of the Turkish debt, but this was not applied and these countries paid nothing. Later negotiations begun in Constantinople resulted in creating the Dette Publique Ottomane by virtue of an imperial decree of December 20, 1881, called the Decree of Mouharem. After that the management of the financial affairs was on a more satisfactory basis and the Turkish debt was progressively moderated. Various revenues were granted to the Dette Publique Ottomane, whose council was represented by British, French, Dutch, German, Austro-Hungarian, Italian, and Ottoman delegates. The Dette Publique Ottomane did not limit itself to simply collecting and then applying the revenues. It initiated effective measures to develop silk growing and vine culture, whose revenues greatly increased. Important betterments were also introduced in the fishing industry.

All the revenues managed by the Dette Publique Ottomane increased in value, and its administration gained public confidence. In fact, the Young Turk Government was so interested that it proposed to intrust the Dette Publique with the entire collection of Turkish tithes, but the outbreak of the war prevented this. In the table below are given statistics from recent budgets. The normal value of the Turkish pound is \$4.40, but in 1919-20 it was much depreciated.

Years ending Mar. 13—	Actual receipts	Actual expenditures	Actual deficits	Financial operations of the government for meeting the deficit
	Turkish pounds	Turkish pounds	Turkish pounds	
1912.....	27,269,751	29,908,282	2,638,531	4 per cent. loan of 7,040,000 pounds.
1913.....	27,544,759	38,919,877	10,475,118	Advances and treasury bonds for 11,000,000 pounds.
1914.....	29,201,865	35,329,950	6,128,085	1914 loan of 17,600,000 pounds.
1915.....	24,739,164	57,841,339	33,102,175	Paper money issues, 26,369,189 pounds.
1916.....	27,826,793	65,546,105	43,219,312	Paper money issues, 106,879,927 pounds.
1917.....	25,199,526	82,980,780	57,781,254	Paper money issues, 32,006,455 pounds.
1918.....	*85,226,362	Paper money issues, 2,499,925 pounds; Ottoman interior loan, 18,000,000 pounds.
1919.....	*94,509,235	

* Estimated.

estimated at about 50,000 tons, all of which was employed in the coastwise trade. The Turkish government was believed to have reimbursed the owners for the greater part of the vessels lost during the war.

FINANCE. The following information was published in American Commerce Reports in 1920.

GOVERNMENT. The Sultan in 1920 was Mohammed VI, succeeding to the throne July 3, 1913. The ministry in 1920 (April-October) was constituted as follows: Grand Vizier and Minister for Foreign Affairs and War, Damad Ferid Pasha; Sheikh-ul-Islam, Mustapha Sabri; Home Affairs, Reshid Moukhtar Pasha; President of

the Council of State, Riza Tewfik Bey; Navy, General Hamdi Pasha; Justice, Rushdi Effendi; Public Works, General Zeki Pasha; Public Instruction, General Hadi Pasha; Pious Foundations, General Hilmi Pasha; and Commerce and Agriculture, Jemal Bey. For ministerial crises see below.

HISTORY. The Nationalists under Kemal had set up a government at Angora which deprived the Sultan of any real authority over the whole of Anatolia. The Constantinople parliament in January was believed to represent only about 15 per cent of the population and it not only had the Nationalist difficulty to contend with but there was a constant agitation under the Committee of Union and Progress for the union of all Mohammedan powers on the one hand and for an alliance with Bolshevik Russia on the other. By January 1 the army of the Nationalists in Anatolia was reported to have increased to 300,000 men. The central government found itself in an embarrassing position, being threatened by the Allies on the one side and by the Nationalists on the other. Moreover, it appeared in the winter that there was disloyalty in the cabinet itself, where it was said that the minister of war, Djemal Pasha was secretly aiding the rebels. The Allies demanded his resignation. In the Chamber opinion was divided among the supporters of the nationalist movement in Anatolia, the old unionists and the independents, and none of these groups had a majority. The ministry resigned March 2 and a new cabinet was formed under Saleh Pasha as Grand Vizier, but though it was reputed to be more friendly to the Allies it did not solve the difficulty. During the winter the Nationalists were reported to have massacred the Armenians and made attacks on foreign troops. A French-Italian army occupied Constantinople March 16, and the Turks were informed that this occupation would last until the terms of the treaty had been accepted and carried out. Many Nationalist leaders were placed under arrest at this time. The Saleh cabinet resigned and was succeeded April 6 by a cabinet under the prime ministry of Damad Pasha.

By the terms of the treaty of Sèvres, which was handed to the Turkish delegates May 1, the Turkish power in Europe was limited to Constantinople; to Greece was assigned Thrace as far as the Tehatalja lines; and to an International Commission was assigned the territory adjoining this line, while the Straits were made neutral. Thus Turkish sovereignty was limited to Asia Minor, but even here there were the following exceptions: The port of Smyrna was placed under international control while the city and surrounding district passed under a Greek administration subject to Turkish sovereignty, but a plebiscite to be held after five years was to determine the permanent status; Kurdistan was to be self-governing under Turkish sovereignty for two years; Armenia was recognized as an independent state, whose boundaries, as subsequently decided at the close of the year, were to be determined by President Wilson; Arab and Syrian territories in the south were to be free from Turkish sovereignty. For details see WAR OF THE NATIONS.

After the treaty of Sèvres the Turkish Nationalist troops began a campaign for the purpose of effecting a revision of it. They gained some successes at the expense of the French forces in

Cilicia, forcing them to retire to the coast. The time for signing the treaty was extended for two weeks in June and then owing to difficulties between Italy and Greece over the Dodecanese there was some further delay. The Turkish delegates arriving in Paris at the end of June asked for various modifications, some of which were extreme. Certain changes were made, however, and the treaty was returned with the warning that if it were not accepted and executed, the Turks would finally be driven from Europe. After this the Greeks to whom had been assigned the task of expelling the Turks from Thrace and Smyrna, carried out their campaign successfully. This brought the Turks to terms and they signed the treaty of Sèvres on August 10.

A difficulty arose in the cabinet in September, resulting in the change of the office of the Sheikh-ul-Islam (September). On October 18 the Damad cabinet, unable to meet the necessity of an immediate ratification of the treaty, retired and a provisional cabinet was formed October 22 under Tewfik Pasha, as Grand Vizier, as follows: Minister of War, General Zia; Interior, Marshal Izzet; Navy, Marshal Saleh; Foreign Affairs, Sefa Bey; Agriculture, Kiazim Bey; Sheikh-ul-Islam, Nury Effendi. The new government appeared to have little authority and there were continued reports of the increasing strength of the Nationalists under Kemal who, it was said, would fight on until the Sultan became a free agent and Turkish territories were restored. At the beginning of December the Tewfik government was negotiating with the Allies for a modification of the treaty. Meanwhile the terms of the secret agreement among the Allies formed at the time when the treaty was drafted were made public. (See WAR OF THE NATIONS.) The return of ex-King Constantine to Greece was believed to make the modification of the treaty inevitable. The Turks also believed that France would come to terms with the Nationalists.

The following report of the agreement between Kemal and the Bolsheviks was published by the British and French governments, November 23:

- "1. To insure the territorial integrity of Turkey and restore Turkish administration in the regions inhabited by Turks.
2. Turkish control is to be established in the new States of Arabia and Syria.
3. Facilities are to be accorded Russian delegates with a view to the development of communism in Turkey.
4. Russia and Turkey agree to "liberate Moslem countries, such as India, Algeria, Egypt, Morocco and Tunisia, from the foreign yoke" and grant them independence.
5. Russia recognizes the independence of Moslem States in her territory, and guarantees their integrity.
6. Russia agrees to grant financial and material aid to Turkey.
7. Russia agrees to dispatch two army corps, followed by more if necessary.
8. Hostilities may be continued against the Entente without previous reference to the National Councils of both countries."

At the end of November Kemal offered terms to the Armenian government at Erivan and on December 2-3 an armistice was formed containing according to Near East Relief headquarters in New York the following provisions:

"Under the armistice terms, all troops except officers and six soldiers in Karakliss were to withdraw eleven miles from the zone. Refugees are permitted to return into the area, but it was not known whether any guarantee of their safety had been provided. The Armenians were to deliver to the Turks 2,000 rifles, sixty machine guns, two locomotives and 560 cars." See

ARMENIA; WAR OF THE NATIONS; NAVAL PROGRESS; AGRICULTURE.

"A neutral zone, about sixty-eight miles long, had been provided for between Sanain and Alaguez, the second highest mountain in Armenia, and thirty-four miles northwest of Erivan, the Armenian capital. Other boundaries were unknown in Sanain. A commission of three Turks and three Armenians, to control the neutral area, was to arrive Dec. 6.

The territory in the neutral zone includes the important Armenian city of Alexandropol, and Karakiss, Delijan, Habamloo, Bash-Abaran, Akhta, Khouroum, Bandamal and a score of other towns.

MEDIATION IN AMERICA. On December 16, President Wilson announced that he had appointed Mr. Henry Morgenthau as mediator. On December 26, Lloyd George called attention to the report that Armenia was under Soviet control. In the circumstances it did not seem practicable that the President should address himself first to the Armenians and the Turks. The immediate cause of the difficulty between the two parties was the treaty of Sèvres, certain factions having failed to accept it on the one hand, and the Allied Powers having failed to enforce it on the other.

TUSKEGEE INSTITUTE. A non-sectarian co-educational normal and industrial institution for the higher education of negroes, at Tuskegee Institute, Ala. It was founded in 1881 by Booker T. Washington. There were 622 students enrolled for the summer session and 1854 for the regular fall session. The faculty had 230 members. The library contained 24,000 volumes. A new building, The Ellen James Hall for girls was completed. Principal, Robert Russa Moton, LL.D.

TUTHILL, RICHARD STANLEY. Judge, died, November 30. He was born at Vergennes, Ill., Nov. 10, 1841, and graduated at Middlebury College, Vt., in 1863. During the Civil War he served as a scout under General John Logan and was afterward in the artillery in the Army of Tennessee. After the war he was admitted to the bar and practiced for several years in Kentucky and then settled at Chicago, where he was City Attorney, 1875-9, and United States District Attorney from 1884-6. After 1887, he was Judge of the Circuit Court of Cook County, Ill. After the Juvenile Court Law was passed, 1889, he was chosen to organize the court and hold its sessions. He did so for the next six years, the court serving as a model for similar institutions throughout the country.

TWINING, PHILIP GEOFFREY. British general and engineer, died April 15. He was born at Halifax, Nova Scotia, Sept. 7, 1862, and educated at Kingston, Canada. He entered the Royal Engineers in 1886 and served in Canada, Africa and the Far East. During the European war he was several times mentioned in despatches and was raised to the rank of major-general, Jan. 1, 1917. He contributed extensively to the periodicals.

TYPHOID FEVER. For the past eight years the *Journal of the American Medical Association* has published an annual report of the status of typhoid fever in the United States. The last report, covering the year 1919, appears in the issue of March 6, 1920. The statistics cover all cities of more than 100,000 inhabitants. The death rate from typhoid is steadily diminishing in these cities and if the present rate of decrease is maintained the disease will eventually become extinct. Fifteen years ago the average rate was about 20 per 100,000 inhabitants and at present it is well below 10. The deaths of 1919 may be profitably contrasted with those

of 1918. The nine largest cities with the sole exception of Philadelphia show a decrease over the the previous year, and in all of these the death was under 10 per 100,000. The mortality at Baltimore and Detroit was the lowest in the history of these cities, while in Chicago, Boston, New York and Cleveland the rate was phenomenally low. Thus in Chicago, for example, with a population of 2,500,000 there were but 31 deaths from typhoid during the whole of 1919. In the smaller cities there was a decline in all but two. Kansas City remained stationary while in Memphis as the result of an extensive epidemic, the rate reached 58. Birmingham showed a rate of 15. Aside from these exceptions the figures varied from 0 in Spokane up to 10. In Scranton, Worcester, Fall River, Oakland, Toledo and Richmond it was below four per 100,000. The improvement in some of the cities followed improvement in the purity of the drinking water, while the higher figures in other cities could be attributed to water and milk contamination. Thus in Memphis the high rate was attributable wholly to impure water. A very large number of city dwellers contracted the disease while in the country. Much of the improvement in the death rate of the past few years is attributable to anti-typhoid immunization as practiced on the troops during the war.

In an editorial article in the *Medical Record* for Nov. 27, 1920, attention is called to the severe epidemic now raging in Poland and Galicia, which must be regarded as an international danger. During the war and thus far after it, western Europe has been protected from the scourge, although until comparatively recent times there were endemic foci in Ireland. Russia, including the western portion, is swarming with typhus victims and the movement now under way to repatriate 300,000 Letts from Russia to Lithuania is expected to extend the disease. These are mostly infested with vermin and are quarantined and disinfected in buildings close to the railway stations at which the repatriates disembark. Upon the thoroughness of this work depends the safety of Western Europe during the coming winter, for typhus is a winter disease. All crossing places between Western Russia and Central Europe must be guarded in similar fashion in the interest of prevention and the frontier between Poland and Galicia and the countries west of them is of course being vigorously quarantined. Despite the efforts of Germany and Czecho-Slovakia in this direction infection will doubtless be borne to the latter countries. The presence of a few cases need cause no alarm for during the war the Central Empires successfully combated the spread of disease, despite the presence of a few score or few hundred cases. Typhus has throughout been kept out of Switzerland by combating lousiness among the native population. This was done by inspection of lodging houses which shelter the floating population. The inspection is carried out periodically and both lice and bedbugs are exterminated on each visit. It is a moot question whether the head louse as well as the clothes louse can disseminate the disease. The former is said to be especially abundant at present, at least in England, and no pains will be spared in ridding children from it.

According to the daily press of December 8, the Commission on Economics of the Assembly of the League of Nations in session at Geneva made typhus fever the subject of a special dis-

cussion. The passage through Poland since 1914 of more than 200,000 prisoners of war and refugees was said to have been primarily responsible for the diffusion of typhus westward. War against typhus in the Near East occupied almost the sole attention of the Assembly during the forenoon session of Dec. 7. The debate was widespread in scope and representatives of all climes and races took part. Sir G. E. Foster of Canada made a ringing appeal to the world to stamp out the disease which, he stated, was gradually spreading over Europe. About one and a quarter million dollars were subscribed to finance the campaign. The Persian delegate made the announcement that the law of epidemic movement from East to West had been reversed and that Russian typhus was now a menace to Persia and other Asiatic states, with the likelihood of reaching China and India in force.

UGANDA PROTECTORATE. A British protectorate in East Africa to the north of the former German colony of German East Africa. Total area, 110,300 square miles, including 16,377 square miles of water; population March 31, 1919, 3,318,217, which was composed chiefly of natives who numbered 3,313,908. It is divided into five provinces, namely: The Eastern; Rudolf; the Northern; the Western; and the province of Buganda. Total imports (1917-18) £1,296,100; exports £1,076,904; revenue (1919-20) £495,548; expenditure, £465,117. Governor and commander-in-chief, Sir R. T. Coryndon.

UKRAINE. A portion of Russia known also as Little Russia, comprising for the most part the Russian provinces of Podolia, Volhynia, Kiev, Poltava, Chernygov, Ekaterinoslav and Kharkov, together with parts of adjoining provinces. The territory claimed by the Ukrainians, however, covered a wider extent, reaching from the Caspian Sea on the east to the Black Sea, embracing a large part of Southern Russia. The area, including the regions claimed was placed at 498,100 square miles with a population of 46,000,000, of whom 32,662,000 were classed as Ukrainians; 5,376,800 Russians; 3,795,760 Jews and 2,079,500 Poles. Other estimates placed the Ukrainians at a much lower figure. By far the great majority of the people belong to the Ukrainian Orthodox church, but there were besides 6,847,140 Greek Catholics; 4,500,000 Russian Orthodox; 3,800,000 Jews; and 2,000,000 Roman Catholics. In 1918 the elementary higher schools were placed at 1162. It was estimated that about 60 per cent of the children of school age were in attendance. In 1918 the budget was as follows: Revenue, £80,644,000; expenditure, £115,000,000. The chief industry has been the manufacture of sugar. The independence of Russian Ukraine was proclaimed soon after the outbreak of the Russian revolution (Nov. 21, 1917); and of Austrian Ukraine (Nov. 19, 1918). A provisional government was established Dec. 14, 1918, and consisted of a directory of five members, acting through a responsible ministry, which was to hold office until a parliament had been constituted. Eastern and Western Ukraine were united Jan. 3, 1919. The allied Powers recognized Ukraine's independence in 1919. For further details in regard to the movement of the Ukraine, for independence, see preceding YEAR BOOK. President of the directory, at the beginning of 1920, Simon Petlura. See WAR OF THE NATIONS.

UNAFLOW ENGINE. See STEAM ENGINE; STEAM TURBINE.

UNEMPLOYMENT. In the United States complete figures for the year were not available. In the first part of the year conditions were better than at the same period of the year before. From reports of the Bureau of Labor Statistics based on returns from representative establishments in 13 manufacturing industries it appeared that in 11 industries there was an increase in the number of persons employed, while in 2 there was a decrease. The largest increase, 58.7 per cent, was shown in men's ready-made clothing, and the decreases, 5.8 and 4.6 per cent, appeared in car building and repairing and in cigar manufacturing, respectively. All of the 13 industries showed an increase in the total amount of the pay roll for April, 1920, as compared with April, 1919. The most important percentage increases, 151.2, 90.7, and 81.1, appeared in men's ready-made clothing, woolen, and hosiery and underwear, respectively. The large increases over the preceding year were due in part to a rise in volume of employment and in part to a recovery from decline.

After the marked curtailment of production in the early autumn, large bodies of workmen were thrown out of work in many cities. Estimates appeared in the press of the number at specific points but comprehensive and exact figures were not available. In Detroit in December 75,000 men were reported out of work, in Bridgeport, Conn., 15,000. In the New England Textile industries the majority of the mills adopted a working schedule of three or four days a week. In September statistics on a number of important industries showed decreases in the employment ranging from 4 to over 14 per cent, and there were indications of rapid acceleration in the rate from that time on.

GREAT BRITAIN. The Ministry of Labor figures showed that the unemployed on the registers of the employment exchanges on December 31, 1920, numbered 499,567 men, 188,104 women, 28,702 boys, and 31,653 girls, a total of 748,026, an increase in three months of about 400,000. The distribution by Trades according to the registrations at the labor exchanges, December 10, was given as follows: Engineering and iron founding, 88,000 (of these 21,000 are laborers); general laborers, 81,000; transport trades, 52,000; building trades, 42,000 (of these 16,000 are painters and laborers); textile trades, 24,000; clothing trade, 22,000; domestic servants (women), 26,000. In addition there were 88,042 persons on short time drawing out-of-work donation or unemployment insurance benefit. Of these, 50,474 were in the cotton trade, 15,325 in other textile trades, 8,555 in clothing and boot and shoe trades, and 4,510 in engineering and iron founding. The total number of unemployed greatly exceeded the figures given above, which represent only those who applied to the employment exchanges for work. During the year 8,000,000 workers came under the unemployment-insurance plan, and from the time of the armistice £35,000,000 had been dispensed by the government in out-of-work donations. See GREAT BRITAIN.

UNION COLLEGE. A non-sectarian institution for the education of men at Schenectady, N. Y. founded in 1795. The enrolment for the fall of 1920 was 612 students enrolled and 325 in the extension courses. The faculty numbered 51, including one new member. The productive funds amounted to \$1,695,921 and the income

for the year was \$231,855. There were 50,000 volumes in the library. President, Charles Alexander Richmond, LL.D.

UNITARIAN CHURCH. Statistics for 1920 showed that this denomination had 456 churches in the United States and Canada, 83 parish houses, 85 parsonages, 497 ministers, and 43,242 members. As only a little over half the churches reported figures for the number of members, the latter figure is not correct for the entire church. It is estimated that there are 75,000 communicants. *The Christian Register* is the chief Unitarian periodical, and besides the denomination publishes *The Beacon*, *The Pacific Unitarian*, and *Unitarian Word and Work*. Three academies are maintained and three divinity schools, one being the Divinity School of Harvard University, Cambridge, Mass. The government of the denomination is under the American Unitarian Association, whose president is Dr. Samuel A. Eliot, and secretary, Rev. Louis C. Cornish. Headquarters are maintained at 25 Beacon Street, Boston, Mass. Churches as well as missionaries are maintained in Africa, Australia, Great Britain, New Zealand, Tasmania, Denmark, Norway, Sweden, Iceland, Japan, Palestine, India, Holland, Switzerland, Belgium, France, Bulgaria, Egypt, Germany, Italy, Jamaica, Russia, China, and Brazil. Home missionary work is carried on among the American Indians in the United States.

UNITED BRETHREN IN CHRIST. This denomination consists of two branches, the Church of the United Brethren in Christ, and the Church of the United Brethren in Christ (Old Constitution). It was founded in 1768 by Phillip W. Otterbein, a missionary of the German Reformed Church. Later, in 1800, the denomination was reorganized on a permanent basis. The latest available statistics for the Church of the United Brethren in Christ were those of 1919: 347,981 church members, 2403 ministers, 3498 churches, 3223 Sunday Schools with 410,149 Sunday School pupils, 1219 parsonages, 2367 Young People's Societies, with a membership of 89,562. The estimated value of churches was \$15,433,558.23, while parsonages were valued at \$2,756,396.27. Contributions for all purposes during the year amounted to \$4,530,352.12. The United Enlistment Movement, conducted during 1920 to strengthen the church, proved very successful and aroused much enthusiasm for the continuance of the church work. A publishing house is maintained in Dayton, Ohio, where *The Religious Telescope*, and *The Watchword* are published. Seven colleges and theological seminaries are maintained, including Otterbein University at Westerville, Ohio.

The Old Constitution Church had in 1919 about 20,000 communicants. Three colleges are maintained, and the principle periodical is *The Christian Conservator*, published in Ubee, Ind.

Figures for 1920 for both branches of the denomination showed 3977 churches, 2293 ministers, and 367,945 communicants.

UNITED KINGDOM. See GREAT BRITAIN.
UNITED METHODIST CHURCH. See METHODISTS, WESLEYAN.

UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA. The sixty-second general assembly of this denomination was held in Pittsburgh, Pa., in May, 1920. The "New World Movement," which was inaugurated the year before to secure "the dedication of life, the enlistment

of prayer, and the necessary funds to occupy and evangelize the fields, and equip and endow the educational and missionary work under the control of the denomination at home and abroad, according to the necessities of the present and immediate future," was carried on. Total contributions to October 21, 1920, were \$11,000,000, while the original was but \$10,000,000. Reports to May, 1920, show for the denomination, 979 ministers, 4679 ruling elders, 937 congregations, and 157,135 members in America; while reports in May, 1919, showed 840 Young People's Societies, and 962 Sunday Schools. The figures for 1920 show increase over those of 1919. Contributions for 1920 were as follows: salaries of ministers, \$1,075,002; congregational purposes, \$1,568,022; boards and missions of the church, \$1,006,541; benevolences to work outside the denomination, \$203,977; contributions to women's work, \$271,110; making total contributions of \$4,124,652, and average per member of \$26.24. The average salary of pastor was \$1772. For purposes of administration the presbyteries are divided into eleven synods. The church is the strongest in the Middle West. Dr. W. M. Anderson is moderator of the church, and D. F. McGill is the stated clerk, with headquarters at the Pittsburgh Theological Seminary.

UNITED STATES. AREA. Data compiled by the United States Geological Survey and made available in 1920 afford the most recent information in respect to area of continental United States. The gross area of the United States is 3,026,789 square miles. The land area amounts to 2,973,774 square miles, and the water area—exclusive of the area of the Great Lakes, the Atlantic, the Pacific, and the Gulf of Mexico within the three-mile limit—amounts to 53,015 square miles. The southernmost point of the mainland is Cape Sable, Fla., which is in latitude 25° 07' and longitude 81° 05'. The extreme southern point of Texas is in latitude 25° 50', and longitude 97° 24'. Cape Sable is therefore 49 miles farther south than the most southern point in Texas. A small detached land area of Northern Minnesota at longitude 95° 09' extends northward to latitude 49° 23'.

The easternmost point of the United States is West Quoddy Head, near Eastport, Maine, in longitude 66° 57' and latitude 44° 49'; the westernmost point is Cape Alva, Wash., in latitude 48° 10', which extends into the Pacific Ocean to longitude 124° 45'.

From the southernmost point in Texas due north to the forty-ninth parallel, the boundary between the United States and Canada, the distance is 1598 miles. From West Quoddy Head due west to the Pacific Ocean the distance is 2807 miles. The shortest distance from the Atlantic to the Pacific across the United States is between points near Charleston, S. C., and San Diego, Calif., and is 2152 miles.

The length of the Canadian boundary line from the Atlantic to the Pacific is 3898 miles. The length of the Mexican boundary from the Gulf to the Pacific is 1744 miles. The length of the Atlantic coast line is 5560 miles and that of the Pacific coast line is 2730 miles. The Gulf of Mexico borders the United States for 3640 miles.

Nearly all maps of the United States show the parallels of latitude as curved lines and are likely to lead the ordinary observer to believe that certain eastern or western States are farther north than some of the central States that are

actually in the same latitude. For this reason, one who is asked which extends farther south, Florida or Texas, is very likely to say "Texas," but, as stated, the mainland of Florida is nearly 50 miles farther south than the southernmost point in Texas. For the same reason, when we consider the geographic positions of countries south of the United States we find that errors are likely to be made in estimating position or extent in longitude. Few realize that the island of Cuba, for example, if transposed directly north would extend from New York City to Indiana, or that Habana is farther west than Cleveland, Ohio, or that the Panama Canal is due south of Pittsburgh, Pa., or that Nome, Alaska, is farther west than Hawaii.

POPULATION. The population of the United States according to the preliminary estimate of the Fourteenth Census was 105,683,108 on January 1, 1920, as compared with 91,972,266 in 1910 and 75,994,575 in 1900. This was an increase of only 14.9 per cent during the last decade as compared with an increase of 21 per cent during the preceding decade. The tendency of the population from country to city was greatly accentuated after 1910. In 1920 more than one-half of the entire population was living in urban territory, that is to say, 54,816,209 or 51.9 per

cent were living in incorporated places of 2,500 inhabitants or more. At the Census of 1910 only 46.3 per cent were living in urban territory. In 1920, 9.3 per cent of the total population lived in incorporated places of less than 2,500 and 38.8 per cent lived in purely country districts, whereas at the Census of 1910 the population living in incorporated places of less than 2,500 was 8.8 per cent, while in purely country districts the population formed 44.8 per cent. The population living in urban territory increased after 1910 by 12,192,826 and the portion living in rural territory by 1,518,016. The annual excess of births over deaths in the country was roughly estimated at 1 per cent. The table below shows the preliminary estimates of population by States for 1920, together with census figures of 1900 and 1910.

The large falling off in the rate of growth for the country as a whole, as shown by these figures, is due mainly to an almost complete cessation of immigration for more than five years preceding the taking of the census in January last, and in some degree also to an epidemic of influenza, and to the casualties resulting from the world war. The population in the respective outlying possessions of the United States is shown in table on next page.

POPULATION OF THE UNITED STATES, BY STATES: 1920, 1910, AND 1900

STATE	Population			Increase * 1910-1920		Decrease * 1900-1910	
	1920	1910	1900	Number	P. Ct.	Number	P. Ct.

* A minus sign (—) denotes decrease.

POPULATION OF THE UNITED STATES AND OUTLYING POSSESSIONS: 1920 AND 1910

Area	Population	
United States with outlying possessions	117,857,509	101,146,530
Continental United States	105,708,771	91,972,266
Outlying possessions	12,148,738	9,174,264
Alaska	54,899	64,856
American Samoa	8,056	* 7,251
Guam	13,275	11,806
Hawaii	255,912	191,909
Panama Canal Zone	22,858	* 62,810
Porto Rico	1,299,809	1,118,012
Military and naval, etc., service abroad	117,238	55,608
Philippine Islands	† 10,350,640	‡ 7,635,426
Virgin Islands of the United States	§ 26,051	¶ 27,086

* Population in 1912.

† Population in 1918.

‡ Population in 1903.

§ Population in 1917.

¶ Population in 1911.

The average density of population throughout the United States, exclusive of outlying possessions, in 1920 was 35.5 persons per square mile of land area, as against 30.9 in 1910, 25 in 1900, and 21.2 in 1890. The density in the individual States in 1920 ranged from seven-tenths of one per square mile in Nevada to 566.4 in Rhode Island. It exceeded 200 per square mile in five States, namely, Rhode Island, with 566.4; Massachusetts, 479.2; New Jersey, 420; Connecticut, 286.4; and New York, 217.9. In five other States the density was greater than 100 but less than 200; in 27 States it ranged between 10 and 100; and in 11 States it was less than 10. The last-mentioned 11 States all lie west of the Mississippi River, and eight of them are in the Rocky Mountain division.

AGRICULTURE. The detailed discussion under the title **AGRICULTURE** covers the general statistics for agricultural production in the United States and its dependencies; and the articles on the individual States and territories contain paragraphs on **AGRICULTURE**, which give the acreage, production and value of the more important crops in 1920. Special articles are carried on the various crops such as **WHEAT**, **RYE**, **BARLEY**, **CORN**, **HAY**, **POTATOES**, etc. See also, in connection with Agriculture in the United States, the following articles: **AGRICULTURAL EDUCATION**; **AGRICULTURAL EXPERIMENT STATIONS**; **AGRICULTURAL EXTENSION WORK**; **AGRICULTURAL LEGISLATION**; **DAIRYING and FERTILIZERS**; **FOOD AND NUTRITION**; **HORTICULTURE**; **LIVE-STOCK**; **SOILS**; **AGRICULTURE, UNITED STATES DEPARTMENT OF**. See also the article **FORESTRY**.

MANUFACTURES. All the leading manufacturing industries in the United States are treated under separate titles, such as **AUTOMOBILES**; **BOOTS AND SHOES**; **IRON AND STEEL**; **PAPER**; **RUBBER**; **SHIPBUILDING**; **TEXTILE INDUSTRY**, etc. For engineering works, etc., see articles: **AQUEDUCTS**; **BRIDGES**; **CANALS**; **DOCKS and HARBORS**, **SHIPBUILDING**, etc.

MINERAL PRODUCTION. For information concerning the mineral production in 1919 and 1920, see the article, **MINERAL PRODUCTION**. The State articles also contain paragraphs on *Mineral Production*, where there were any mining activities of note. Separate articles appear on the more important minerals mined in the United States. In this connection, see such articles as: **COPPER**; **GOLD**; **IRON AND STEEL**; **LEAD**; **PLATINUM**; and **SILVER**.

EDUCATION. For information relating to ed-

ucation, see the articles on **EDUCATION IN THE UNITED STATES** and **UNIVERSITIES AND COLLEGES**. Under separate headings will be found statistical articles dealing with the most important colleges of the United States, such as: **HARVARD**; **YALE**; **PRINCETON**, etc.

RELIGION. Statistics and other material relating to the various denominations in the United States will be found under such headings as: **PRESBYTERIAN CHURCHES**; **PROTESTANT EPISCOPAL CHURCH**; **ROMAN CATHOLIC CHURCH**; **UNITARIANS**, etc.

OUTLYING POSSESSIONS. For outlying possessions of the United States see the articles, **ALASKA**; **GUAM**; **HAWAII**; **PHILIPPINES**; **PORTO RICO**; and for other countries with which the United States government has been in close administrative relation, see **DOMINICAN REPUBLIC**; **HAITI**; **CUBA**.

FOREIGN COMMERCE. The largest exports, as well as imports in any calendar year were shown by the government figures published at the close of the year and given below in detail. Exports in 1920 were \$8,228,000,000 against \$7,920,000,000 in 1919, an increase of 4 per cent in the year and three and one-third times the exports in the calendar year 1913. Exports in December, 1920, amounted to \$720,000,000 against \$677,000,000 in November, 1920, and \$681,000,000 in December, 1919. Imports in 1920 amounted to \$5,279,000,000 against \$3,904,000,000 in 1919, an increase of 35 per cent over 1919 and nearly three times the imports in the calendar year 1913, the last year before the war. Imports amounted to \$266,000,000 in December, 1920, compared with \$321,000,000 in November and \$381,000,000 in December, 1919. The excess of exports over imports amounted to \$454,000,000 in December and to \$2,949,000,000 in the calendar year 1920, compared with an excess of \$301,000,000 in December and \$4,016,000,000 in the calendar year 1919. The excess of exports averaged about \$3,000,000,000 in the calendar years 1916, 1917, 1918 and 1920, this amount having been exceeded by one billion dollars in the year 1919. Imports of gold amounted to \$429,000,000 in 1920 against \$77,000,000 in 1919, while exports of gold were \$322,000,000 in 1920 compared with \$368,000,000 in 1919. Silver imports in 1920 were \$88,000,000 compared with \$89,000,000 in 1919 and silver exports \$114,000,000 in 1920 against \$239,000,000 in 1919. Imports and exports by countries are shown on pages 686 to 687.

CONDITION OF THE TREASURY, JUNE 30, 1920. The public debt of the United States at the

close of the fiscal year 1920 is in detail as follows:

CONDITION OF THE TREASURY, JUNE 30, 1920

Interest-bearing debt:

Loan of 1925, 4 per cent.	\$118,489,900.00
Consols of 1930, 2 per cent.	599,724,050.00
Panama Canal loan, 2 per cent.	74,901,580.00
Panama Canal loan, 3 per cent.	50,000,000.00
Postal savings bonds, 2½ per cent.	11,539,860.00
Conversion bonds, 3 per cent.	28,894,500.00
Certificates of indebtedness	2,768,925,500.00
War savings certificates	827,419,021.38
First Liberty loan, 3½ per cent.	1,410,074,400.00
First Liberty loan converted, 4 per cent.	65,803,050.00
First Liberty loan converted, 4½ per cent.	478,089,200.00
First Liberty loan second converted, 4½ per cent.	3,492,150.00
Second Liberty loan, 4 per cent.	240,003,250.00
Second Liberty loan converted, 4½ per cent.	3,085,303,750.00
Third Liberty loan, 4½ per cent.	3,662,715,800.00
Fourth Liberty loan, 4½ per cent.	6,394,354,500.00
Victory Liberty loan, 3½ and 4½ per cent.	4,246,365,350.00
	\$24,061,095,361.38

Debt on which interest has ceased:

Funded loan of 1891	20,800.00
Loan of 1904	13,050.00
Funded loan of 1907	384,400.00
Loan of 1908-1918	519,860.00
Refunding certificates	10,410.00
Old debt	898,680.28
Certificates of indebtedness, matured	4,900,500.00
	\$6,747,700.26

Debt bearing no interest:

United States notes (greenbacks), less gold reserve	193,701,990.37
Bank notes, redemption account	29,478,280.00
Old demand notes	53,012.50
Fractional currency	6,842,067.04
	\$230,075,349.91

Total interest and non-interest-bearing debt, exclusive of certificates and notes offset by coin and bullion (gross debt)

\$24,297,918,411.53

RECEIPTS AND DISBURSEMENTS. The following table shows receipts and expenditures from April 5, 1917 to October 31, 1920.

DISBURSEMENTS	
Disbursements, exclusive of principal of public debt, April 6, 1917, to October 31, 1920	\$40,508,159,824.95
Public debt disbursements April 6, 1917, to October 31, 1920	43,888,827,878.10
Net balance in the general fund October 31, 1920	203,652,027.01
	<hr/> \$84,600,639,780.06

INCREASE OF DEBT IN WAR PERIOD. The following table shows disbursements and receipts and increase of debt in war period:

PUBLIC DEBT AND EXPENDITURES	
Total disbursements for war period, exclusive of principal of public debt	\$40,508,159,824.95
Total receipts for war period, exclusive of principal of public debt	17,838,953,165.01
	<hr/>
Excess of disbursements over receipts, for war period ..	\$22,669,206,659.94

ARMY AND NAVY. The Army and Navy are treated under various heads such as MILITARY PROGRESS; NAVAL PROGRESS; AERONAUTICS; SHIP-BUILDING; SHIPPING, etc. See also below under *Congress*, etc.

POST OFFICE. The revenues of the Postal Service for the fiscal year ending June 30, 1920, including the revenues from money-order and postal-savings business, amounted to \$437,150,212.33. During the preceding fiscal year the receipts were \$436,239,126.20, which, however, included collections of \$71,392,000 as a war tax derived from increased postage on first-class mail, the ordinary postal receipts for 1919 having been \$364,847,126.20. For comparative purposes, therefore, it may be said that the postal income for 1920 showed an increase of \$72,303,086.13 over the preceding year—war tax excluded—the rate of increase being 19.81 per cent. The audited expenditures for the year were \$454,322,609.21, an increase over the preceding year of \$91,824,973.52, or 25.33 per cent. The audited expenditures for the fiscal year were therefore

in excess of the revenues in the sum of \$17,172,396.88. After deducting losses of postal funds by fire, burglary, and other causes amounting to \$98,085.84, the total audited deficiency in postal revenues for the fiscal year is \$17,270,482.72. The expenditures included approximately \$33,202,600, additional, paid as a war bonus to postal employees in excess of the regular basic salaries, and \$35,698,400 authorized by special act of Congress in joint resolution no. 151, granting them an increased compensation for the year, and making a total increase in salaries of approximately \$68,901,000. This joint resolution was not recommended or approved by the Postmaster-General, who believed that it gave a blanket increase to thousands of employees who were already amply compensated.

There was a remarkable increase in the volume of business during the year, placed by the Postmaster-General at 10.81 per cent as compared with an average increase during the preceding 15 years of about 5.88 per cent.

RECEIPTS	
Net balance in the general fund April 5, 1917	\$92,317,710.27
Receipts, exclusive of principal of public debt, April 6, 1917, to October 31, 1920	17,838,953,165.01

Net debt increase for war period	\$22,669,206,659.94

through the extension of the service to additional commercial centres. There were three extensions of the service—one from New York to Cleveland—as discussed in the previous annual report. Through this extension the service was completed from New York to Chicago. Regular night flying with the mail was not practicable with the existing types of planes in the mountain section, but it was practicable in the level country of the Middle West, and the department was making preparations in the way of lighting regular and emergency landing fields and equipping planes with magnesium flares. It was promised that this service would be begun in the early spring between Chicago and Cheyenne, Wyo., and would result in delivering mail from New York to Cheyenne within 24 hours. The run from Cheyenne to San Francisco would then be a matter of 12 hours' flying. See AERONAUTICS, section on *United States Aerial Mail Service*.

The government-owned motor-vehicle service was gradually extended until on July 1, 1920, it was in operation in 163 cities. In 50 of

these six or more trucks were in use, while in the remainder of the cities less than six trucks were engaged in the transportation of mail. The service required 2806 trucks, ranging in size from three-eighths to five tons capacity. The number of supervisory officers, clerks, mechanics, chauffeurs, and garage men necessary in the operation and upkeep of these trucks totaled 3880. Government-owned service was being extended as rapidly as motor-truck equipment became available, and plans were made for the establishment of it at the close of the year in ten additional cities.

The Railway Mail Service was operated with increased efficiency under the space system. War conditions were overcome in the Foreign Mail Service which was brought back to normal. The Money Order Service and the Postal Savings System had rapidly recovered from war conditions and were in most satisfactory operation. The Rural Mail Service was extended during the fiscal year to more than 600,000 additional persons and the facilities of the service systematized and improved.

As to the Postal Savings Service the net amount remaining on deposit on June 30, 1920, was \$157,276,322, as compared with \$167,323,260 on deposit June 30, 1919. While this was net decrease in the amount on deposit, it is to be noted that during the year there was a greater amount deposited with the system than during any previous fiscal year. The decrease during the year was accounted for by the fact that the withdrawals from the service were much greater than during any other period, the majority of the patrons of the Postal Savings System being of foreign extraction, credited with about 75 per cent of the deposits, and being required to make remittances of larger sums of money than was formerly their custom to relatives and friends in Europe.

The Postmaster-General emphatically renewed his objections to the organization of government employees and his recommendation that organizations of postal employees be prohibited by law from affiliation with outside organizations.

PENSIONS. The amount paid out in pensions during the fiscal year ending June 30, was \$213,295,314, as compared with \$222,159,292 the year before. To pensioners in foreign countries \$1,280,581 was paid as compared with \$1,188,188 the year before. The following table shows the various classes on the pension roll, June 30, 1920:

Civil War—	
Soldiers	243,520
Widows	290,100
War with Spain—	
Soldiers	23,144
Widows	7,288
Indian wars—	
Survivors	3,745
Widows	2,483

Widows	299,863
Dependents	4,422
Minors	2,273

Helpless children	913
Nurses	109
Total of all classes	592,190

Deaths of Civil War pensioners:

Soldiers	27,871
Widows, minor children, etc.....	20,874

A Civil War pension bill was signed by the President on May 1 raising the pension of veterans to \$50 per month and providing for total disability, \$72; for the loss of limbs, \$60 to \$90; for widows, \$30; for each child, \$6. There was an increase also to veterans of the Spanish-American war and of the Philippine insurrections. This act was approved June 5. The Sterling-Lehlback law providing old-age pensions for Federal civil service employees was approved by the President, May 22. See OLD-AGE PENSIONS.

PATENTS. The total number of applications for patents for inventions during the fiscal year ending 1920 was 81,948, as compared with 62,755 in 1919. Other applications during the fiscal year 1920 were as follows:

Patents for designs	4,110
Reissues of patents	322
Registration of trade-marks	14,710
Registration of labels	1,280
Registration of prints	570

The patents expired during the fiscal year numbered 29,329. The gains over the previous fiscal year in applications for mechanical patents, registration of trade-marks, and in total applications were, respectively, 19,193, 6149, and 27,283 in numbers and 30, 72, and 36 per cent in proportionate increases. The gain in actual numbers far exceeded any previous increase of business in any one fiscal year, and this gain was larger than the total receipts of any calendar year in the history of the Patent Office up to and including the year 1881. The gain in business in the number of printed copies of patents sold was 22 per cent; in deeds of assignment received for record, 34 per cent; and in words furnished of copies of records, 79 per cent. The receipts of money for copies of patents increased 84 per cent. It is to be noted that the increase of price of these copies from five cents to ten cents, required by the first deficiency appropriation act of November 4, 1919, was effective for a little more than half the year. The gain in receipts of money if increase of price had been effective the whole year would have amounted to 140 per cent. The total receipts of money increased 23.8 per cent, and the net deficit for the fiscal year 1919 of \$65,228.13 was turned into a net surplus of \$179,135.96, making a relative net increase of \$244,364.09 for the year.

BUREAU OF MINES. Among the activities of the respective divisions of the Bureau of Mines during the fiscal year 1920, as described in the Directors' report, the following may be noted:

The mining division of the bureau, in addition to its regular work of advising and assisting both the coal and metal mining industries toward better and safer practices, assisted in the codification and adoption of improved coal-mine laws for the State of Utah, and prepared and was putting into operation coal-mine regulations for coal leases on government lands. In addition, new coal-mine explosives were regularly tested and added to the permissible list of the bureau for use in gaseous or dusty mines; tests and

demonstrations of better methods of protection against the dangers from coal dust and methane (gas) underground were made in the experimental mine; and the geophone, an underground listening device developed during the war, was further perfected and adapted for use in mines. In metal mining, the outstanding feature was the investigations of harmful dusts and the need for better ventilation in many of the western metal mines. The results were helping toward adoption of modern ventilation methods at many western metal mines, and thus greatly promoting healthful working conditions for miners. In the fuel division, coöperative work with outside agencies enabled the division to make twofold use of the money appropriated for it, and the results were leading to the saving and the more efficient use of fuel, a saving that exceeds many times the money invested by the bureau. This division also concerned itself with mechanical and electrical machinery and apparatus in and around mines, and prepared model laws for the use of electricity underground. Further, the development of underground storage-battery locomotives justified the preparation by the bureau of a schedule of tests. In the division of mineral technology the production of mesothorium as a substitute for radium for certain commercial uses was accomplished, and researches on the use of special steels brought decided results that would promote greater use. The progress toward the production of helium on a commercial scale in coöperation with the War and the Navy Departments was marked. In its work of assisting development and conservation in the industry the bureau codified leasing and operating regulations for oil and gas lands in the public domain.

EMBASSIES AND LEGATIONS TO THE UNITED STATES:

Argentina—Tomas A. Le Breton, Ambassador extraordinary and minister plenipotentiary.

Belgium—Baron E. de Cartier de Marchienne, Ambassador extraordinary and minister plenipotentiary.

Bolivia—Alberto Cortedellas, Secretary of Legation and Chargé d'affaires ad interim.

Brazil—Augusto Cochrane de Alencar, Ambassador extraordinary and minister plenipotentiary.

Bulgaria—Stephen Panaretoff, Envoy extraordinary and minister plenipotentiary.

Chile—Don Beltran Mathieu, Ambassador extraordinary and minister plenipotentiary.

China—Vi Kyuin Wellington Koo, Envoy extraordinary and minister plenipotentiary.

Colombia—Dr. Carlos Adolfo Urueta, Envoy extraordinary and minister plenipotentiary.

Costa Rica—Absent.

Cuba—Dr. Carlos Manuel de Céspedes, Envoy extraordinary and minister plenipotentiary.

Czecho-Slovakia—Karel Halla, Counselor of legation and chargé d'affaires ad interim.

Denmark—Constantin Brun, Envoy extraordinary and minister plenipotentiary.

Dominican Republic—Manuel de J. Camacho, Consul-general of the Dominican Republic in New York City.

Ecuador—Don Rafael H. Elizalde, Envoy extraordinary and minister plenipotentiary.

Finland—Armas Herman Saastamoinen, Envoy extraordinary and minister plenipotentiary.

France—J. J. Jusserand, Ambassador extraordinary and plenipotentiary.

Great Britain—Sir Auckland Geddes, Ambassador extraordinary and plenipotentiary.

Greece—Georges Roussos, Envoy extraordinary and minister plenipotentiary.

Guatemala—Don Joaquín Méndez, Envoy extraordinary and minister plenipotentiary.

Haiti—Charles Moravia, Envoy extraordinary and minister plenipotentiary.

Honduras—Don J. Antonio López Gutierrez, Envoy extraordinary and minister plenipotentiary.

Italy—Baron Camillo Romano Avezzana, Ambassador extraordinary and plenipotentiary.

Japan—Baron K. Shidehara, Appointed Ambassador extraordinary and plenipotentiary.

Mexico—Dr. Salvador Diego-Fernandez, Minister plenipotentiary and chargé d'affaires ad interim.

Montenegro—General Antoine Gvosdenovitch, Envoy extraordinary and minister plenipotentiary (absent).

Netherlands—J. T. Cremer, Envoy extraordinary and minister plenipotentiary.

Nicaragua—Don Diego Manuel Chamorro, Envoy extraordinary and minister plenipotentiary.

Norway—H. H. Bryn, Envoy extraordinary and minister plenipotentiary.

Panama—Don J. E. Lefèvre, Secretary of legation and chargé d'affaires ad interim.

Paraguay—William Wallace White, Consul-general of Paraguay in New York City.

Persia—Mirza Abdul Ali Khan, Sadigh-es-Saltaneh, Envoy extraordinary and minister plenipotentiary.

Peru—Don Federico Alfonso Pezet, Ambassador extraordinary and plenipotentiary.

Poland—Prince Casimir Lubomirski, Envoy extraordinary and minister plenipotentiary.

Portugal—Viscount d'Alte, Envoy extraordinary and minister plenipotentiary.

Rumania—N. H. Lahovary, Secretary of legation and Chargé d'affaires ad interim.

Russia—Boris Bakhmetieff, Ambassador extraordinary and plenipotentiary.

Salvador—Don Salvador Sol, Envoy extraordinary and minister plenipotentiary.

Serbs, Croats and Slovenes—Dr. Slavko Y. Grouitch, Envoy extraordinary and minister plenipotentiary.

Siam—Phya Prabha Karavongse, Envoy extraordinary and minister plenipotentiary.

Spain—Don Juan Riaño y Gayangos, Ambassador extraordinary and plenipotentiary.

Sweden—J. de Lagerberg, secretary of legation.

Switzerland—Marc Peter, Envoy extraordinary and minister plenipotentiary.

Uruguay—Jacobo Varela, Envoy extraordinary and minister plenipotentiary.

Venezuela—Don Santos A. Dominici, Envoy extraordinary and minister plenipotentiary.

EMBASSIES AND LEGATIONS OF THE UNITED STATES:

Argentina—Frederic Jessup Stimson, Ambassador extraordinary and plenipotentiary.

Belgium—Brand Whitlock, Ambassador extraordinary and minister plenipotentiary.

Bolivia—S. Abbot Maginnis, Envoy extraordinary and minister plenipotentiary.

Brazil—Edwin V. Morgan, Ambassador extraordinary and minister plenipotentiary.

Bulgaria— ————, Envoy extraordinary and minister plenipotentiary.

Chile—Joseph H. Shea, Ambassador extraordinary and plenipotentiary.

China—Charles R. Crane, Envoy extraordinary and minister plenipotentiary.

Colombia—Hoffman Philip, Envoy extraordinary and minister plenipotentiary.

Costa Rica— ——— Envoy extraordinary and minister plenipotentiary.

Cuba—Boaz W. Long, Envoy extraordinary and minister plenipotentiary.

Czecho-Slovakia—Richard Crane, Envoy extraordinary and minister plenipotentiary.

Denmark—Joseph C. Grew, Envoy extraordinary and minister plenipotentiary.

Dominican Republic—William W. Russell, Envoy extraordinary and minister plenipotentiary.

Ecuador—Charles S. Hartman, Envoy extraordinary and minister plenipotentiary.

Egypt—Carroll Sprigg, Agent and consul-general.

Finland— ——— Envoy extraordinary and minister plenipotentiary.

France—Hugh Campbell Wallace, Ambassador extraordinary and minister plenipotentiary.

Great Britain—John W. Davis, Ambassador extraordinary and minister plenipotentiary.

Greece and Montenegro—Edward Capps, Envoy extraordinary and minister plenipotentiary.

Guatemala—Benton McMillin, Envoy extraordinary and minister plenipotentiary.

Haiti—Arthur Bailly-Blanchard, Envoy extraordinary and minister plenipotentiary.

Honduras— ——— Envoy extraordinary and minister plenipotentiary.

Italy—Robert Underwood Johnson, Ambassador extraordinary and minister plenipotentiary.

Japan—Roland S. Morris, Ambassador extraordinary and minister plenipotentiary.

Liberia—Joseph L. Johnson, minister resident and consul-general.

Mexico— ———, Ambassador extraordinary and minister plenipotentiary.

Montenegro—Edward Capps, Envoy extraordinary and minister plenipotentiary.

Morocco—Maxwell Blake, Agent and consul-general.

The Netherlands—William Phillips, Envoy extraordinary and minister plenipotentiary.

Nicaragua—Benjamin L. Jefferson, Envoy extraordinary and minister plenipotentiary.

Norway—Albert G. Schmedeman, Envoy extraordinary and minister plenipotentiary.

Panama—William J. Price, Envoy extraordinary and minister plenipotentiary.

Paraguay—Daniel F. Mooney, Envoy extraordinary and minister plenipotentiary.

Persia—John L. Caldwell, Envoy extraordinary and minister plenipotentiary.

Peru—William E. Gonzales, Envoy extraordinary and minister plenipotentiary.

Poland—Hugh S. Gibson, Envoy extraordinary and minister plenipotentiary.

Portugal—Thomas H. Birch, Envoy extraordinary and minister plenipotentiary.

Rumania—Charles J. Vopicka, Envoy extraordinary and minister plenipotentiary.

Salvador—Peter Augustus Jay, Envoy extraordinary and minister plenipotentiary.

Serbs, Croats, and Slovenes—H. Percival Dodge, Envoy extraordinary and minister plenipotentiary.

Siam—George W. P. Hunt, Envoy extraordinary and minister plenipotentiary.

Spain—Joseph F. Willard, Ambassador extraordinary and minister plenipotentiary.

Sweden—Ira Nelson Morris, Envoy extraordinary and minister plenipotentiary.

Switzerland—Hampson Gary, Envoy extraordinary and minister plenipotentiary.

Uruguay—Robert Emmet Jeffery, Envoy extraordinary and minister plenipotentiary.

Venezuela—Preston McGoodwin, Envoy extraordinary and minister plenipotentiary.

HOUSE RECORD: *Second Session*. The 66th Congress met on Dec. 1st, 1919, in its first regular session. The important proceedings down to the close of the year are given in the preceding volume of this YEAR BOOK.

The House met for the first time in 1920, on January 6, after the holiday period, and its chief proceedings with their dates were as follows:

January 10. The question of seating Victor Berger, Socialist Congressman-elect from Wisconsin, came up for a second time and was decided in the negative by a vote of 328 to 6.

January 15. The Post Office appropriation bill for \$460,000,000 was passed after the provision for the air mail service had been eliminated.

January 19. Considerable reduction in the Rivers and Harbors appropriation bill, amounting to about \$30,500,000 was effected January 23. The enlisted men's pay increase bill was passed by 311 to 10. It was to operate from Jan. 1, 1920 to July 1, 1921, and the pay was raised one-third. The measure was then referred to the Senate.

January 21. The diplomatic appropriation bill was reduced by \$3,085,125.

January 31. A bill authorizing \$50,000,000 for food relief in Europe was unanimously reported by the Ways and Means Committee.

February 9. The Democrats at their caucus took a definite stand on the question of military training after a letter had been read from the President recommending a moderate attitude and no action on the part of the party. It adopted by a vote of 106 to 17 a resolution favoring that no measure should be passed by this Congress providing for universal compulsory service or training.

February 10. The conference report on the oil land leasing bill was adopted.

February 18. The legislative and executive and judicial appropriation bill carrying \$104,120,000 was reported by the appropriations committee.

February 20. The military affairs committee voted by 11 to 9 in favor of postponing universal military training legislation.

February 21. The conference report on the Cummins-Esch railroad bill was carried by 250 to 150 over the protests of labor men and farmers.

February 25. A motion to repeal the Volstead prohibition enforcement law was defeated by 80 to 39.

March 4. A resolution to investigate the fixing of sugar prices was carried by 162 to 142. Another motion to repeal the Volstead act was defeated.

March 18. The army reorganization bill providing for 299,000 men and 17,800 officers was passed by 246 to 92.

March 21. The resolution declaring the state of war with Germany at an end was proposed by Mr. Porter (Republican) chairman of Committee of foreign affairs.

March 23. The naval appropriation bill carrying \$425,000,000 was passed. This provided the sum of \$104,000,000 for completing the 1916 construction programme and authorized for the navy an enlisted personnel of 125,000 sailors and 20,000 marines.

April 2. The Ways and Means Committee voted by 15 to 6 to report the soldier bonus

legislation and declared against a bond issue and in favor of a tax on sales for raising the necessary \$1,500,000,000.

April 9. The peace resolution repealing the special wartime measures and declaring the war at an end was passed by 242 to 150.

April 16. The Post Office appropriation bill carrying \$462,500,000 was passed. This included the sum of \$1,250,000 for establishing air mail routes.

April 20. The deficiency railway appropriation bill was passed carrying \$319,000,000, thus making the total railway appropriations to that date \$1,780,000,000.

April 30. Sterling-Lehlback Act providing old-age pensions for Federal civil service employees carried.

May 14. The appropriation bill which the President had vetoed on the ground that it encroached on the President's authority was reintroduced but failed to secure the necessary majority. Both Houses adopted the conference report on the service men's increased pay bill (see below, *Senate Record*).

May 27. The House passed a bill authorizing the Treasury to make a final settlement of the \$1,000,000,000 of back taxes.

May 31. The bill was passed permitting the union of farmers for the sale of produce, but limiting profits to eight per cent; vote, 233 to 58.

June 5. The session ended.

Third (Short) Session. The house reassembled on December 6.

December 13. By unanimous vote war legislation, including the Lever Act but excluding Trading with the Enemy, War Finance Corporation and Liberty Loan Acts, were repealed. The Johnson immigration bill which practically excluded aliens for a year was passed by a vote of 293 to 41.

December 18. The joint resolution revising the War Finance Corporation was passed by a vote of 212 to 61.

December 22. The Emergency Tariff bill chiefly designed for the aid of farmers passed by vote of 196 to 36 in which party lines were ignored.

December 23. The annual pension bill carrying the appropriation of \$265,500,000 was passed.

SENATE RECORD. *Second Session.*

January 15. The Water Power Development bill, similar to the one adopted by the House in July was passed by the Senate.

January 17. Beginning of Sims naval controversy (see below). Rear-Admiral Sims criticized Secretary Daniels' award of naval honors in hearing before the Senate naval sub-committee.

January 21. A resolution was adopted to the effect that all Thracian territory surrendered by Turkey and Bulgaria should be awarded to Greece and that an outlet for Bulgaria should be afforded on the Aegean Sea.

January 22. Documentary evidence was received by the Senate committee investigating Mexican relations indicating that border raids in 1915 had been instigated and directed by President Carranza and his aides.

January 26. By a vote of 36 to 14 the Americanization bill was passed carrying \$6,500,000, to stimulate the teaching of English and to give aliens the basis of Americanism. The Senate Military Committee approved the bill requiring military training between the ages of 18 and 21, and provided for an army of citizen soldiers,

a national guard, and 300,000 regulars. Senator Lodge notified the Democratic conferees that in a compromise on the treaty his reservations on Article X and the Monroe Doctrine must remain untouched.

February 3. The Army, Navy and Marine Corps and Coast Guard Increased Pay bill, carrying \$59,500,000 and granting 10 per cent increase to officers and 20 per cent to men, was passed.

February 5. Senator Gronna's bill to repeal war-time control over wheat prices was unanimously reported by the agricultural committee.

February 9. The Senate sustained by a vote of 63 to 9 Mr. Lodge's proposal to bring the treaty again before the Senate, and the treaty was then recommitted to the Foreign Relations Committee with instructions to report it with the Lodge reservations.

February 11. The amendment offered to the reservations of the peace treaty by by-partisan conferees were accepted by Senator Lodge. The President's chief supporter Mr. Hitchcock, Democrat, of Nebraska, refused to accept the reservations.

February 12. The conference report on the Oil Land Leasing bill was accepted.

February 13. Mr. Hitchcock offered alternative compromise reservations on Article X of the Covenant but these proposals were afterward rejected.

February 23. By a vote of 47 to 17, the conference report on the Railroad Reorganization bill was accepted.

February 26. The Lodge Mandate reservations to the Peace Treaty was adopted by 68 to 4.

March 3. The Lodge reservations relating to domestic questions and to the Monroe Doctrine were adopted.

March 4. By a vote of 48 to 21 the amended Lodge reservation on Shantung and by a vote of 55 to 14 the Walsh reservation on American representation were adopted.

March 5. By a vote of 41 to 22 the Lodge reservation on the reparations commission was adopted.

March 7. A letter from President Wilson declaring that the proposed reservations are "nullifications" was made public by Mr. Hitchcock.

March 9. The Lenroot reservation in regard to the equality of voting power on the part of the United States in the League of Nations was adopted.

March 12. A new compromise reservation on Article X was offered by Mr. Lodge.

March 15. The Lodge reservation on Article X was carried, all Republican members voting for it with one exception and 16 Democrats,—the final vote standing 56 to 26.

March 17. The Lenroot foreign policy reservation permitting freedom of action in future European disturbances was defeated by a vote of 25 to 39.

March 18. The reservation favoring self-termination for Ireland introduced by Senator Gerry, Democrat of Rhode Island, was adopted.

March 19. Ratification of the Treaty failed for the second time of the requisite two-thirds majority, the vote standing 49 to 35.

March 20. Sterling-Lehlback Act passed providing old-age pensions for Federal civil service employees.

March 22. The appointment of Bainbridge Colby as Secretary of State and that of Charles R. Crane as Minister to China were confirmed.

March 24. The Foreign Relations sub-committee recommended the equipment of an Armenian army by the United States; the sending of a warship and marines to Batum, and the taking of steps toward the recognition of the new republic.

March 26. Mr. Borah, Republican of Idaho, introduced a bill to limit to \$10,000 in any one State the campaign expenditures of a presidential candidate.

April 3. The bill permitting the control of discounts by the Federal Reserve Board through its twelve reserve banks was carried.

April 6. A project for an extensive navy base at San Francisco was approved.

April 9. Immediate investigation of the railroad strike was unanimously ordered. An investigation of the 1918 Newberry-Ford campaign in Michigan was ordered by the committee on privileges and elections. The voluntary military training plan was substituted for the compulsory plan by a vote of 49 to 9.

April 12. The plan for educational and vocational training was rejected, but provision was made for voluntary universal training between the ages of 18 and 21 instead of 18 and 28.

April 14. A report was made on Russian propaganda in the United States by the Foreign Relations Committee.

April 20. The Army Reorganization bill was passed by a vote of 46 to 10 and was sent to conference. This measure among other features provided for the reform of courts martial, and the change of the status of the National Guard to that of a part of the unified army, the size of the latter being reduced to 280,000 men and 17,043 officers; also for voluntary military training between the ages of 18 and 23.

April 26. The Rivers and Harbors bill, carrying \$24,000,000, which was double the amount appropriated by the House, was passed.

April 27. Immediate action to relieve the sugar shortage and for the prosecution of profiteers was demanded. The Democratic minority elected unanimously Oscar W. Underwood of Alabama as leader.

April 28. The Naval Appropriations bill was passed including \$4,000,000 increase for building and an increase of the aviation appropriation from \$15,876,000 to \$25,000,000. Plans were made for developing California Naval Oil land reservations. The joint peace resolution of Mr. Knox to restore peace conditions by repealing the declaration of war against Germany and Austria was reported out of committee.

May 10. The resolution for the removal of the New York State canal from government operation and control was passed.

May 14. The Senate and House jointly adopted the conference report on the service-men's increased pay bill and the measure went to the President.

May 15. By a vote of 43 to 38 the Knox peace resolution was adopted and sent to the House as a substitute for the peace resolution adopted by the House on April 29. Three Democrats voted with the Republicans.

May 25. The annual pension bill was passed carrying an appropriation of \$279,000,000. The investigation of presidential campaign funds began.

June 5. The Soldier's Bonus bill failed of passage. The President failed to sign the measures repealing his extraordinary powers. The

second session of the 66th Congress ended.

Third (Short) Session. The Senate met on December 6, the opening of the short session of the 66th Congress.

December 7. The President's message, which was not delivered in person, was read. It covered the following main points: (1) Revision of the taxation laws; (2) the grant of independence to the Philippine Islands; (3) the grant of a loan to Armenia; (4) the need of economy in government expenditures; (5) the rehabilitation and training of disabled soldiers and sailors.

December 14. A resolution was passed reviving the War Finance Corporation and providing for the use of Federal Reserve facilities by farmers to aid in financing their crops.

December 16. The Poindexter anti-strike bill, which made it a felony to attempt to induce the employees of common carriers to quit work, was passed.

December 18. The measure providing for co-operation for the safeguarding of maternity between Federal and State authorities was passed, carrying an annual expenditure of \$1,480,000.

MEMBERSHIP OF 66th CONGRESS.

[Republicans in roman; Democrats in *italics*; Prohibitionists in SMALL CAPS; Republican and Progressive in roman with *; Independent in CAPS; Independent Republicans in *italic* CAPS.]

ALABAMA.—SENATORS: *Oscar W. Underwood, J. Thomas Heflin*. REPRESENTATIVES (Democrats, 9): Vacancy, 1: John McDuffie, S. Hubert Dent, jr., Henry B. Steagall, Fred L. Blackmon, William B. Oliver, Lilius B. Rainey, Edward B. Almon, George Huddleston, William B. Bankhead.

ARIZONA.—SENATORS: Henry F. Ashhurst, Marcus A. Smith. REPRESENTATIVE (Democrat, 1): At large, Carl Hayden.

ARKANSAS.—SENATORS: Joseph T. Robinson, William F. Kirby. REPRESENTATIVES (Democrats, 7): T. H. Caraway, William A. Oldfield, John N. Tillman, Otis Wingo, H. M. Jacaway, Samuel M. Taylor, William S. Goodwin.

CALIFORNIA.—SENATORS: James D. Phalen, Hiram W. Johnson. REPRESENTATIVES (Republicans, 6; Democrats, 4; Prohibitionist, 1): Clarence F. Lea, John E. Raker, Charles F. Curry, Julius Kahn, John I. Nolan, John A. Elston, Henry E. Barbour, Hugh S. Herman, Charles H. Randall, Henry Z. Osborne, William Kettner.

COLORADO.—SENATORS: Charles S. Thomas, Lawrence C. Phipps. REPRESENTATIVES (Republicans, 3; Democrat, 1): William N. Vaile, Charles B. Timberlake, Guy U. Hardy, Edward T. Taylor.

CONNECTICUT.—SENATORS: Frank B. Brandegee, George P. McLean. REPRESENTATIVES (Republicans, 4; Democrat, 1): Augustine Lonergan, Richard P. Freeman, John Q. Tilson, Schuyler Merritt, James P. Glynn.

DELAWARE.—SENATORS: Josiah O. Wolcott, L. Heisler Ball. REPRESENTATIVE (Republican, 1): At large, Caleb R. Layton.

FLORIDA.—SENATORS: Duncan U. Fletcher, Park Trammell. REPRESENTATIVES (Democrats, 4): Herbert J. Drane, Frank Clark, John H. Smithwick, William J. Sears.

GEORGIA.—SENATORS: Hoke Smith, William J. Harris. REPRESENTATIVES (Democrats, 12): James W. Overstreet, Frank Park, Charles R. Crisp, William C. Wright, William D. Upshaw, James W. Wise, Gordon Lee, Charles H. Brand, Thomas M. Bell, Carl Vinson, William C. Lankford, William W. Larsen.

IDAHO.—SENATORS: William E. Borah, John F. Nugent. REPRESENTATIVES (Republicans, 2): Burton L. French, Addison T. Smith.

ILLINOIS.—SENATORS: Lawrence Y. Sherman, Medill McCormick. REPRESENTATIVES (Republicans, 22; Democrats, 5): At large, William E. Mason, Richard Yates, Martin B. Madden, James R. Mann, William W. Wilson, John W. Rainey, Adolph J. Sabath, James McAndrews, Nickl Juul, Thomas Gallagher, Fred A. Britton, Carl R. Chindblom, Ira C. Copely, Charles E. Fuller, John C. McKenzie, William J. Graham, Edward J. King, Clifford Ireland, Frank L. Smith, Joseph G. Cannon, William B. McKinley, Henry T. Rainey, Loren E. Wheeler, William A. Rodenberg, Edwin B. Brooks, Thomas S. Williams, Edward E. Denton.

INDIANA.—SENATORS: James E. Watson, Harry S.

New. REPRESENTATIVES (Republicans, 18): Oscar B. Lühring, Oscar E. Bland, James W. Dunbar, John S. Benham, Everett Sanders, Richard N. Elliott, Merrill Moores, Albert H. Vestal, Fred S. Purnell, William R. Wood, Milton Kraus, Louis W. Fairfield, Andrew J. Hickey.

IOWA.—SENATORS: Albert B. Cummins, William S. Kenyon. REPRESENTATIVES (Republicans, 11): Charles A. Kennedy, Harry E. Hull, Burton E. Sweet, Gilbert N. Haugen, James W. Good, C. William Ramseyer, Cassius C. Dowell, Horace M. Towner, William R. Green, L. J. Dickinson, William D. Boies.

Kansas.—SENATORS: Charles Curtis, Arthur Capper. REPRESENTATIVES (Republicans, 7; Democrats, 1): Daniel R. Anthony, Jr., Edward C. Little, Philip P. Campbell, Homer Hoch, James G. Strong, Hays B. White, J. N. Tinscher, William A. Ayres.

KENTUCKY.—SENATORS: J. C. W. Beckham, A. Owsley Stanley. REPRESENTATIVES (Republicans, 4; Democrats, 7): Allen W. Barkley, David H. Kincheloe, Robert Y. Thomas, Jr., Ben Johnson, Charles F. Ogden, Arthur B. Rouse, James C. Cantrill, King Swope, William J. Fields, John W. Langely, John M. Robison.

LOUISIANA.—SENATORS: Joseph E. Ransdell, Edward J. Gay. REPRESENTATIVES (Democrats, 8): James O'Connor, H. Garland Dupré, Whitnell P. Martin, John T. Watkins, Riley J. Wilson, Jared Y. Sanders, Ladislav Lazaro, James B. Ansell.

MAINE.—SENATORS: Bert M. Fernald, Frederick Hale. REPRESENTATIVES (Republicans, 4): Louis B. Goodall, Wallace H. White Jr., John A. Peters, Ira G. Hersey.

MARYLAND.—SENATORS: John Walter Smith, Joseph I. France. REPRESENTATIVES (Republicans, 3; Democrats, 3): William N. Andrews, Carville D. Benson, Charles P. Coady, J. Charles Linthicum, Sydney E. Mudd, Frederick N. Zihlman.

MASSACHUSETTS.—SENATORS: Henry Cabot Lodge, David I. Walsh. REPRESENTATIVES (Republicans, 12; Democrats, 4): Allen T. Treadway, Frederick H. Gillett, Calvin D. Paige, Samuel E. Winslow, John Jacob Rogers, Willford W. Lufkin, Michael F. Phelan, Frederick W. Daling, Alvan T. Fuller, Peter F. Tarrue, George Holden Tinkham, James A. Galtivan, Robert Luce, Richard Olney, William S. Greene, Joseph Walsh.

MICHIGAN.—SENATORS: Charles E. Townsend, Truman H. Newberry. REPRESENTATIVES (Republicans, 12; Democrat, 1): Frank E. Doremus, Earl C. Michener, J. M. C. Smith, Edward L. Hamilton, Carl E. Manes, Patrick H. Kelley, Louis C. Cramton, Joseph W. Fordney, James C. McLaughlin, Gilbert A. Currie, Frank D. Scott, W. Frank James, Clarence J. McLeod.

MINNESOTA.—SENATORS: Knute Nelson, Frank B. Kellogg. REPRESENTATIVES (Republicans, 8; Independent, 1; Independent Republican, 1): Sydnev Anderson, Franklin F. Ellsworth, Charles R. Davis, OSCAR E. KELLER, Walter H. Newton, Harold Knutson, Andrew J. Volstead, WILLIAM L. CARSS, Halvor Steenerson, Thomas D. Schall.

MISSISSIPPI.—SENATORS: John Sharp Williams, Pat Harrison. REPRESENTATIVES (Democrats, 8): Ezekiel S. Candler, Hubert D. Stephens, Benjamin G. Humphreys, Thomas U. Stason, William W. Venable, Paul B. Johnson, Percy E. Quin, James W. Collier.

MISSOURI.—SENATORS: James A. Reed, Selden P. Spencer. REPRESENTATIVES (Republicans, 5; Democrats, 11): Milton A. Romjue, William W. Rucker, Jacob L. Muligan, Charles F. Booher, William T. Bland, Clement C. Dickinson, Samuel C. Major, William L. Nelson, Champ Clark, Cleveland A. Newton, William L. Igoe, Leonidas C. Dyer, Marion E. Rhodes, Edw. D. Hays, Isaac V. McPherson, Thomas L. Rubey.

MONTANA.—SENATORS: Henry L. Myrra, Thomas J. Walsh. REPRESENTATIVES (Republican, 1; Democrat, 1): John M. Evans, Carl W. Riddick.

NEBRASKA.—SENATORS: Gilbert M. Hitchcock, George W. Norris. REPRESENTATIVES (Republicans, 6): C. Frank Reavis, Albert W. Jefferis, Robert E. Evans, Melvin O. McLaughlin, William E. Andrews, Moses P. Kinkaid.

NEVADA.—SENATORS: Key Pittman, Charles B. Henderson. REPRESENTATIVE (Democrat, 1): At large, Charles R. Evans.

NEW HAMPSHIRE.—SENATORS: George H. Moses, Henry W. Keyes. REPRESENTATIVES (Republicans, 2): Sherman F. Burroughs, Edward H. Watson.

NEW JERSEY.—SENATORS: Joseph S. Frelinghuysen, Walter E. Edge. REPRESENTATIVES (Republicans, 7; Democrats, 5): Francis F. Patterson, Jr., Isaac Bacharach, Thomas J. Scully, Elijah C. Hutchinson, Ernest R. Ackerman, John R. Ramsey, Amos H. Radcliffe, Cornelius A. McGinnon, Daniel F. Minahan, Frederick R. Lehlbach, John J. Egan, James A. Hamill.

NEW MEXICO.—SENATORS: Albert B. Fall, Andrew A. Jones. REPRESENTATIVE (Republican, 1): At large, Benigno C. Hernandez.

NEW YORK.—SENATORS: James W. Wadsworth, Jr., William M. Calder. REPRESENTATIVES (Republican,

24; Democrats, 19): Frederick C. Hicks, Chas. Pope Caldwell, John MacCrate, Thomas H. Cullen, John B. Johnston, Frederick W. Rowe, James P. Maher, William E. Cleary, David J. O'Connell, Lester D. Volk, Daniel J. Riordan, Henry M. Goldfogle, Christopher D. Sullivan, Nathan D. Perlman, Peter J. Dooling, Thomas F. Smith, Herbert C. Pell, Jr., John F. Carver, Joseph Rowan, Isaac Siegel, Jerome F. Donoran, Anthony J. Griffin, Richard F. McKiniry, James V. Ganly, James W. Husted, Hamilton Fish, Jr., Charles B. Ward, Rollin B. Sanford, James S. Parker, Frank Crowther, Bertrand H. Snell, Luther W. Mott, Homer P. Snyder, William H. Hill, Walter W. Magee, Norman J. Gould, Alanson B. Houghton, Thomas B. Dunn, Archie D. Sanders, S. Wallace Dempsey, Clarence MacGregor, James M. Mead, Daniel A. Reed.

NORTH CAROLINA.—SENATORS: Furnifold M. Simmons, Lee S. Overman. REPRESENTATIVES (Democrats, 10): John H. Small, Claude Kitchen, Samuel M. Brinson, Edward W. Pou, Charles M. Stridman, Hannibal L. Godwin, Leonidas D. Robinson, Robert L. Doughton, Clyde R. Hoy, Zebulon Weaver.

NORTH DAKOTA.—SENATORS: Porter J. McCumber, Asle J. Gronna. REPRESENTATIVES (Republicans, 3): John M. Baer, George M. Young, James H. Sinclair.

OHIO.—SENATORS: Atlee Pomerene, Warren G. Harding. REPRESENTATIVES (Republicans, 14; Democrats, 8): Nicholas Longworth, A. E. B. Stephens, Warren Gard, Benjamin F. Welts, Charles J. Thompson, Charles C. Kearns, Simon D. Fess, R. Clint Cole, Isaac K. Sherwood, Israel M. Foster, Edwin D. Ricketta, Clement Brumbaugh, James T. Begg, Martin L. Davey, C. Ellis Moore, Roscoe C. McCulloch, William A. Ashbrook, Frank Murphy, John G. Cooper, Charles A. Mooney, John J. Babka, Henry I. Emerson.

OKLAHOMA.—SENATORS: Thomas P. Gore, Robert L. Owen. REPRESENTATIVES (Republicans, 2; Democrats, 6): Everette B. Howard, William W. Hastings, Charles D. Carter, Tom D. McKown, John W. Harrell, Scott Ferris, James V. McClintic, Charles Swindall.

OREGON.—SENATORS: George E. Chamberlain, Charles L. McNary. REPRESENTATIVES (Republicans, 3): Willis C. Hawley, Nicholas J. Sinnott, Clifton N. McArthur.

PENNSYLVANIA.—SENATORS: Boies Penrose, Philander C. Knox. REPRESENTATIVES (Republicans, 27; Democrats, 7; Independent Republican, 1; Vacancy, 1): At large, William J. Burke, Thomas S. Crago, Anderson H. Walters, William S. Vare, George S. Graham, Harry C. Ransley, George W. Edmunds, Peter F. Costello, George P. Darrow, Thomas S. Butler, Henry W. Watson, W. W. Grist, Patrick McLane, John J. Casey, John Reber, Arthur G. Dewalt, Louis T. McFadden, Edgar R. Kiess, John V. Leisher, Benjamin A. Focht, Aaron S. Kreider, John M. Rose, Edward S. Brooks, Egan J. Jones, John H. Wilson, Samuel A. Kendall, Henry W. Temple, Milton W. Shreve, Henry J. Steele, Nathan L. Strong, Willis J. Hulines, Stephen G. Porter, M. CLYDE KELLY, John M. Morin, Guy E. Campbell.

RHODE ISLAND.—SENATORS: LeBaron B. Colt, Peter G. Gerry. REPRESENTATIVES (Republicans, 3): Clark Burdick, Walter R. Stines, Ambrose Kennedy.

SOUTH CAROLINA.—SENATORS: Ellison D. Smith, Nathaniel B. Dial. REPRESENTATIVES (Democrats, 7): Richard S. Whalen, James F. Burnes, Fred H. Dominick, Samuel J. Nicholls, William F. Stevenson, Philip H. Stoll, Edward O. Mann.

SOUTH DAKOTA.—SENATORS: Thomas Sterling, Edwin S. Johnson. REPRESENTATIVES (Republicans, 2; Democrat, 1): Charles A. Christopherson, Royal C. Johnson, Harry L. Gandy.

TENNESSEE.—SENATORS: John K. Shields, Kenneth McKellar. REPRESENTATIVES (Republicans, 2; Democrats, 8): Sam R. Sells, J. Will Taylor, John A. Moon, Cordell Hull, Ervin L. Davis, Joseph W. Byrne, Lemuel P. Padgett, Thetus W. Sims, Finis J. Garrett, Hubert F. Fisher.

TEXAS.—SENATORS: Charles A. Culberson, Morris Sheppard. REPRESENTATIVES (Democrats, 18): Eugene Black, John C. Box, James Young, Sam Rainsbury, Halton W. Sumners, Rufus Hardy, Clay Stone Briggs, Joe H. Eagle, Joseph J. Mansfield, James P. Buchanan, Tom Connally, Fritz G. Latham, Lucian W. Parrish, Carlos Bee, John N. Garner, C. B. Hudspeth, Thomas L. Blanton, Marvin Jones.

UTAH.—SENATORS: Reed Smoot, William H. King. REPRESENTATIVES (Democrats, 2): Milton H. Wellins, James H. Mays.

VERMONT.—SENATORS: William P. Dillingham, Carroll S. Page. REPRESENTATIVES (Republicans, 2): Frank L. Greene, Porter H. Dale.

VIRGINIA.—SENATORS: Claude A. Swanson, Carter Glass. REPRESENTATIVES (Republican, 1; Democrats, 9): Schuyler Otis Bland, Edward E. Holland, Andrew J. Montague, Patrick H. Drewry, Rorer A. James, James P. Woods, Thomas W. Harrison, R. Walton Moore, C. Bascom Slemp, Henry D. Flood.

WASHINGTON.—SENATORS: Wesley L. Jones, Miles Poindexter. REPRESENTATIVES (Republicans, 5): John F. Miller, Lindley H. Hadley, Albert Johnson, John W. Sumners, J. Stanley Webster.

WEST VIRGINIA.—SENATORS: Howard Sutherland, Davis Elkins. REPRESENTATIVES (Republicans, 5; Democrat, 1): M. M. Neely, George M. Bowers, Stuart F. Reed, Harry C. Woodyard, Wells Goodykoontz, Leonard S. Echols.

WISCONSIN.—SENATORS: Robert M. La Follette, Irvine L. Lenroot. REPRESENTATIVES (Republicans, 10; Vacancy, 1): Clifford E. Randall, Edward Voigt, James G. Monahan, John C. Kleczka, Florian Lampert, John J. Esch, Edward E. Browne, David G. Classon, James A. Frear, Adolphus P. Nelson.

WYOMING.—SENATORS: Francis E. Warren, John B. Kendrick. REPRESENTATIVE (Republican, 1): At large, Frank W. Mondell.

ALASKA.—George B. Grigsby.

HAWAII.—J. Kuhio Kalaniana'ole.

PHILIPPINES.—Jaime C. De Veyra, Isauro Gabaldon.

PORTO RICO.—Felix Cordova Davila.

CABINET CHANGES. Upon the election of Carter Glass as Senator from Virginia, David Franklin Houston succeeded as Secretary of the Treasury and Edwin James Meredith (q.v.) became Secretary of Agriculture in place of Mr. Houston.

On February 13, Robert Lansing, Secretary of State retired as a result of a lack of harmony between his views and those of the President. During the earlier months of the President's long illness several Cabinet meetings were called under Mr. Lansing's nominal direction. Addressing Mr. Lansing, the President several times criticized him for the calling of these meetings, blaming him in a manner that practically called for his withdrawal. Finally the President in a letter (February 11) asked Mr. Lansing to retire and give the President an opportunity to select some one whose mind "would more willingly go along with" the President's. The difference between them appeared to have been of long standing, and to have developed during the Peace Conference. In general it appeared to arise from opposing theories as to the duties of the office. In the large and difficult field of foreign relations Mr. Lansing evidently believed that it was his duty not to act merely as the agent of the President, but to suggest and develop policies on his own initiative; whereas it seemed to be the President's view that the Secretary of State should merely execute the President's policy.

On February 25, Bainbridge Colby, a lawyer of New York was nominated by the President to succeed Mr. Lansing. The nomination was opposed by a considerable element in the Senate but eventually accepted. The main objections to Mr. Colby had to do with his changes in political allegiance. He was independent in tendency from the beginning of his career and in 1912 he had left the main body of his party to support Mr. Roosevelt. In 1916, although Mr. Roosevelt endorsed the candidacy of Charles E. Hughes on the Republican ticket Mr. Colby left the party altogether and came out for Mr. Wilson. From that time he firmly supported the Wilson policies. He was appointed a member of the Shipping Board during the war and in that capacity opposed control by British interests of the for-

mer international mercantile marine which had been transferred to American registry. He was afterwards in Paris at the sessions of the Peace Conference and he was from the first a strong advocate of the League of Nations. See COLBY, BAINBRIDGE.

An important change took place in the Department of the Interior with the resignation of the Secretary Franklin K. Lane whose ability had been rated very high throughout the country. In his letter to the President, February 28, his last day of office, he criticized sharply government methods as he had observed them during his seven years as member of the cabinet. The work of the various departments, he said, was badly organized; every one was afraid of every one else; responsibility was evaded and the creative sense blunted. He advised as a partial remedy the selection of fewer men at the head and men of greater capacity.

On April 24, it was announced that Walker D. Hines, Director-General of Railroads, had resigned, his resignation to go into effect May 15. He had served in the Railroad Administration from the time of its creation in December, 1917, when the government assumed control, and he became Director-General, upon the retirement of Secretary McAdoo, Jan. 11, 1919.

ARMY. On March 25 the House of Representatives requested information of the Executive in regard to the United States troops on the Rhine. To this the President replied, April 1, saying that these troops were under his own direction and not under that of Field Marshal Foch; that most of them were at Coblenz; and that they numbered, March 28, 726 officers and 16,756 enlisted men, serving in Germany, not only under the terms of the original armistice, but under the later agreements which had prolonged the armistice.

The subject of army camps, much discussed in 1919, continued to be prominent during the year. On April 12, two conflicting reports in regard to the construction of the 32 army camps and cantonments as a result of the investigation were submitted to the House by the War Expenditures Committee. The majority report which had Republican backing criticised the government officials in charge of the war building programme while the minority report of the Democrats defended the administration. According to the critics of the administration the government lost \$78,531,521 on the sixteen National Army cantonments as a result of waste, inefficiency and graft. The minority report declared that the construction work was equivalent to building 32 cities with a population of 37,000 to 46,000, but nevertheless it was completed in three months. They characterized it as one of the great achievements of the war. It was learned that the sale of American army stocks in France had realized on January 4 about \$800,000,000 and the total value was estimated at \$1,700,000,000.

The subject of army organization was under discussion during the year and the bill to that end was approved June 4. The Army Reorganization bill was agreed upon by the House and Senate May 27. For description in detail see the article MILITARY PROGRESS. On June 7, Major-General John J. Pershing, requested the Secretary of War to be placed on the retired list subject to military duty in case of emergency.

In November it was learned that the army was still 70,000 short of its authorized strength,

the figures according to the War Department statement being as follows: Total, 213,067; Continental United States, 162,918; army of occupation on the Rhine, 14,306; Philippines, 18,947; Hawaii, 6927; Panama, 5600; Porto Rico, 1493; China, 1406; Alaska, 867. There were a few troops in France and England. The strength of the National Guard on November 1 was 67,552 as compared with its authorized strength, 182,830.

Among the measures taken on behalf of ex-service men, had been the establishment of a Federal board for vocational education. In answer to certain criticisms to the effect that the board had worked inefficiently, the House committee on education investigated its operation. It recommended that the board should be made a bureau under the Treasury department, or a bureau under the department of the Interior. It had been charged against the board that although after nineteen months of operation, it had registered over 200,000 cases, it had placed only 2400 men in training and had succeeded in training and in placing in employment only 217.

Soldiers' Bonus. The House on May 29th by a vote of 289 to 92 passed the bill to provide bonuses for ex-soldiers. In order to do this they suspended the rules and passed it after a debate of forty minutes. In the majority there were 112 Democratic votes and in the minority 40 Republican votes. The bill involved an expenditure of over \$1,600,000,000. At the close of the second session of Congress it failed of passage.

SIMS-DANIELS CONTROVERSY. As noted under *Congress* above, a controversy began January 17 as result of the criticism by Admiral Sims of Secretary Daniels' award of naval honors which widened into a criticism of the conduct of the navy during the war. Admiral Sims maintained that the inefficiency of the Navy Department at Washington prolonged the war so that his recommendations as the commander of the fleet had not been followed, and that the morale of the navy had been destroyed by flagrant injustices of conferring decorations, etc. Emphatic denials on the part of the Secretary of the Navy supported by other officials succeeded and the controversy was the subject of prolonged press comment.

LAW EXCLUDING ALIEN AGITATORS. Although certain elements in the Republican party disapproved of further legislative action against sedition and although a sub-committee of the Republican National Committee with former Senator Albert J. Beveridge as chairman reported in May against enacting further laws against sedition, the administration continued in its repressive policy. The House bill amending the law dealing with alien agitators was modified by the Senate Immigration Committee in the direction of wider government powers for deportation and exclusion. This bill which passed on June 5 and was signed by the President on the same day embodied the Sterling and Johnson proposals. It provided for the exclusion from the United States or deportation of alien anarchists and all who "advise, advocate, or teach, or who are members of organizations that advise, advocate or teach: (1) the overthrow by force or violence of the Government of the United States or of all forms of law, or (2) the duty, necessity or propriety of the unlawful assaulting or killing of any officer . . . of the Government of the United States . . . , or (3) the un-

lawful damage, injury or destruction of property, or (4) sabotage"; or those who write or circulate or who are members of or affiliated with organizations that write or circulate any written or printed matter advocating any of these things. Representative Johnson, Chairman of the House Immigration Committee and sponsor of the bill in the House declared the meaning of the act to be that these foreign revolutionists should not preach their doctrines or circulate their literature or contribute their money to these objects and that the measure was aimed specifically at aliens in such revolutionary organizations as the I. W. W., the Communist, and Communist Labor parties.

DEPORTATION OF AGITATORS. On January 2 there were simultaneous raids by agents of the Department of Justice on the alleged Radicals in thirty cities resulting in the arrest of some 2700 persons of whom about three-fourths were Russians. Steps were taken toward deporting convicted Radicals more rapidly despite the complaints of many prominent men on the ground that the policy of the administration in this respect was contrary to American traditions. On January 12, the attorney of the eastern district of Pennsylvania resigned, at the same time publishing a statement condemning the methods of the Attorney-General. In his reply the latter cited the official manifesto of the Communist party as proof of its designs to overthrow the government by force and of its alliance with the Moscow International. It will be remembered that at the end of December 1919, a vessel named the *Buford* and nicknamed in the newspapers the "Soviet Ark" sailed from New York to Finland carrying 249 so-called Reds; also that several thousand arrests on the ground of revolutionary activities had been made in the course of the year 1919. The department was criticized for the deportation or detention of many prisoners on insufficient evidence. To this the Attorney-General replied that after careful investigation he had failed to discover any instance where justice had not been done to an alien and he said that a hearing had been given in every case and that the accused had had every opportunity to justify himself. On January 21, Mr. W. B. Lloyd, a wealthy radical and 37 others were indicted in Chicago on the ground of anarchistic conspiracy. On the list of those accused was the name of Mr. John Reed (q.v.), well-known newspaper writer, but he had escaped to Copenhagen on his way to Finland. On January 23, the grand jury of the Crime Court of Illinois indicted 85 leaders of the Communist party, including Mrs. Rose Pastor Stokes who had already been sentenced, June 1, 1919, under the Espionage act, but the verdict against her had been reversed on the ground that the presiding judge had been biased and had unduly influenced the jury. Her arrest in 1920 followed her testimony on behalf of a fellow Communist, Mr. Benjamin Getlow, who had been tried in New York on a similar charge and whose case attracted much attention. He was a clothing cutter by trade and the manager of a radical paper called the *Revolutionary Age*. He had been an active member of the Socialist party and on that ticket was elected some years before to the New York Assembly. He was charged with associating openly in 1918 and 1919 with a group of anarchists who spread the view that the United States government had treated its workmen with injustice and that there

was no hope of bettering their condition by constitutional means. He was arrested as the result of the work of the Lusk committee; convicted of conspiring to publish in his magazine the manifesto of the Communist party, the general charge being that of criminal anarchy, and received the maximum sentence of imprisonment, February 11. Many other sentences were imposed on radicals in other parts of the country. In Cincinnati, for example, thirteen Socialists were sentenced to terms ranging from three to fifteen months on the charge of conspiring to defeat the military draft; seven of the Industrial Workers of the World were sentenced for murder in the second degree in Washington on March 13.

Nevertheless, the activities of the authorities in suppressing alleged revolutionary movements slackened somewhat in the spring. This was due in part to the decision of the Secretary of Labor, Mr. Wilson, that membership in the Communist Labor party was not a deportable offense, and to the course taken by Mr. Louis F. Post, Assistant Secretary, in cancelling deportation orders and reducing the amount of bail from \$10,000 to \$1,000. Secretary Wilson's decision was given out May 5, in time to prevent new raids throughout the country on the Communist Labor party. The decision was attacked by Mr. F. P. Garvin, Assistant Attorney-General, who said that radicals, however dangerous, would now be able to join the Communist Labor group without renouncing any of their principles. It was defended by Secretary Wilson on the ground that though the Communist Labor party advocated a revolution it called for the use of parliamentary methods. While the administration was condemned in labor and progressive circles for going too far in this matter, it was condemned in the opposite camp for not going far enough. In March, Senator King of Utah offered a resolution for the investigation of the administration and the enforcement of the immigration laws and for inquiring specifically into the administration of Mr. Frederic C. Howe, former Immigration Commissioner of New York. Mr. King presented a list of 80 aliens whose deportation had been justified, but who had been retained by the Labor Department. Finally a general inquiry into the deportation policy of the administration was favored with special reference to the course taken by the Assistant-Secretary Post, who had released certain aliens whose deportation had been ordered. On April 15, a resolution was offered in the House for investigation of the charges against Mr. Post and his impeachment was demanded. Hearings on the subject began on April 27. It was charged that many hundreds of aliens taken under the law had been released and that this had been done in many cases without investigation and over the head of the Commissioner of Immigration. On the other hand, it was said that Mr. Post had merely exercised humanity while the "justice officers used worse than Russian methods." The chairman, Mr. Johnson, testified that Mr. Post's action had greatly hampered the work of the Department of Justice and had brought about a state of confusion which would benefit only the Red agitators. Attacks were made on Mr. Post and Secretary Wilson, at a meeting of the Senate Immigration Committee May 6. Mr. Post on his own behalf testified May 7-8 to the effect that the evidence presented against him was insufficient. At the same time he offered statistics

indicating that aside from the aliens deported on the *Buford*, only 22 had been deported since November 1, 1919; that from November 1, 1919, to April 24, 1920, about 6350 warrants had been issued and that about 5000 persons had been arrested of whom 3000 had been released almost immediately; that he had cancelled deportation orders for 61 Russian workers and 1322 members of the Communist and Communist Labor parties; that deportation warrants had been issued for 307 Russian workers and 455 Communists of whom about 263 had been deported, while the deportation of others had been delayed because the ports of destination were inaccessible. He said that of all the prisoners arrested by the Department of Justice he had found that only 40 or 50 actually favored violence against the United States, and he declared that his reduction of bail to \$1000 was in accordance with the constitutional prohibition of excessive bail and was sufficient to assure the appearance of the accused. Attorney-General Palmer replied on June 1 to Mr. Post's criticism of the Department. He said that the latter had exceeded his power; that he practically encouraged Red activities; that believing the deportation law to be wrong he had deliberately disregarded it, releasing dangerous radicals. Mr. Palmer named a number of cities in which the departmental raids had revealed preparations to make use of bombs and guns. He denounced as a falsehood the charge that the Department of Justice had agents in its service for the purpose of forming Communist organizations which could be raided.

May Day passed without disturbance despite the expectation on the part of the Department of Justice of an anarchist outbreak. The Attorney-General declared that a far-reaching plot had been formed but had failed on account of the energetic measures taken by the Federal authorities and that he had seized tons of inflammatory writings urging May Day outbreaks for the purpose of forcing peace with Soviet Russia or as a protest against the arrest of radicals, or in pursuit of the class war; and he said a black list had been found on which many prominent officials had been marked for death. He also declared that hundreds of suspects had been arrested, that every public building had been guarded by Federal agents and police and the homes of threatened officials adequately protected.

Attacks on the administrative policy of repression, especially on the course of Attorney-General Palmer, continued throughout the year from a variety of sources. The National Popular Government League, May 27, denounced the illegal practices of the United States Department of Justice. It was signed by twelve prominent jurists including deans and professors of Harvard, Chicago, and many other university law faculties. Many affidavits were produced in proof of acts of cruelty and theft on the part of agents and the treatment of radicals was denounced as brutal in many specified instances. For example, in the hotel and coal strikes in Hartford, Buffalo, Detroit and New York City and in the raid on the Russian People's House in New York City in November 1919, it declared that American institutions had not been protected by this course but on the contrary had been seriously undermined and it concluded that no organization or radicals acting through propaganda during preceding six months could have created so much revolutionary sentiment as had been created by

the Department of Justice itself. The opponents of the Department of Justice warmly commended the course of Assistant-Secretary Post. They furthermore charged the Department of Justice with inciting criminal agitation by agents who joined various suspected associations, and with wholesale arrests, imprisonment without warrant, illegal search, criminal thefts of money and personal property by agents of the Department, cruel and unusual punishments, use of government funds contrary to law for propaganda in the press, brutal and indecent treatment of women prisoners, etc. The American Women's Committee, May 31, charged the agents of the Department with cruelty and decided to appeal to Washington for an investigation. On the other hand the Department of Justice was defended by a large part of the press, and in other quarters there was complete indifference to the whole subject. Moreover the Attorney-General responsible for the policy of the Department had a large popular following as presidential candidate and both he and his supporters argued that all measures that had been taken were thoroughly in the spirit of American patriotism and were absolutely necessary for the safety of the state.

RETURN OF THE RAILROADS. In accordance with the President's proclamation, the government control of railroads which had been enforced after Dec. 28, 1917, came to an end and the railroads were returned to their owners, March 1, 1920. Meanwhile, the Esch-Cummins law had been signed by the President, February 28, and the operations of the railroads under private control were begun in accordance with its provisions. The majority of the employees were retained. In many instances the officials who had operated the roads before the war returned to the management. For further information in respect to the Esch-Cummins law, the cost under government operation, and the various features of railway operation during the year, see the article **RAILWAYS**. The great railway strike of 1919 and its consequences down to the close of that year are described in the preceding **YEAR BOOK**. Early in 1920 the railway brotherhoods again demanded wage increases and in March a bi-partisan board discussed the points at issue, but came to an end in April without reaching an agreement, and the question was now submitted to the Labor Board which was organized under the Esch-Cummins bill. A railway strike began on the Chicago and Milwaukee Railway, April 2. The brotherhood declared it an illegal strike having no relation to the wage question and aiming only to promote the "One Big Union" idea.

FUEL CONTROL. The functions of the Fuel Administrator were divided by executive order, February 28, between the Director-General of Railroads and a commission of four. Government control of the prices of bituminous coal was terminated April 1.

INDUSTRIAL CONFERENCE. As noted in the preceding **YEAR BOOK**, after the Industrial Conference came to an end, a second Industrial Conference was called by the President and assembled December 1. Its final report was issued March 6, 1920. See the article, **LABOR ARBITRATION**.

COAL STRIKE COMMISSIONS. The Coal Strike Commission appointed December 22, 1919, to arrange the difficulties between operators and miners, reported, March 11, in favor of a general wage increase of 27 per cent without change in

conditions. At a joint conference of miners and operators, March 29, it was agreed that the Commission's decision should go into effect April 1. Meanwhile, the Wage Scale Committee comprising representatives of the anthracite parties to the dispute had been constituted and in June this committee proposed the appointment by the President of a commission similar to that for bituminous coal. This was done, and the new commission after investigating the question reported in August in favor of a 17 per cent advance in wages. The question of wage increases beyond this point was under discussion in December.

TARIFF EMERGENCY BILL. On December 22, an emergency bill proposed by Mr. Fordney for the purpose of aiding the farming interests by a high protective tariff on agricultural imports was passed in the House by a vote of 196 to 86, forty-one Democrats being in favor of the bill and fourteen Republicans against it. It gave the highest protection to wool, proposing duties ranging from 15 cents a pound on unwashed to 45 cents a pound on washed wool. Other duties proposed were: Cattle, 30 per cent; sheep, \$2 a head; peanuts, 3 cents a pound; beans, 2 cents a pound; rice, 2 cents a pound; vegetable oils, 20 to 26 cents a gallon; wheat, 30 cents a bushel; corn, 15 cents a bushel. It was before the Senate Finance Committee at the close of the year.

IMMIGRATION BILL. The Johnson Immigration Bill for the virtual exclusion of aliens was passed by the House by vote of 293 to 41, December 13, with amendments reducing the period of exclusion to one year instead of two, and allowing brothers and sisters of aliens residing in the United States to enter the country. The bill was then sent to the Senate. The chief arguments advanced on its behalf in the course of the debate were that at the existing rate of immigration 800,000 would enter the country in a year; that the unemployed already numbered 2,000,000 with a prospect of increase; that the housing situation would be rendered more acute by this influx of aliens; that the immigrants belonged to classes that would remain in cities and aggravate the problems of congestion; that many of them were tainted with radical views; that there was danger of their introducing typhus and other epidemic diseases. The facts and figures on which these arguments rested were attacked by the opponents of the measure who also objected to certain technical features of it. Much evidence was gathered at the close of the year indicating the prospect of a greater influx of aliens than ever before and many plans for restricting immigration were under discussion and favored in quarters opposed to the Johnson measure as too extreme.

THE CASE OF SENATOR NEWBERRY. The long proceedings in the case of Senator Truman H. Newberry, and others charged with conspiracy to violate the Federal law limiting campaign expenses resulted March 20 in a verdict of guilty. Appeal was taken to the United States Supreme Court and the case was pending at the close of the year. For details see **MICHIGAN**.

PHILIPPINE INDEPENDENCE. During 1920 the Philippine Commission of Independence with headquarters at Washington carried on a campaign for the self-government of the Islands. It sent an appeal to the Republican Convention at Chicago for the adoption of a plank declaring in favor of immediate independence, citing the

promise of the United States in the preamble of the Jones law of August 29, 1916, to recognize Philippine independence as soon as a stable government was established. This appeal complained that frequent attempts to secure the fulfillment of this promise had failed and that the Republican Convention had called no Filipino delegates. It said that the American government had entered into a binding engagement and that it was the duty of the great political parties to see that the promise was kept. In his message of December 7, President Wilson said on this subject:

"Allow me to call your attention to the fact that the people of the Philippine Islands have succeeded in maintaining a stable government since the last action of the Congress in their behalf, and have thus fulfilled the condition set by the Congress as precedent to a consideration of granting independence to the Islands. I respectfully submit that this condition precedent having been fulfilled, it is now our liberty and our duty to keep our promise to the people of those islands by granting them the independence which they so honorably covet."

RELATIONS WITH HAITI. For more than a year there were rumors of American misgovernment in Haiti, including charges of atrocities on the part of American troops. As a rule the general policy of the United States was not condemned, but it was said that individual acts of oppression were frequent owing to the bad choice of the American officials. A charge commonly made was that many appointments were simply the result of party considerations without regard to the merits of the appointees. Later, in the middle of 1920, magazine articles began to appear referring to instances of irregular warfare in Haiti and to the severity of Americans in putting down the so-called *cacos*, a class of bandits and revolutionists that hid in the mountains and made occasional forays. These were followed by articles specifically charging American troops with acts of brutality including a resort to the same kind of torture formerly said to have been employed in the Philippines, such as the "water cure." It was said that about 3000 natives had been killed during the occupation by the Americans; also that some of the revolts had been occasioned by the course of the Americans in enforcing the *corvée* or compulsory road service. The American government took notice of these charges in October, as the result of a letter addressed, Oct. 2, 1919, by Brigadier-General George Barnett, former major-general in command of the Marine Corps, to Colonel Russell who was then in command of the Marines in Haiti. This letter was not brought to the attention of the officials at Washington till the autumn of 1920. In it General Barnett had said that the court-martial of a private in the Marines for the killing of a native had brought out a statement by his counsel showing that practically indiscriminate killing of the natives had been going on for some time. He said that 3250 natives had been killed by American troops, but subsequently changed the figure to 2250. The Secretary of the Navy, Daniels, in a public address in October declared that he had not heard of these conditions and that they would be immediately investigated. A court of inquiry was convened toward the end of the month with Admiral Henry T. Mayo as presiding officer and on October 27, General Barnett was called as the first witness.

He said that the evidence on which he based

his letter was brought to his attention when he reviewed the records of the military trials of two privates of the Marines on the charge of unlawful execution of the natives. He explained that by indiscriminate killing he did not mean that the killings were to be laid at the door of the Marines as a whole, but only of individuals, and that he had no evidence other than what was afforded by those two military trials, but desired the commandant in Haiti to look into the conditions implied by the counsel of one of the prisoners. Major E. M. McClellan who aided General Barnett in preparing the report on Haiti was next called. He submitted a list of killings from the beginning of the American occupation in 1915 to June 30, 1920. The total was 2250 and the greater number was reported for 1919, namely 1861. Major McClellan declared that the figures were compiled from official reports at Marine headquarters. The large number killed in 1919 was explained by the campaign carried on in that year for the purpose of clearing the island of the bandits. Major Thomas C. Turner, Adjutant of the First Brigade of Marines, testified on November 12 before the National Committee of Inquiry that after the American occupation there had been 17,000 bandits in the field at various intervals and that of these 7608 had surrendered. In the course of nearly 300 engagements after the campaign against the bandits began in October 1919, 1132 Haitians were killed. He testified that the troops had never molested the inhabitants. In subsequent testimony on behalf of the Marines the cruelty and destructiveness of the bandits were emphasized. According to one witness, as many as two thousand peaceful Haitians had been killed by them within a few years and during the summer of 1919 large farming regions had been completely devastated. Moreover it was charged that the bandits mutilated the marines and the gendarmes whom they captured. Instances of shocking brutality were cited.

After the publication of the charges against the Marines, the State Department sent Rear-Admiral H. S. Napp on a special mission to Haiti to investigate conditions in the bandit district. He reported that throughout that region there had been a great improvement, that women traversed the country freely without protection and that everywhere the people expressed gratitude for their security from the attacks of the *cacos* or bandits. As to the Marines, the prevailing disposition seemed to be to regard them as friends, but there was much distrust of the gendarmes who being natives and largely from the lower class were inclined to robbery.

While the investigation of alleged brutalities on the part of the Marines was going on, President Dartiguenave of Haiti appealed November 13 for a Congressional investigation of the American civil administration. He said the civil administration was more oppressive than the military, and attacked the methods of the minister, Mr. Blanchard and the financial counsel, Mr. John McIlhenny. The latter he said did not report to the Haitian government but required that government to submit to his will. As an instance of the latter's arbitrary courses he said that aided by the American minister he had confiscated salaries of the president, secretary of the state, and the members of the legislative council, on account of the Haitian government's refusal to insert in the contract of

the National Bank of Haiti, which was controlled by the National City Bank of New York, a clause prohibiting the importation into Haiti of foreign gold. After many other allegations in respect to misgovernment and failure to keep to the spirit of the treaty, he said that all the efforts of his government to collaborate with the American authorities were disdained and repulsed, and that the State Department closed its ears to protests. As to the American Marines had no way of proving homicide or violence and while he had heard of various regrettable acts, he believed the accusations had been exaggerated by public clamor. In general the people had rejoiced over the coming of the Americans. According to reports in the press, the administration attached no importance to the criticism by the Haitian president and sustained the acts of the American minister.

There was much sympathy in certain quarters with the position of President Dartiguenave who though showing readiness to forget the past declared that there had been serious abuse of power. His demand that there should be a Congressional investigation was favorably received by many American newspapers. He said that for a long time a system of terrorism had been applied but that it had ceased when the command of the gendarmes passed over to General Wise and Colonel Hooker in July, 1919. Without distinction of party, many American writers for the press deplored conditions in Haiti and especially the policy of concealment which had prevented the facts from being known for so long. The application of the system of *corvées* had been an especial grievance. It was a relic of the old French law requiring service in kind, but according to critics of the American administration it had served as a means of organizing forced labor in a form that practically amounted to slavery. Another grievance was the appointment in Haiti of Americans from the southern States whose prejudice was likely to lead them into courses needlessly offensive to the people. It was said that they showed a marked lack of tact and sometimes brutality in dealing with the cultivated element in the colored population. The American officials also were said to have treated the local government without due respect. Instances were cited in the press as evidences that the American government had been disposed to treat the Haitians like disorderly children. The criticism of the government was not directed against its intentions or against the American policy. Nor was it said that the military occupation had not been resulting beneficially to the people. The criticism dealt mainly with the lack of wisdom shown in the choice of officials, the lack of tact, the long continued policy of concealment and the apparent desire to escape responsibility at any cost. It was only after many months that the government took notice of the charges against it. A year before the subject became matter for official action, misrule in Haiti had been definitely charged in various quarters.

THE TREATY IN CONGRESS. The President had opposed any reservations of the Treaty and was against all amendments by the Senate, despite the fact that many of his own party believed that the amendments had not destroyed the substance of the League of Nations plan. In his Jackson Day letter of January 8, he declared strongly against textual changes and intimated

that the Treaty should be submitted to the people in the approaching election as "a great and solemn referendum." In the same month Viscount Grey who had come to Washington as temporary Ambassador to succeed the Earl of Reading issued a letter which was published in the London *Times* January 31. In this he held that the reservations were not unreasonable from the American point of view and were in no way injurious to Great Britain or the other members of the League. He accepted the principle of the Lodge amendment in respect to the representation of British dominions in the League. This letter appeared to be in conformity with the opinions of the French and English governments. There was some comment in the American press to the effect that Lord Grey had interfered improperly in American affairs but this aspect of the matter was not much insisted upon. Political lines divided opinion inside Congress but not to the same extent outside. Bi-partisan conferences were held in January but on January 31 Senator Lodge declared that they had failed. On February 9, the Senate voted, 63 to 9, to suspend the rules and permit reconsideration. The Treaty was referred to the Senate Foreign Relations Committee which reported it, February 16, and from that time it was almost continuously debated till March 19, when it failed of passage. The vote lacked the necessary two thirds majority by seven, the final vote, being 57 for ratification and 37 against (including pairs). The vote for ratification including pairs was, according to political parties, 34 Republicans and 33 Democrats; against ratification, 24 Democrats and 15 Republicans. On March 8, in a letter addressed to Senator Hitchcock the President reaffirmed his opposition to any change in Article X (see preceding YEAR BOOK, p. 766) saying that any reservation which deprived the League of Nations of the force of that article cut out the very heart of the Covenant, and that the article in question represented the renunciation by the great Powers of their imperialistic policies and marked the acceptance of a new doctrine in the world's affairs; that all the imperialistic influences in Europe had been hostile to it and that its defeat now would mark the complete triumph of their efforts to nullify the Treaty. In this letter he made the following remark which was widely discussed and gave great offense to the controlling party in France and its supporters in other countries. "Throughout the sessions of the Conference in Paris it was evident that a militaristic party under the most influential leadership was seeking to gain ascendancy in the counsels of France. They were defeated then, but are in control now." Another remark of his was significant as showing the uncompromising attitude that he maintained: "I hear of reservationists and mild reservationists but I cannot understand the difference between a nullifier and a mild nullifier. . . . I have been struck by the fact that practically every so-called reservation was in effect a rather sweeping nullification of the terms of the treaty itself." In spite of the President's attitude, the Senate adopted, March 15, by a vote of 56 to 26, a reservation in respect to Article X in a form even stronger than had previously been accepted. and in this vote 14 Democrats voted with the Republicans. The reservation in its final form was as follows:

"The United States assumes no obligations to employ its military or naval forces or any form of economic discrimination to preserve the territorial integrity or political independence of any other country, or to interfere in controversies between nations, whether a member of the league or not, under the provisions of Article X; or to employ the military or naval forces of the United States under any article of the treaty for any purpose unless in any particular case the Congress in the exercise of full liberty of action shall by act or joint resolution so declare."

A fifteenth reservation adopted the day before the final vote (March 18) was much discussed. This related to Ireland and declared the adherence of the United States to the resolution of sympathy with the aspirations of the Irish people for a government of their own choice, adopted by the Senate June 6, 1919, adding that when such government is attained, "a consummation, which, it is hoped, is at hand, it should promptly be admitted as a member of the League of Nations." This reservation was passed by a vote of 38 to 36, with 21 Democrats and 17 Republicans voting in the affirmative.

The day after the adverse vote of March 19, the rejected Treaty was sent back to the President. There had been a small group of Senators of whom Senator Borah was the leader, who were known as irreconcilable in their opposition to the Treaty and the League. They were, for the most part, Republicans. But the majority of the Senate under Senator Lodge's leadership favored the Treaty if its acceptance were accompanied by a resolution making certain qualifications and by the reservations. It was believed that enough Democrats would vote with the Republicans on this issue to give it the necessary two-thirds majority. When the above-mentioned votes were taken it was charged in certain quarters that Senator Lodge and the Borah group had combined in order to make the reservations still more objectionable to the administration and it was charged by others even that the administration forces had united with the Borah group for the purpose of defeating the Treaty altogether, rather than accept it with amendments. Among persons of moderate opinions there was much criticism of the administration for not accepting the Treaty with the comparatively slight reservations that would have been possible at the beginning of the discussion. As the discussion went on, the opposition grew stronger and the reservations were finally more serious than they would have been at first.

THE WAR STATUS. After the Treaty was rejected in the Senate efforts were made in the House to end the war by joint resolution. A motion to this effect was brought forward by the chairman of the Foreign Affairs Committee and it was passed by the House on April 9, by a vote of 242 to 150, with 22 Democrats voting in the affirmative, while only two Republicans voted against it. It went to the Senate where it was referred to the Foreign Affairs Committee of which Senator Lodge was chairman. On April 30, the committee, by a strict party vote, reported favorably as a substitute for the House resolution, a resolution that had been drafted by Senator Knox.

THE KNOX RESOLUTION. The Knox resolution proposed the repeal of the joint resolution of April 6, 1917, which declared the existence of a state of war with Germany and in place of it to declare that the state of war was at an end provided that the United States should retain possession of the property of the German

government and its subjects which was then in its hands until such time as a treaty was ratified containing suitable provisions in regard to claims growing out of the war or until the German government had granted to the citizens of the United States the most-favored-nation treatment and confirmed to the United States the fines, seizures, etc., made at the expense of Germany during the war. It was further provided that Germany was to forego any pecuniary claim based on injuries which had occurred before the treaty came into effect and that the United States did not waive any of the rights or privileges acquired by it or by its situation under the Armistice or under the Treaty of Versailles.

The subject of the Knox resolution was widely discussed during 1920 and the measure was criticized severely as going too far against the defeated enemy and as likely to involve damage suits. It was argued that if it established peace without Germany's acceptance of the conditions, the United States or its citizens would be liable under international law to suits on the part of Germany for the private property seized during the war. It was also criticized for the attempt to secure to the United States the benefits of the Treaty which the Senate had refused to ratify. Senator Knox in arguing on its behalf charged that President Wilson had maintained a state of war in order to force the Senate to accept a Treaty which had been almost universally discredited. He said that the Treaty itself provided for the act which would terminate the war and that it was evidently the intention at that time that the war would end. The debate that followed turned mainly on the question whether the legal status was that of peace or war. The President sent a telegram to the chairman of the Democratic Central Committee at Portland, Oregon, which was published on May 9. In this, he called upon the legislatures to support the treaty and condemn the Lodge reservations. He said the League of Nations was the hope of the world and that if it were not ratified, the chief motive which had brought America into the war would be defeated. On May 13 the Knox resolution was amended by eliminating the request to the President that he should negotiate a separate treaty with Germany. In its amended form, the Senate voted it on May 15 by 43 to 38. Among the affirmative votes were those of three Democrats: Senators Reed, Shields and Walsh, and among the negative votes, there was one Republican, Senator Nelson, while another, Senator McCumber was paired. On May 19, it was reported to the House which on May 21, the House of Representatives adopted it by a vote of 228 to 139; 19 Democrats voting in the affirmative. On May 27, the President vetoed the measure with a message to Congress to the following effect: He was unwilling to become a party to an action that would stain the honor of the United States. The resolution seemed to establish peace with Germany without exacting from the German government anything by way of setting right the numberless wrongs which it had done. The resolution said nothing about reduction of armaments, vindications of the rights of Belgium, release of the Christian populations of the Ottoman Empire or other important elements of pacification. The United States declared in effect it did not care to take any further risks or to assume any further responsibilities with regard to the freedom of na-

tions or the sacredness of international obligations or the safety of independent peoples. On May 28, a motion to pass the resolution over the President's veto was lost by a vote of 219 against 152, 17 Democrats voting with the majority, and 2 Republicans voting with the minority. Thus the deadlock continued in the summer of 1920.

On June 3, the House by a vote of 343 to 3 passed a resolution repealing all the war measures except the Lever Food and Fuel Control act and the Trading with the Enemy act and on the following day the resolution passed the Senate, but the President failed to attach his signature to it so it did not go into effect.

THE TREATY AS A CAMPAIGN ISSUE. In May, the President declared that the Democrats as a party should endorse and support the Treaty and condemn the Lodge reservations. Meanwhile the opinions of prominent men in both parties had become very diverse and the lines between the two parties were indistinct. Democratic sentiment seemed to be drifting away from the President's position to a willingness to accept reservations and Republican sentiment on the other hand seemed to be veering toward the more hostile attitude in respect to the League of Nations of Senators Johnson, Borah, and others. Many prominent Republicans like former President Taft, Mr. Elihu Root, Mr. Charles E. Hughes, and Mr. George W. Wickersham, had been committed to the Treaty and the League of Nations and while they favored mild reservations, they were much closer to the Democratic attitude than they were to the attitude of Borah and Johnson. Mr. Hoover had entered the Republican primaries in California against Senator Johnson, but when he was accused of being too European in his attitude, he declared that he had supported the Treaty only on the basis of the Lodge reservations. Before the meeting of the Republican convention in Chicago, there was much uncertainty in regard to this issue. The views of leaders like Mr. Root, Mr. Taft, and Mr. Hughes, were fairly close to those of Senator Lodge and the Senate majority during the long debate. These views were also supported by General Wood, Governor Lowden, Mr. Hoover, and others. On the other hand were prominent Republicans like Senators Knox, Borah, Johnson, and Poindexter who were irreconcilable opponents of the League. See below *Political Campaign*.

THE CAMPAIGN. The Republican speakers for the most part occupied themselves in criticizing the Democratic administration, but they pointed also to the record of the Republican party for constructive service since the Civil War. It was not difficult to convince hearers of its superiority for it had been in power the greater part of the time. For the same reason it could point also to the larger number of political veterans who had distinguished themselves in the public service. A common argument for the Republicans during the campaign was based on the greater average ability of Republican officials, and politicians. There were signs early in the year that the old division of the Republican party into Conservative and Roosevelt or Progressive elements had disappeared although some members of the latter were supporting Senator Hiram Johnson. There was an irreconcilable difference, however, among the persons who were talked of as candidates in regard to the views on the League of Nations. Senator Hiram Johnson,

for example, was opposed to any League at all resembling that which the President stood for. Mr. Hoover, whose allegiance was uncertain as between the two great political parties, but who subsequently declared himself a Republican, was a strong supporter of the League.

Among the Democrats, the majority appeared to be somewhat mildly in favor of the Treaty and the League. It was believed by some that the President's course would have the effect of ranging the supporters of the League on the Democratic side and putting the Republicans in a position of destroyers of the Treaty and enemies of the League, but this situation was not brought about. The Democratic party as a whole was not in favor of the strict devotion to the existing document that had marked the President's attitude. There were many in the Democratic party who believed that the President was too uncompromising in respect to modifications of the Covenant. It seemed certain, for example, that the New York Democratic delegation which would be the largest at the San Francisco Convention was less in sympathy with the President's views than were most of the Republican delegates. The democracy of New York City, under Tammany's control was more hostile to Mr. Wilson's ideas in respect to the League of Nations than were the Republican followers of Mr. Knox. In New York among the Democrats, the hostility to the League assumed an anti-British tinge and many Democratic politicians were supporting the Sein Finn Irish movement in a manner that was distinctly hostile to the British government. Mr. Bryan declared for the Lodge reservations and against the White House position. In short, during the first half of the year at least it was plain that the League of Nations issue divided both parties, and as time went on its opponents seemed to increase. This was in part due to a growing distrust of the modern European governments and a considerable resentment against what was supposed to be a lack of appreciation in Europe of America's efforts in the war. Mr. Wilson was applauded in liberal quarters when he insisted upon American responsibility as a guiding principle but this was not a monopoly of the President's, Mr. Root also recognized in full measure American responsibility in world affairs but he approved the Treaty with Senator Lodge's reservations. Senator Lodge himself granted the main principle of international coöperation and the main elements provided for it in the Treaty. After the reservations were passed by the Senate, moreover, it had been made plain by the British, French and Italian governments that they did not believe these amendments affected vitally the Treaty or prevented the development of the League of Nations. In the early part of the year the general principles of the reservations had been accepted by General Wood, Governor Lowden and Mr. Hoover, and among the other candidates Senator Harding and President Butler had made it plain that they would not advocate a policy that would involve the foregoing by America of her international obligations. As the day for the Convention approached, the situation was altogether uncertain. While the majority of the leaders appeared to be in general agreement with the Lodge position, others like Senators Knox, Hiram Johnson, Borah and Poindexter were irreconcilable. The public mind was evidently not centred upon the

Peace Treaty and there was no chance that the election would take the form of the "solemn referendum" demanded by President Wilson in the Jackson Day letter, quoted above. Many other matters were more generally discussed. The question of the enforcement of prohibition, for example, constantly engaged the public attention though it did not become a party issue.

PRESIDENTIAL CANDIDATES. Several of the "booms" for Presidential candidates had been going on in 1919 and within the early months of 1920 they were well under way. The strongest was that of General Wood, and next perhaps was that of Mr. Herbert Hoover. From the time his name was brought up in 1919 he was considered as a Democratic possibility or as likely to rally a Progressive or independent vote but he gave out in the spring that he would run only as a Republican candidate. Other Republican candidates prominently discussed at the beginning of the year were Senator Hiram Johnson of California and Governor Frank O. Lowden of Illinois; and among those frequently mentioned were Governor Calvin Coolidge of Massachusetts; Governor Allen of Kansas; Senator Warren G. Harding of Ohio; and Dr. Nicholas Murray Butler of New York. During the first half of the year, indications pointed to the success of General Wood's candidacy. He was certainly the most conspicuous figure among those put forward and his campaign made rapid progress. Early in the year his supporters were counting on 300 delegates pledged to him at the Convention at the start; and from New York, New Jersey, Delaware, and New England alone, 100 delegates were claimed. Mr. Frank H. Hitchcock who had managed the Taft and Hughes campaigns gave his adherence to the Wood movement which, however, was directed by Colonel Wm. Proctor of Ohio, who became national chairman and active director. The arguments for General Wood included the following points: He had won a wide reputation as an administrator and organizer in Cuba and the Philippines after the Spanish-American War; his record during the late war had won him especially the support of service men and he had also a large following among all who were impatient of the slowness of which this country had prepared for war. It was he who developed the Plattsburg idea and the system of military training and other agencies which helped to prepare the country for war. The Plattsburg association was one of the first to take steps on his behalf and the movement spread throughout the training camps associations. At its beginning it was largely voluntary and it included many young men who offered their services as clerks, stenographers, etc. in the campaign. By the close of March, the Leonard Wood League which had become a national organization had active branches in thirty-five States. It undertook a comprehensive campaign and issued a vast number of books, pamphlets, etc. telling of the candidate's achievements. The leading argument on his behalf was that he was a strong man who would deal resolutely with the difficulties of reconstruction. His Americanism was much emphasized and his soundness in respect to all extreme ideas. By the middle of April he was generally regarded as the leading Republican candidate. At this time there arose a discussion over the expenditures of candidates which continued to the time of the Convention. Large amounts of money were spent on behalf

of General Wood, but this was defined as necessary in a campaign of publicity. His expenditures being apparently in great excess over those of his competitors gave his opponents chance to attack him. A striking feature of the early phase of the political campaign was Senator Johnson's speaking tour on the issue of the League of Nations. He had been from the first one of the "irreconcilables," opposing the Covenant as soon as it was read before the Senate, and he insisted that the subject should go to the people for decision. According to his arguments the particular League of Nations proposed by the Paris Peace Conference would bring about conditions directly opposite to those at which it aimed—in other words would result in countless wars and commit the United States to participation in them for an indefinite period. He was not opposed to another kind of League in which nations could assemble under codified international laws, and which would allow America complete liberty of action. The main point in Senator Johnson's candidacy aside from this irreconcilable attitude toward the League of Nations was his appeal on the basis of a progressive record to the more advanced element among Democrats and Republicans.

At the presidential preference primaries in most of the States the names of three of the candidates appeared on the ballots, namely, General Wood, Governor Lowden and Senator Johnson. Johnson had a large majority in North Dakota; a plurality in Michigan, a large majority in California, and took the lead in Nebraska and Montana. Lowden was far in the lead in Illinois. Wood had a plurality in South Dakota; won in New Jersey over Johnson by a small majority, and had a plurality in Indiana. Harding carried his own State, Ohio. Johnson in California received 370,905 as against 210,561 for Hoover. On the eve of the election press estimates gave 125 votes pledged to Wood, 112 to Johnson, 72 to Lowden and 39 to Harding.

As to the Democrats it was known that the President would not be a candidate although for some time there were some who believed that his objections might be overcome. There was also a faint hope on the part of a certain element that Mr. Bryan might be nominated. The first on the list in the early part of the year was undoubtedly Mr. McAdoo, the former Secretary of the Treasury. As the President's son-in-law he was objectionable to a certain element in the party that had opposed the President but his difference with the President on certain important respects tended to offset this objection and he further appealed to the Progressive and Independent voters. Other candidates discussed but not prominently were Governor Cox of Ohio; Mr. John W. Davis, Ambassador to England and Mr. Champ Clark. In April the leading candidates were Mr. McAdoo, Governor Edwards, and Attorney-General A. Mitchell Palmer; but in the course of the month Mr. McAdoo publicly declared that he would not permit his name to be voted on in the primaries. The persons talked of as Democratic candidates were not especially active and Attorney-General Palmer was the only one who made a general speaking tour. One of the features of Governor Edwards' campaign was the use made of his strong opposition to the Prohibition amendment and on this account he was vigorously opposed by Mr. William Jennings Bryan.

REPUBLICAN CANDIDATES FOR PRESIDENT AND VICE-PRESIDENT

REPUBLICAN NATIONAL CONVENTION AND PLATFORM. In December, 1919, the Republican National Committee at Washington decided to call the National Convention at Chicago on June 8, 1920, the number of delegates to be 984. In January, 1920, a plan for drafting the platform went into effect. This consisted partly in the sending out of questionnaires in order to ascertain the opinion of a large number of citizens. On the information thus derived and from other sources, a series of reports was prepared for the platform committee. The Convention met at Chicago on June 8th, and was called to order by Mr. Will H. Hayes, Chairman of the National Committee. The opening address was delivered by Senator Henry Cabot Lodge of Massachusetts who presided over the first session. He expressed those views upon the League of Nations which had long been familiar to the public as characteristic of the group of politicians that he represented. He accepted the question definitely as an issue in the campaign declaring that the people must decide what they thought of Mr. Wilson's League and the sacrifice of America. He praised the Senate's opposition to the Peace Treaty as patriotic and wise. The League, he said, was seen from the debate on it to be not a league for peace but an alliance, and he criticised it for not restoring the Hague Convention, for doing nothing toward the development of international law, for not providing for a world court or judicial decisions, and for taking no measures for the settlement of non-justiciable questions. This alliance, moreover, which was silent in respect to any real peace agreement, contained clauses which threatened the existence of the United States as an independent power. As time went on, he said, the opponents of the Covenant had increased until now the number who would be willing to accept it in the form in which the President brought it back from Europe was negligible. He repeated the attacks on Article X, saying it would not only drag us into every dispute and every war in Europe and the rest of the world but would oblige our soldiers and sailors to lay down their lives for causes in which they had no interest. He defended the reservations of the Senate and the Knox peace resolution. In regard to other foreign matters he favored a firm Mexican policy under the Monroe Doctrine and censured the Mexican policy pursued by the administration; and he objected to the President's request for a mandate in Armenia on the ground that it would mean a sacrifice of American lives for an indefinite period and that the American people had already shown their sympathy for Armenia by giving them more than \$40,000,000 for her relief. In respect to domestic policy he said that it was impossible to carry out the necessary economic measures and especially the tariff legislation so long as a Democratic free trader of socialistic tendencies was in the White House.

At the second session, June 9, Senator Lodge was retained as permanent chairman, and Senator Watson of Indiana was elected chairman of the committee on resolutions. This committee was in session for nearly forty-eight hours and seemed in danger of splitting on the issues presented, especially on that of the League of Nations. The irreconcilable group headed by Senators Johnson, Borah, McCormick and others threatened to bolt if the Convention endorsed the League. At the third session, June 10, how-

ever, the committee on resolutions reported a final agreement on the part of the members and declared that the platform would be presented in a unanimous report.

The nominations were made at the session of June 11. General Leonard Wood was nominated by Governor Allen of Kansas; Hiram Johnson by Charles L. Wheeler of California; Senator Warren G. Harding of Ohio, by former Governor Frank B. Wills of Ohio; Governor Frank O. Lowden by Congressman William B. Rodenberg of Illinois; Governor Calvin Coolidge of Massachusetts, by Congressman H. Gillett, Speaker of the House of Representatives; Governor William C. Sproul of Pennsylvania by Major J. Hampton Moore of Philadelphia; Herbert Hoover of New York by Judge Nathan L. Miller of New York; Nicholas Murray Butler of New York, by Senator Ogden Mills of New York. Other candidates were Messrs. LaFollette, Pritchard, Sutherland, Poindexter, Du Pont, Borah, Knox, Watson and Warren. For four days the balloting took place with no choice in sight. General Wood whose ballot was the largest, namely 287½ at the first vote, received 314½ at the fourth. Lowden came next with 211½ at the first and 289 at the fourth. Johnson stood third receiving 133½ on the first with 140½ on the fourth. Harding came next with 65½ on the first, falling to 61½ on the fourth. There appeared to be no definite group in control and the choice at this time was largely a matter of speculation, but even then it was believed that a combination had been formed to prevent the nomination of Wood and Lowden; and it was believed that Senator Johnson was out of the running. The objections to Wood and Lowden arose mainly from alleged disclosures in regard to money contributions in their primary campaigns. After the seventh ballot the name of Senator Harding began to come rapidly forward and on the eighth ballot his vote increased to 113½. During the recess that followed the friends of Wood and Lowden rallied in the hope of effecting a combination that would check the Harding movement, but did not succeed, and when the ninth ballot was taken Harding led with 374 votes, Wood falling from 299 on the eighth to 248 on the ninth, Lowden from 307 to 121½, and Johnson to 82. The success of Harding was now assured and on the tenth ballot he received 692½ votes, that is, 200 in excess of a majority. For Vice-President the chief nominations were Governor Coolidge of Massachusetts, Senator Lenroot of Wisconsin and Governor Allen of Kansas. On the first ballot Governor Coolidge received 674½ votes. The Convention adjourned, June 12. The platform as summarized by the *Political Science Quarterly* contained the following main features:

Declares that the "outstanding features of the Democratic Administration have been complete unpreparedness for war and complete unpreparedness for peace"; pledges itself "to end executive autocracy and to restore to the people their constitutional Government"; praises the work of the Republican Congress in enacting a "program of constructive legislation"; recognizes the justice of collective bargaining as a means of promoting goodwill in industry as well as the justice of government initiative to reduce the frequency of strikes and lock-outs; denies the right to strike against the government; favors the establishment of impartial tribunals to investigate facts relative to labor disputes in public utilities, the decisions of such tribunals to be morally but not legally binding; advocates impartial commissions and better facilities for voluntary mediation, conciliation and arbitration to settle disputes in private industries; favors the establishment of an executive budget and the reorganization of federal departments and bureaus to secure a more business-like distribution

of functions; declares the President's refusal to sign the resolution repealing war-time legislation an intolerable usurpation, deserving the severest condemnation; pledges the party to a more just and simple system of taxation; opposes government ownership and operation or employee operation of the railroads; affirms the party's faith in the protective principle "for the preservation of the home market for American labor, agriculture, and industry"; declares in favor of a privately owned merchant marine, and recommends that all ships engaged in coastwise trade and all vessels of the American merchant marine pass through the Panama Canal without premium of tolls; declares in favor of revising the immigration laws to keep out undesirable and the naturalization laws to test more adequately the alien's fitness for citizenship; demands that every American citizen enjoy the ancient and constitutional right of free speech, free press and free assembly, but that no one be allowed to advocate resistance to law or the violent overthrow of the government; condemns the "vigorous malpractice of the Departments of Justice and Labor" in dealing with alien agitators; urges Congress to consider the most effective means to end lynching; promises to care generously for the maimed and disabled men of the recent war; urges Republican legislatures to ratify the suffrage amendment to enable the women of the nation to participate in the election of 1920; endorses the principle of federal aid to the states for vocational and agricultural training; favors a federal child labor law; severely arraigns the foreign policy of the Administration as "founded upon no principle and directed by no definite conception of our nation's rights and obligations" as "humiliating to America and irritating to other nations," and favors "a liberal and generous foreign policy, founded upon definite moral and political principles, characterized by a clear understanding of and firm adherence to our own rights, and unflinching respect for the rights of others"; condemns as ineffective the policy of the Administration in Mexican matters and pledges the Republican party to a "consistent, firm and effective policy toward Mexico that shall enforce respect for the American flag and that shall protect the rights of American citizens in Mexico to security of life and property"; condemns the President for asking Congress to empower him to accept a mandate for Armenia, the acceptance of which "would throw the United States into the very maelstrom of European quarrels," and finally declares that the covenant signed by the President at Paris failed signally in promoting agreement among the nations to preserve the peace of the world, that it contained stipulations "not only intolerable for an independent people but certain to produce the injustice, hostility and controversy among nations which it proposed to prevent," and that the coming Republican Administration will bring about "such agreement with the other nations of the world as shall meet the full duty of America to civilization and humanity in accordance with American ideals and without surrendering the right of the American people to exercise its judgment and its power in favor of justice and peace."

DEMOCRATIC NATIONAL CONVENTION. The Democratic National Committee at Washington decided, January 7-8, to hold the Democratic National Convention at San Francisco, June 28, and the call was formally issued, January 13, providing for the meeting of 1092 delegates. There was much less interest in the pre-convention Democratic campaign than in the Republican, and the Democratic presidential preference primaries were of comparatively slight importance. Certain States had favorite candidates. For example, the Ohio primary chose Governor Cox; the Pennsylvania primary, Attorney-General Palmer; the Oklahoma convention instructed its delegates to vote for Senator Owen; the North Carolina convention, for Senator Simmons; the Nebraska primary, for Senator Hitchcock. Only about 300 of the Democratic delegates were instructed. The chief candidates before the convention were Governor James M. Cox of Ohio, Mr. William G. McAdoo, former Secretary of the Treasury, and Mitchell Palmer, Attorney-General. The Democratic National Convention began its opening session at San Francisco, June 28 with a show of great enthusiasm for President Wilson, declaring him the unquestioned leader of his party and praising the achievements of his administration. The "keynote speech"

was made by the chairman, Senator Cummings. He attacked the Republicans as responsible for the rejection of the Treaty and contrasted the blameless record of the Democratic financial administration during the war with that of the Spanish-American war. He said that over \$40,000,000,000 had passed through the hands of the Democratic administration and that no Democrat officially had even been suspected of corruption. Senator Joseph T. Robinson of Arkansas was chosen permanent chairman and Senator Carter Glass of Virginia was chosen chairman of the committee on resolutions. The latter reported at the platform, July 2. There had been a contest in respect to the platform between the "wets" and "drys," the former led by Mr. W. Burke Cochran of New York and the latter by Mr. William Jennings Bryan. Mr. Bryan's "dry" plank was defeated before the Convention by 929½ to 155½ and the "wet" plank of his opponent was defeated by 726½ to 356. The platform as reported contained no mention of Prohibition. Mr. Bryan was again on the losing side in respect to the League of Nations. He presented a plank for ratification with reservations, which was lost by a large majority. The question of sympathy with Ireland was brought before the Convention with a view to making it a part of the platform. This was also rejected by a large majority.

There were ten candidates presented for nominations, namely: James M. Cox of Ohio; Homer S. Cummings of Connecticut; Edward I. Edwards, Governor of New Jersey; James W. Gerard of New York (former ambassador to Germany); Gilbert M. Hitchcock, Senator from Nebraska; William G. McAdoo of New York (former Secretary of the Treasury); Edwin T. Meredith of Ohio, (Secretary of Agriculture); A. Mitchell Palmer of Pennsylvania (Attorney-General); Alfred E. Smith (Governor of New York); Robert L. Owen (Senator from Oklahoma). To these were added on the following day, F. M. Simmons, Senator from North Carolina; Carter Glass, Senator from Virginia; Ambassador John W. Davis of W. Virginia; and Francis Burton Harrison, Governor-General of the Philippines. An important decision was reached in regard to the representation of women in future conventions, the Convention deciding that full sex equality should be observed and that in the future the National Committee should include one man and one woman from each State.

The voting began, July 2, and the first vote stood as follows: McAdoo, 286; Palmer, 256; Cox, 134; Smith, 109; Edwards, 42; Owen, 33; Davis, 32; Meredith, 27; Glass, 26½; Cummings, 25; Gerard, 21; Hitchcock, 18; and scattering, 102. The two-thirds necessary for nomination was 729. At the twenty-second ballot, July 3, Cox was in the lead with 430 votes against 372 for McAdoo, but the latter regained the first place in the thirteenth ballot, July 5. At the thirty-sixth McAdoo had 399; Cox, 371; and Palmer, 241. At the thirty-eighth Mr. Palmer released his delegates and at the next vote Cox had 540½. There was again a gain for Cox and a loss for McAdoo on the next ballot and on the forty-fourth ballot Cox received the nomination. For Vice-President Franklin D. Roosevelt of New York, Assistant-Secretary of the Navy was chosen by acclamation. The main features of the platform as summarized by the *Political Science Quarterly* were as follows:

©Underwood & Underwood

JAMES M. COX

©Underwood & Underwood

FRANKLIN D. ROOSEVELT

DEMOCRATIC CANDIDATES FOR PRESIDENT AND VICE-PRESIDENT

3

It hails "with patriotic pride the great achievements for the country and the world" wrought by the Democratic Administration of President Wilson; declares "the League of Nations . . . the surest, if not the only, practical means of maintaining the permanent peace of the world and terminating the insufferable burden of great military and naval establishments" and advocates "the immediate ratification of the treaty without reservations which would impair its essential integrity," but does not "oppose the acceptance of any reservations making clearer or more specific the obligations of the United States to the League associates"; praises the Administration's conduct of the war; extols the federal reserve system and the financing of the war and condemns the attempt of the Republican party "to drag our public finance and our banking and currency system back into the arena of party politics"; condemns the failure of the Republican Congress to respond to the President's demand for the readjustment of the tax laws to peace conditions and denies Republican claims of economies; holds the Republican party responsible for the failure to restore peace and peace conditions in Europe, "which is a principal cause of post-armistice inflation the world over," declares that "the high cost of living can only be remedied by increased production, strict governmental economy and a relentless pursuit of those who take advantage of post-war conditions and are demanding and receiving outrageous profits," and condemns the waste of money by Congress "in vain and extravagant investigations" which revealed nothing "beyond the incapacity of Republican politicians to cope with the problems"; reaffirms Democratic tariff doctrines and declares for the policy of basing tariff revisions upon "the intelligent research of a non-partisan commission rather than upon the demands of selfish interests, temporarily held in abeyance"; favors the creation of an effective budget system to function "in accord with the principles of the constitution"; praises the Democratic record in establishing farm-loan banks and other farm legislation and endorses collective bargaining and researches into production costs; declares the Democratic record in establishing farm-loan banks witnessed by the creation of a Department of Labor, the passage of child-labor acts, workmen's compensation laws, the eight-hour law, etc., affirms that labor is not a commodity, that it should participate in the formulation of sound laws and regulations governing the conditions under which labor is performed, that labor and capital alike "have the indefeasible right of organization, of collective bargaining and of speaking through representatives of their own selection," that neither should at any time take action that would jeopardize the public welfare, that in private industrial disputes compulsory arbitration though plausible in theory, has been a failure in fact, that with respect to government service, the rights of the people are paramount to the right to strike, and that instant inquiry into the pay of government employees and equally speedy regulations designed to bring salaries to a just and proper level should be made; endorses the equal suffrage amendment and urges the Democratic governors and legislatures of Tennessee, North Carolina and Florida to complete the process of ratification in time to enable all the women to participate in the fall election; declares against child labor, in favor of child welfare, maternity care, vocational education, better conditions for working women and the reclassification of the civil service with a view to equality of the sexes; advocates generosity to disabled soldiers and declares in favor of the enactment of soldier-settlements and home-aid legislation; commends federal administration of the railroads during the war, declaring it efficient and economical despite inadequate and outworn equipment, and criticizes the Transportation Act, which the President was forced to sign upon pain of throwing the railroad situation into chaos; favors the continuance of federal aid in road building; claims credit for the restoration of the American merchant marine and pledges the party to a policy of its continued improvement; pledges ample appropriation for the continuation and extension of reclamation; endorses the creation and the work of the Federal Trade Commission; pledges itself to enact legislation for the supervision of livestock markets; upholds the President's Mexican policy and advocates the recognition of the new Mexican government when it has shown its ability to maintain order; declares that the United States should render every possible and proper aid to the people of Armenia in their efforts to maintain a government of their own; expresses its sympathy with the people of China, Czechoslovakia, Finland, Poland, Persia and others who have recently established representative government, and "within the limitations of international comity and usage" repeats previous expressions of sympathy for Ireland in its aspirations for self-government; favors the granting of independence to the Philippines without unnecessary delay; favors the granting to Porto Rico of the traditional territorial form of government, with a view to ultimate statehood; supports the policy of non-admission of Asiatic immigrants; defends the Post-Office Depart-

ment "against a malicious and designing assault" and favors the fair and just treatment of all government employees; denies the alleged interference of the Administration with the freedom of the press and freedom of speech; and finally pledges itself to the enactment of laws strengthening the present statutes against corrupt practices, in view of the "shocking disclosures of the lavish use of money by aspirants for the Republican nomination" and the recent conviction of a Republican Senator from Michigan, upon whose seat "the present organization of the Senate with a Republican majority was made possible" by the criminal transgression of the law limiting expenditures on behalf of a candidate for the United States Senate.

SOCIALIST NATIONAL CONVENTION. The nominating convention of the Socialist party was held in New York City May 8-14. The platform was framed by Mr. Morris Hillquitt of New York and was criticized by the extreme radicals as too conservative. The Convention voted the majority report of its committee on foreign relations, May 14th, declaring that the Socialist party of America adhered to the "Third International," but on the understanding that its international delegates should not be bound to the acceptance of any special means of attaining the Socialist commonwealth, as for example, by a dictatorship of the proletariat. Its adherence to the International was not to be subject to such a condition and delegates to the International were also to be instructed to take part in movements for the unifying of Socialist bodies throughout the world into a single international organization. A radical substitute offered by the minority of the committee, which merely declared the adherence of the party to the Third International without any qualifications, was voted down by 90 to 40. The Convention nominated for President, Eugene V. Debs, who was serving a ten years' sentence in the Federal penitentiary at Atlanta for violation of the Espionage Act. His name was received with great enthusiasm. A committee was appointed to present a petition to Attorney-General Palmer for the release of Debs, declaring that the practice of condemning citizens for the expression of views opposed to the party in power was repugnant to the spirit of democracy and that all the other Powers that had taken part in the war had pardoned their political offenders. It added that the plea that the United States was still at war was merely a quibble.

The Convention debated for a long time the question whether the Socialist party should retain its declaration that it did not purpose to interfere with the internal affairs of labor unions and it finally decided to retain it but added a statement to the effect that it approved the organization of workmen into a single working-class body, in other words, the One Big Union programme. After a debate in which churches and religion were alternately attacked and defended, it decided against any references to capitalist control of churches.

FARMER-LABOR CONVENTION. Representatives of the Committee of Forty-Eight, the Non-Partisan League, and other dissident groups met in convention at Chicago, July 11. Senator R. M. La Follette of Wisconsin refused to stand on a national ticket and the convention nominated for President Parley P. Christensen of Salt Lake City, Utah, and for Vice-President Max S. Hayes of Cleveland, O. Meanwhile several factions including the Single Tax group had withdrawn from the meeting. The platform was based in general upon the principles for which the Committee of Forty-Eight had for two years been

contending in its propaganda (see **FOETY-EIGHT, COMMITTEE OF**). It insisted that the two old parties were maintained by "the invisible government" of this country in order to "confuse the voters with false issues." Specifically it demanded among other things: Restoration of right of free speech, etc.; protection of workingmen's right to strike; amnesty of political prisoners; election and recall of Federal judges; withdrawal from participation under the Treaty of Versailles in the subjection of conquered peoples; instant lifting of the blockade against Russia; immediate repeal of the Esch-Cummins law; public ownership of railways, mines, and natural resources, etc.; legislation on behalf of the farmers; increased share of labor in control of industries; right of civil service employees to organize; and a long programme of social legislation in respect to hours of work, workingmen's insurance, pensions, women in industry, abolition of private employment of detective and strike-breaking agencies, etc.

SOCIALIST LABOR CONVENTION. The National Convention of the Socialist Labor party was held in New York City, May 5-10, the delegates numbering about fifty and representing twenty States. It nominated for President William W. Cox of St. Louis, organizer for the Workers' International Industrial Union; and for Vice-President, August Gillhaus of Brooklyn. In its platform it described itself as "the only party in this country that blazes the trail to the Workers' Industrial Republic." After denouncing modern capitalist society and declaring that private property in the means of life has become a social crime, it called upon the wage-workers to organize themselves into a revolutionary political body and "to organize themselves likewise upon the industrial field into a Socialist industrial union, as now exemplified by the Workers' International Industrial Union, in keeping with their political aims."

PROHIBITION CONVENTION. The Prohibition party met in National Convention at Lincoln, Neb., July 22, and adopted as the principal plank in its platform the condemnation of attempts to nullify the Eighteenth Amendment, saying, "The organized liquor traffic is engaged in a treasonable attempt to nullify the amendment by such modification of the enforcement act as will increase the alcoholic content of beer and wine and thus thwart the will of the people as constitutionally expressed. In face of this open threat the Republican and Democratic parties refused to make platform declarations in favor of law enforcement though petitioned to do so by multitudes of people. Thus the Prohibition party remains the sole champion of national prohibition. . . . The issue is not only the enforcement but also the maintenance of the law to make the amendment effective. . . . The proposed increase in the alcoholic content of beverages would be fraught with grave danger in that it would mean the return of the open saloon with all its attendant evils." The convention nominated for President Aaron Sherman Watkins.

THE ELECTION. The extent of the Republican victory exceeded the most sanguine predictions of the party's prophets. The vote for Harding was 16,181,289 and for Cox, 9,141,750, giving the former a plurality of 7,039,539. The vote of the Presidential electors was: Harding, 404; Cox, 127. The Socialist candidate Eugene V. Debs received 941,827 votes (exclusive of eight States

for which returns were not available at the close of the year and which gave 23,582 votes for the Socialist candidate four years before). The Prohibition vote in the 24 States in which it had a column on the ballot was 195,923; and the Farmer-Labor vote in the eighteen States in which it had a column on the ballot was 350,267. The women's vote was not segregated from the men's except in Illinois (q.v.). For votes by States, see articles on States, paragraph *Elections*.

Both Houses of Congress were carried by the Republicans. According to the unofficial figures of the Clerk of the House at the close of the year the Republicans in the new House numbered 307; the Democrats, 127; and the Socialists, 1; a Republican majority of 179, the largest in the history of the party. Members of the existing House who were not returned numbered 119. The only Socialist elected was Mr. Meyer London of New York. The only woman elected was Miss Alice M. Robertson of Oklahoma. In the Senate the Republicans retained all the seats they held and gained 10 from the Democrats. Their actual majority was 22.

Tennessee went Republican by a majority of 12,000. West Virginia, Mississippi, Maryland, and Oklahoma also went Republican, and Kentucky remained Democratic by a narrow margin. There were also gains in various localities regarded as strongholds of "solid" Southern Democracy.

UNITED STATES MILITARY ACADEMY. An institution for the practical and theoretical training of cadets for the military service of the United States. Since the World's War the mission of West Point became the preparation of officer personnel for the next possible future war. It is situated at West Point, N. Y., and was opened in 1802. The strength of the corps of cadets was 1020. The maximum authorized strength of the corps is 1334. There were about 180 officers in the faculty. The funds of the institution are appropriated annually by Congress. The candidates must be between the ages of 17 and 22, but it was provided that in the calendar years 1919, 1920 and 1921, any appointee who had served honorably in the armed forces of the United States or in the armies of the Allies in the late war and possessed the other qualifications might be admitted up to the age of 24. From 1802 to 1920 inclusive, the number of cadets has been 6809. Superintendent, Brigadier-general Douglas MacArthur, U.S.A.

UNITED STATES NAVAL ACADEMY. A school for the training and education of naval cadets, situated at Annapolis, Md.; founded in 1845. In 1920 there were enrolled 1803 midshipmen and the faculty numbered 245. Candidates are selected by competitive examination or otherwise for mention by Senators, representatives and delegates in Congress. The law authorizes the appointment of 100 enlisted men each year by a competitive examination. The candidates are required to be citizens of the United States and the age limits are 16 to 20 years. There are strict qualifications in regard to physical ability. The course lasts four years. Superintendent, Rear-admiral A. H. Scales, U.S.A.

UNIVERSALISTS. Statistics for 1920 for this denomination show that it had a total membership of 55,000 with 550 ministers and 617 churches while the Sunday Schools show a membership of about 55,000. The year 1920 marked

PROMINENT REPUBLICAN PRESIDENTIAL CANDIDATES

the 150th anniversary of the founding of the Universalist Church in America and was fittingly celebrated at Good Luck, N. J. where John Murray, the founder, first landed, and in Gloucester, Mass., where he held his first pastorate. Over 10,000 persons attended the latter celebration. The "Great Drive" of 1919 for a million dollars for advancing the work of the church is being followed by "The Murray Anniversary Crusade" to double the membership of the preaching and teaching of many other churches. Missionary work is maintained in Japan with headquarters in Tokyo, a new church and school plant in Shizuoka, made possible by the money Drive, and a distinctive social service work in Nagoya. Home missionary work is being done in the South and West where there are few Universalist churches at the present time. The Women's National Missionary Association unites the women of the church in both Home and Foreign Missions. Theological schools are maintained at Tufts College, Mass., St. Lawrence University, Canton, N. Y., and Chicago University. Secondary schools are maintained as follows: Dean Academy, Franklin, Mass., Goddard Seminary, Barre, Vt., Westbrook Seminary, Portland, Me., and a school for negroes at Suffolk, Va. The secretary of the denomination is Rev. Roger F. Etz, Boston, Mass.

UNIVERSITIES AND COLLEGES. ATTENDANCE. The statistics of registration of thirty universities for the academic year 1918-19 have been gathered and published by Dr. Raymond Walters. These institutions enrolled a total of 183,620 students. If we exclude the summer enrolment, New York University with 11,237 students heads the list. California comes second with 9435 students. Michigan, Columbia, Illinois, Minnesota, Pennsylvania, Wisconsin, Northwestern and Ohio State follow in the order named, each having in excess of 6000 students. When the enrolment includes the summer school, Columbia, with 15,828 students, ranks first. California has 12,609 students, New York University, 12,017 students, and Chicago, Michigan, Wisconsin, Illinois, Minnesota and Pennsylvania stand in the order named, each with more than 8000 students.

The total enrolment in these institutions, including summer schools, was 103,853 in 1914. The total registration of these thirty institutions showed a gain of 47 per cent over the registration for 1914. The most noteworthy gain made by any institution in this five-year period was New York University with 107 per cent advance in regular enrolment.

College and university registrations as reported to the *Evening Post* by registrars throughout the country up to October 22 indicate a very considerable increase over the previous year. The increase in attendance at various institutions has created some very perplexing problems. Dormitory and housing facilities are being taxed to the utmost. Northwestern University has been compelled to limit the number of women students because of its inability to provide for them. Various institutions are at present compelled to provide for classes of such numbers as would have been deemed impossible to instruct only a few years ago. Single classes enrolling 100 or more students are comparatively common. There are instances where the number approaches 1000. It remains to be seen how effective instruction can be under these conditions.

The great increase in attendance comes at a time when it is difficult to secure properly trained instructors who are willing to accept the comparatively small salaries offered by colleges and universities. As a result, there is a rather keen competition among the institutions, some of which because of their inability to raise the salaries have lost a large proportion of their promising young instructors.

INCOME OF COLLEGES AND UNIVERSITIES. In the course of the year the Bureau of Education made public a report showing in detail the income of normal schools and of colleges and universities for fifty years from 1870 to 1920, inclusive. According to these figures the income of the normal schools in 1920 was \$27,000,000 or about 130 times as much as in 1870. During the same period the income of colleges and universities was increased about 36 times, being \$182,000,000 in 1920.

College administrators and the officers who are concerned with the control of the normal schools insist that the income for their institutions must be greatly increased or the colleges and universities will be compelled to discontinue some of the lines of their present efforts. Some of the universities completed the year ending June 30, 1920, with very large deficits. Yale University, for example, had a deficit that represented approximately the income on a \$10,000,000 endowment. The alumni of that institution came to its rescue and gave an amount that more than met the indebtedness.

The movement toward higher tuition fees, which has been in progress for the past few years, continued during the past year. The amount received from these increases, however, is comparatively small and in many institutions the number of free scholarships has been increased in order to assist worthy students. During the past several years institutions have received large endowments and the state universities have been given increased appropriations. Considering the increase in students and the higher costs, it is doubtful whether the colleges and universities of the country are in as good condition financially as they were in 1914. If the increase in attendance continues, as it bids fair to do, the endowed institutions and the States will face the problem of doubling their facilities during the next decade.

GIFTS AND BENEFACTIONS. During 1920 a large number of the institutions of higher learning made successful efforts to secure increased endowments. Increased resources were generally sought for the purpose of increasing the salaries of instructors and meeting increased demands for research. The excessive cost of building has prevented any considerable extension of plants. Among the more noteworthy gifts and benefactions announced during the year are the following: Mr. J. Ogden Armour has made a further gift of \$6,000,000 to the Armour Institute. Bates College is to receive \$500,000 from the fund to be raised by the Northern Baptist Convention. Bowdoin College receives \$150,000 by the will of the late Dr. Thomas Upham Coe. Brown University received \$500,000 from John D. Rockefeller, Jr.; \$250,000 from Louisa and Jesse H. Metcalf, and \$100,000 by the will of the late Rush C. Hawkins. The University of Buffalo received \$250,000 from an anonymous giver and \$400,000 from Mr. O. E. Foster.

The Carnegie Corporation gave \$250,000 to the Medical College of the University of Cincinnati to endow a chair in memory of Dr. Christian R. Holmes. Cornell University received \$100,000 from Mr. W. G. Mennen and Mrs. Emma Mennen Williams. Cornell also received \$500,000 from August Hecksher. Dartmouth College will ultimately receive more than \$300,000 by the will of the late Richard K. Tyler. Under the will of Sanford H. Steele, Dartmouth receives \$250,000 for instruction and research in chemistry. Denison University received \$1,000,000 from Col. E. A. Deeds. The University of Maine received \$150,000 by the will of the late Dr. Thomas Upham Coe. Under the will of Mrs. Georgiana B. Wright Harvard University becomes the residuary legatee of an estate valued at more than \$1,000,000. The University of Michigan has received an anonymous gift of \$1,000,000, and an endowment of \$2,000,000 from Levi H. Barbour for the education of women of the Far East. Mount Holyoke College received \$100,000 from Edward S. Harkness.

New York University received \$100,000 from Dr. William H. Nichols. Under the will of the late Rush C. Hawkins Norwich University becomes residuary legatee of an estate valued at more than \$300,000. The College of Homœopathy of the Ohio State University received \$400,000 from Charles F. Ketter for medical research. The family of Henry Phipps has given \$500,000 to the Henry Phipps Institute of the University of Pennsylvania for the study of tuberculosis. Radcliffe College received \$175,000 by the will of the late Annette Perkins Rogers. Vanderbilt University received \$250,000 by the will of the late William K. Vanderbilt. Throop College of Technology received an anonymous gift of \$1,000,000. Wesleyan University received approximately \$1,000,000 by the will of the late William F. Armstrong. Under the will of the late Ohio C. Barber Western Reserve University will receive nearly \$5,000,000. By the will of the late Francis Lynde Stetson Williams College receives a residuary estate valued at more than \$1,000,000. The University of Vermont received \$100,000 by the will of the late Rush C. Hawkins. Yale University received an anonymous gift of \$150,000 for a department of university health. Yale also received \$300,000 from William L. Harkness.

On January 1, 1920, Mr. John D. Rockefeller gave to the General Education Board the sum of \$50,000,000 to be used in the discretion of that Board in increasing salaries of instructors in colleges and universities. During the year the General Education Board has appropriated to 98 colleges a total of \$12,851,666 on condition that these institutions add the sum of \$30,613,334. This would make a total of more than \$43,000,000 added to the endowment for teachers' salaries.

Never before has there been such a determined effort to increase endowments. The following institutions have started endowment drives that would net over \$80,000,000: Brown University, \$3,000,000; Bryn Mawr, \$3,000,000; Chicago University, \$10,000,000; Cornell University, \$10,000,000; Harvard University, \$15,250,000; Mt. Holyoke College, \$3,000,000; New York Post Graduate Medical School, \$2,000,000; New York University, \$6,450,000; Princeton University, \$14,000,000; Smith College, \$4,000,000; Teachers College, Columbia University, \$6,000,000; Uni-

versity of Cincinnati, \$2,000,000; Wesleyan University, \$3,000,000.

To a very large extent the institutions concerned have been successful in their drives. A considerable number of other institutions have increased their endowments by amounts varying from \$500,000 to \$1,000,000. It is well within bounds to predict that the increase in the endowments of institutions of higher learning during the year 1921 will be in excess of \$100,000,000. This will be more than one-fourth as much as the total endowment, including all productive funds owned by all colleges and universities as late as 1915.

THE CARNEGIE FOUNDATION FOR THE ADVANCEMENT OF TEACHING. The Fourteenth Annual Report of the President shows that the trustees held in trust on June 30, 1919, the following securities given at their face value: For general endowment, bonds and other securities amounting to \$13,192,000; for the Division of Educational Enquiry \$1,250,000; a reserve fund to be used, principal and interest, in the payment of pensions accruing after 1928, \$7,031,000; a reserve fund to be used in assisting institutions hereafter admitted to association with the Foundation, either in retiring allowances or in assisting in the inauguration of the contributory plan, \$320,000; and an emergency reserve \$165,000, making a total of \$21,958,000. The President reported a total income of \$1,555,987.60, and, in addition, \$50,486.55 from the Endowment of the Division of Educational Enquiry. The current expenditures for the year were as follows: Retiring allowances and pensions to officers and teachers and widows, a total of \$828,385.58; expenses of administration \$49,359.97; publication \$10,888.62, making a total expenditure from general endowment of \$888,634.17. The expenditures for the Division of Educational Enquiry were: General, \$4,824.85; study of legal education, \$8,685.11; study of training of teachers, \$16,058.08; study of engineering education, \$5,986.78—a total of \$35,554.82. A total of 530 persons received allowances from the Foundation. The allowances vary in amount from \$338.78 to widows of professors and officers in institutions not on the associated list to \$2000.92 for professors and officers in institutions on the associated list, retired on the basis of age. The general average of retiring allowances is \$1,547.59.

The President considers many matters relating to the work of the Foundation, in particular the new contributory method of teachers' allowances is discussed in detail. The section devoted to the Division of Educational Enquiry discusses current tendencies in education and describes the investigations conducted by the division in the matter of justice and the poor, legal education and the training of teachers.

The part of the report which has received greatest attention is entitled "College Government and the Teacher's Salary." President Pritchett says that "at the present time many of the endowed universities and colleges are appealing to the public for sums of money that before the war would have been considered out of all proportion to the ability of the public to give. The basis of the request is in nearly all cases the desire and the necessity of increasing the salary of the college teacher." President Pritchett is in accord with the plan of raising the salary of professors who attain a high order

of usefulness, either as teachers or as investigators. He regards this as a matter of simple justice.

The report raises some doubt regarding the efficiency of our universities. It states: "The larger American universities are spending to-day more money annually than was ever spent by any institution in the world devoted to teaching and to research. The American university has expanded into this expensive and highly complicated institution in the last twenty-five years, from the undergraduate college. Its growth has been like that of a government bureau, almost wholly by accretion. Graduate schools, professional schools, departments of research have been superimposed on the college without any consistent coordination of undergraduate and professional activities. A department once begun is never cut off. The American university to-day is a congeries of schools and departments rather than an organic institution."

The report further asserts: "Research in various fields of knowledge has been attempted by nearly all institutions of university rank. The development of a true spirit of research is a necessary part of every true university, but much of that which has gone on in American universities under the name of research is in truth only an imitation of research, and upon it great sums of money have been expended. In the sharp competition for the reputation supposed to come to a university from carrying on research, the obligation to teach has become less and less realized, and the teaching of undergraduates, in some of our great institutions, is poor. In some institutions there is slight opportunity for the great body of students to come in contact with a real teacher."

President Pritchett urges that the increasing of salaries alone will not bring about the desired results within our universities. He says: "The question is really one of making the profession itself a calling to which men shall be attracted by the intellectual and cultural opportunities which it presents."

The article closes with the two questions: What is the primary purpose of the university? And how far may that purpose be diluted or impaired by the extension of university activities into new fields?

ENTRANCE REQUIREMENTS. The use of intelligence tests for determining the fitness of students to enter college is becoming quite general. During the past year many of the important colleges and universities have employed the tests and are now watching the results in order to determine their reliability. In every case the use of intelligence tests is optional with the student.

The entrance requirements of colleges and universities are undergoing a gradual change in the direction of easier and more satisfactory admissions from the public schools. During the year Dartmouth College has made an announcement of the new requirements to go into effect at the beginning of the academic year 1921-22. In announcing the new plan President Hopkins states: "The evidence in hand indicates that in the great majority of cases the man who shows marked ability in his school work preparatory to college demonstrates like ability in college work. It is to such men in approved schools that Dartmouth would offer a significant procedure for qualifying for entrance to the Col-

lege. It is to this group further that Dartmouth would definitely assure admission under circumstances in which of necessity the College can admit but a decreasing proportion of those who apply for enrolment in its student body."

The vote of the faculty reads as follows: "Beginning with the year 1921-22 any student from an approved school graduating with an average in scholarship for the four years of his school course, which places him in the first quarter of his class, and offering three units of English and two and one half units of mathematics among his list of subjects, will be admitted without condition."

The University of Pennsylvania has announced two changes in entrance requirements to go into effect September, 1921. The first of these involves admission from approved schools. The University proposes to keep a record of all approved schools and to classify each school not only by the work that its graduates have done prior to entering the University, but by the records they make while in the University. Students who apply for admission by certificate from secondary schools will in general be admitted if they rank in the upper half of their graduating class. If, however, the group of students certified to the University by a given school during the two or three previous years did work that averaged considerably above the average of the freshman class in the University, then that school will be granted the privilege of certifying students from the upper three-quarters of its graduating class and in cases where the work of the University has been extremely good, the school may obtain the privilege of certifying from the whole of its graduating class.

On the other hand, if the work done in the University by students from the school has fallen below the average of the freshman class in the University, then that school will have the privilege of certifying students only from the upper quarter of its graduating class.

The second change relates to the admission of students graduating from a first-class school, but whose rank may not be high enough to secure a certificate. Such students may secure admission either by comprehensive examinations in four subjects, one of which must be English, the others optional with the applicant, or, they may elect to take an examination in their ability to use the English language and to supplement this by a general intelligence test to determine the applicant's mental power and alertness.

Harvard College has also announced changes in admission requirements. Heretofore candidates who entered Harvard under the so-called "old plan" have been required to pass examinations in studies amounting to sixteen and one half units of school work, except that those who presented both elementary Latin and elementary Greek were admitted without condition on fifteen and a half points of school work. The number of units required for admission has now been reduced fifteen and the Committee on Admissions has been authorized also to admit without conditions final candidates whose combined school and examination records justify the belief that they are ready for college work, even if their examination record is slightly defective. The present absolute minimum of fourteen points for such persons remains in force.

For the purpose of making the requirements somewhat more flexible, the so-called "new plan"

of admission, which has been in effect for several years and provides that a candidate must present evidence of an approved school course satisfactorily completed and must show in examinations in four important subjects that his scholarship is satisfactory, has been modified so that the candidate's school course need not necessarily have extended over four years. Candidates will now be admitted if their school course has been the equivalent of four years' study, and they are able to meet the other requirements. Exceptions are also made to the requirement that the candidate's school course must have included languages, science, mathematics and history. If the candidate is an exceptional student, he will not be excluded because he has omitted one of these subjects.

It is expected that these changes will make it easier for boys to pass the entrance examinations, who have prepared at high schools which are not accustomed to training boys for Harvard.

INTERNATIONAL EDUCATIONAL RELATIONS. *The Institute of International Education.* This Institute was established February, 1919, by the Carnegie Endowment for International Peace. As stated by one of its directors, its general aim is to develop international good will by means of educational agencies and to act as a clearing house of information and advice for Americans concerning things educational in foreign countries and for foreigners concerning things educational in the United States. The Institute pays the travelling expenses of professors on sabbatical leave who are willing to lecture in foreign universities and have been invited to do so. Fifteen such professors were sent out during 1920. Several European professors have been assisted in coming to this country to lecture at various colleges and universities.

The Institute has entertained many distinguished visitors and commissions upon their arrival in this country. Dr. Stephen P. Duggan of 419 West 117th St., New York City, is the executive officer of the Institute.

THE AMERICAN-SCANDINAVIAN FOUNDATION. This Foundation has established 20 travelling fellowships of a value of at least \$1,000 each to be awarded to students, men and women, for technological research and humanistic study in the universities of Sweden, Denmark, and Norway.

AMERICAN FIELD SERVICE FELLOWSHIP FOR FRENCH UNIVERSITIES. The Society for American Field Service Fellowships for French Universities has offered fellowships, not to exceed 25, to graduates of American colleges for research in French universities during 1921-22. The fellowships are granted for one year and renewable for a second year. They have an annual value of \$200 and 10,000 francs. The chairman of the Advisory Board is Prof. Raymond Weeks, Columbia University, and the Executive Secretary is Dr. I. L. Kandel, 522 Fifth Avenue, New York City.

FRENCH SCHOLARSHIPS. The French Government has provided 20 scholarships in French lycées and six scholarships in French universities to highly qualified American girls for the academic year 1920-21.

FOREIGN STUDENTS IN AMERICAN INSTITUTIONS. The Committee on Friendly Relations among Foreign Students has recently published a directory of foreign students in the institutions of the United States. The directory shows that there are 6636 foreign students scattered in 466

institutions. Of these 533 students are found in 20 institutions in California. The State of Illinois has 725 students, representing 65 countries, located in 41 institutions. A total of 586 students, coming from 72 different countries, are in 25 institutions in Massachusetts. New York leads in the number of foreign students, having 1210 students from 80 different foreign countries scattered throughout 36 institutions.

The proper care of this large number of students involves a question of great importance. The United States is receiving a considerable number of students from the Far East and an increasing number from the South American countries. There is every indication that students from these sections will come in still greater numbers. In general, they represent those who will become leaders when they return to their respective countries, and through them the United States has the opportunity to establish relationships that will be very desirable. In few institutions, however, is there any understanding or appreciation of the difficulties that confront these students. In general, instructors are not familiar with the social, economic and political conditions that obtain in the student's home country. Consequently the instruction that is offered is often inadequate. Various institutions have been giving this matter careful and intelligent consideration. In addition, several prominent organizations are lending their aid in the matter. Among these is the Commission for Relief in Belgium's Educational Foundation. This Foundation, which is considered one of the greatest in the world, provides for the education of about 5000 students. Last September 23 Belgian students were given scholarships in American universities.

The Association of American Colleges has brought to this country and placed in different universities 182 French girls and about 20 French men. These students receive scholarships paying college fees and living expenses. Boston University has arranged for an exchange of professorships in mathematics for the present academic year with Tsing Hua College, Peking, China.

NEW PRESIDENTS. The close of 1920 finds many colleges and universities without presidents. The institutions of higher learning have lost the services of those who for a generation have been among the educational leaders of the country. Among these men may be named Dr. Edmund James James, President of the University of Illinois since 1904, Dr. Jacob Gould Schurman, President of Cornell University since 1892, Dr. Arthur Twining Hadley, President of Yale University since 1899, Dr. Edgard Fahs Smith, Vice-Provost and Provost of the University of Pennsylvania since 1899, and Dr. Charles William Dabney, President of the University of Cincinnati since 1904. The institutions concerned have known in advance of the presidents' actions, yet none of these positions has been filled.

The difficulties which universities have experienced in securing properly qualified presidents have led to considerable discussion during the year regarding the proper type of college and university administrator. Some have maintained that the man of affairs should make the most competent college president. Dartmouth College made such a selection and their experience has been very happy. Yet almost without exception other institutions have sought their presidents from the so-called academic group.

Among the persons who have been elected to college presidencies are the following: Dr. William J. Hutchins was made president of Berea College. Dr. Wallace W. Atwood was elected president of both Clark University and Clark College. Dr. Thomas J. Marshall is the new president of Glendale College. Dr. Clarence W. Greene was elected president of Hedding College. Dr. A. H. Upham was made president of the University of Idaho. Dr. D. J. Evans was chosen president of William Jewell College. Dr. Arthur Andrews was appointed president of the Junior College at Grand Rapids. Dr. E. H. Lindley is the new chancellor of the University of Kansas. Dr. James M. Gordon has been made the head of Henry Kendall College.

Dr. Marion L. Burton was made president of the University of Michigan. Dr. Lotus D. Coffman is the new president of the University of Minnesota. Dr. Walter D. Scott was made president of Northwestern University. Dr. Dice R. Anderson was elected president of Randolph-Macon Woman's College. Rev. William F. Robinson was appointed president of St. Louis University. Dr. J. G. Bowman is the new chancellor of the University of Pittsburgh. Rev. Ranson Brinkerhoff Ogilby was made president of Trinity College. Dr. Rees Tulloss was made president of Wittenburg College. Rev. William Fletcher Quillian is the new president of Wesleyan College. Dr. Alice Hill Byrne is the new president of the Western College for Women. Dr. Guy W. Bailey was elected president of the University of Vermont.

NEW INSTITUTIONS. *The Ford Technical Institute.* The Ford Motor Company of Detroit has announced the establishment of an educational department having university rank. The Institute will grant degrees in mechanical, electrical, and chemical engineering. The Institute occupies buildings of its own which are most completely equipped for the type of instruction given. The Institute has opened with as large an enrolment as the capacity will permit and there is a waiting list composed of many of the most promising technological students of the country.

School of Medicine, Surgery and Dentistry, University of Rochester. The University of Rochester has received \$5,000,000 from the General Education Board and \$4,000,000 from Mr. George Eastman to establish in the City of Rochester in connection with the University a School of Medicine, Surgery and Dentistry.

Goodyear Industrial University. Early in the year the Goodyear Industrial University at Akron, Ohio, was formally opened. The institution occupies Goodyear Hall, which is the recreational and educational institution of the Goodyear Tire and Rubber Company. The institution opened with a faculty of 117 instructors and over 5700 students in 600 separate classes. The announcement states that "the university is fundamentally an industrial institution, teaching such branches of academic and scientific work as are necessary for the development of American industry in addition to regular courses." The 30,000 or more persons employed by the Goodyear Company may receive instruction varying from rudimentary grade school studies to standardized post-graduate courses without tuition.

TEACHER TRAINING. The scarcity of teachers and the increasing importance placed upon education has served to focus attention upon the training of teachers.

Early in the year there was an official announcement of the Harvard Graduate School of Education with an endowment of \$2,000,000. At the opening of the school last September, 90 students were enrolled. About one-third of these students were women. The admission of women as candidates for the Harvard degree is an innovation.

Yale University has established a Department of Education in connection with the Graduate School of the University. The announcement states that the purposes of instruction in education are the following: (1) To prepare both men and women for service in the educational field, especially in public schools. Courses are designed to fit superintendents, supervisors, principals, directors of special activities, research specialists, normal and college instructors in education, and classroom teachers, for the distinct types of service that each must render. (2) To contribute through research to the solution of practical problems of organization, administration, instruction, and hygiene in schools of all grades. (3) To render expert, practical assistance to school officials, especially in Connecticut, in the immediate solution of their school problems.

UNIVERSITY UNION, AMERICAN, IN EUROPE. The American University Union in Europe was founded on July 15, 1917, by a group of university and college men in New York City. It had two purposes: First, to devote itself to the general well-being of the university and college men who were to cross the sea to fight, or to serve the cause of the Allies in other ways; and, second, to become, after the war, a permanent agency for attracting students to Europe for study, for turning the stream of American students to the institutions of learning of the Allied countries, and for cultivating closer educational and intellectual relations between Europe and America. The organization is controlled by a Board of Trustees directly and broadly representative of American universities, colleges, and educational associations. Some fifty of the more important American institutions are subscribing members. On October 30, 1917, the Union in Paris which had taken over the Royal Palace Hotel, opened that hotel as a club freely accessible to American university and college men who were serving the Allies in Europe. On June 31, 1919, the Union as a club for American soldiers closed its doors, and turned to its permanent task—educational work. The Union now fulfills several functions. It is a center for American students in Paris, with a library furnished with American papers and periodicals, and accommodations for study, at their disposal. It is a bureau of information for American students, both men and women, where they can apply for advice regarding the institutions of learning, Parisian or provincial, the conditions and formalities of admission to them, courses that can be advantageously followed, the degrees offered to foreigners, the exchange of French and English lessons, the vacation courses in Paris and in the provinces, the best schools for learning the French language, the cost of living, the procuring of lodgings, etc. Catalogues of the important establishments of higher learning in France are on file for reference. The Union is also a bureau of information for French students or professors who desire information concerning American institutions of learning, the

conditions of entrance for foreigners, the courses, etc. The catalogues of such institutions are on file for ready reference. Attention is given also to the social side of student life, and by reunions and sociabilities an endeavor is made to establish contacts that will widen the students' French horizons. Finally, the Union aims in general to diffuse among American universities and colleges all sorts of information concerning the educational advantages open to Americans in France, and to offer in France information concerning what America has to present in the same fields. In this aspect, its purpose is to be a clearing-house of international educational information.

The Union is represented in London by its British Division, the Union in Paris being properly known as the Continental Division. The offices of the British Division are at 50 Russell Square, W.C.1., London. There a work is carried on for England analogous to the work done in Paris.

UPPER AUSTRIA. Before the downfall of the Austro-Hungarian Empire, a crownland of Austria. Area, 4626 square miles; population (1911), 853,006, of whom 843,146 were Austrian subjects. Capital, Linz.

UPPER SENEGAL AND NIGER. A constituent colony of the government-general of French West Africa. (q.v.)

UPPER SILESIA. A region comprised within former Prussian Poland, whose limits were indeterminate throughout the year, awaiting settlement by plebiscite (see below, *History*). Estimated area, 13,230 square miles; estimated population 1,931,240. The chief interest in the region arises from its great mineral wealth. In regard to its resources in this respect, the following information was supplied by the United States Bureau of Foreign and Domestic Science in 1920. Reports for the year 1919 showed that in 1919 there were 63 anthracite coal mines operating in Upper Silesia, wherein 1235 steam-hoist engines were used and 388 electric motors were in use, as against 405 in the preceding year. There was 35 per cent less coal produced in the mines in 1919 than in the previous year; 21,204,043 tons of coal were shipped from these mines in 1919, as against 36,113,360 tons in 1918 and 40,337,215 tons in 1913. Iron production has decreased considerably in the last 10 years in Upper Silesia, as is shown below: 1901, 457,126 tons; 1913, 138,204 tons; 1918, 62,194 tons; 1919, 61,469 tons. Pig-iron production has been as follows: 1913, 994,601 tons; 1918, 696,146 tons; 1919, 459,954 tons. The value of pig-iron and its by-products amounted to 186,420,000 marks in 1919, as against 125,890,000 marks in 1918. Foundry production declined 30 per cent in 1919 as compared with 1918. Upper Silesia produced 24,451 tons of steel castings in 1919, as against 97,757 tons in the previous year. The same district produced 439,227 tons of ingot iron, or only 34 per cent of the production in 1918. The production of wrought iron decreased by 51 per cent. The production of crude zinc amounted to 74,023 tons, valued at 138,608,000 marks, as against 122,961 tons, valued at 110,890,000 marks, in 1918. The production of lead in Upper Silesia in 1919 was 17.7 per cent less than for 1918, and the production of silver declined by 27 per cent. The total number of miners employed in Upper Silesia in 1919 was 226,445. After the repatriation of war prisoners this num-

ber was reduced to 233,339. Among the miners employed here in 1919 was a large number of Russian prisoners of war who are now regarded as settled workmen.

HISTORY. The Peace Conference, in view of the large majority of Poles in the region, proposed to return Upper Silesia to Poland, but owing to the protests of the Germans, decided to leave the question to a plebiscite. According to the Poles and their friends, the Germans from that time on resorted to every device that could prevent the people from attaching themselves to Poland. They were accused of planning secretly to use force and of organizing rifle clubs, defense organizations, etc., to that end. They hoped to carry this policy to success when in the summer months Poland was threatened with destruction at the hands of the Bolsheviks. Disappointed in this, they resorted to other means, especially to propaganda. They promised the Upper Silesians self-government and tried to persuade them that they would have a far greater measure of liberty under German than under Polish rule. They gave them to understand that the country would form an independent part of Germany like Bavaria and that the people would decide everything that pertained to their own affairs. They would have moreover their representatives at Berlin. This went too far for the "Old Prussians" who regarded Upper Silesia as belonging especially to Persia. To transform Silesia into an independent German state would rob Persia of its conquest. To meet this objection it was said that after the plebiscite changes might be made in the arrangement, thus implying that the claims of Prussia might subsequently be recognized. At the close of the year French and Polish writers were accusing the Germans of trying to control the plebiscite, and of planning extensive German colonization of the region. There was a rumor that Germany had proposed to Poland a compromise whereby the country would be divided between Germany and Poland without resorting to a plebiscite. The rumor was denied, but the denial was attributed to German propaganda. The matter was the subject of incessant controversies to the close of the year. See **WAR OF THE NATIONS**.

URUGUAY. A South American republic bounded by Brazil, Argentina, and Bolivia. Capital, Montevideo.

AREA, POPULATION, ETC. Area, estimated at 72,153 square miles; population, Dec. 31, 1918, at 1,429,585, giving a density per square mile of 19.2. The population in 1908 was 1,042,686. The population of Montevideo, Jan. 30, 1919, was 361,452. Among other large cities are Paysandu and Salto, each with 24,000 inhabitants. The movement of population in 1918 was as follows: Births (exclusive of still births), 38,914; deaths, 20,009; marriages, 6843. In 1918, the immigrants at Montevideo numbered 180,687 and the emigrants, 177,254. Of the immigrants, 8779 were Spanish; 5459 Italian; 5023 Brazilian; 3241 English; 1411 French; and 1143 German. In 1919 there were 995 schools in operation, as compared with 985 in 1918. The pupils registered in 1919 numbered 106,905, as compared with 105,379 in 1918. The average attendance in 1919 was 79,749 pupils, as compared with 81,294 in 1918. The great majority of the inhabitants are Roman Catholic.

PRODUCTION. The chief products are wheat,

barley, oats, linseed, live-stock and wine. Tobacco and olives are also produced. There are several gold mines worked in the north and there are resources of silver, copper, lead, magnesium, and lignite. The acreage and yield of principal crops in 1918 and 1919 was as follows: Wheat, 849,472 acres and 187,523 metric tons; oats 85,744 acres and 18,701 metric tons; linseed, 52,275 acres and 12,660 metric tons; barley 5197 acres and 1578 metric tons. The industrial census of 1918 shows that there were in operation in the Republic 16,017 industrial and commercial establishments, with a capital of 134,383,782 pesos, and real-estate holdings amounting to 67,414,125 pesos.

COMMERCE. The total imports and exports for Uruguay during 1919 were 75,745,070 and 147,289,957 in gold pesos (worth \$1,034 each at par).

RAILWAYS. The three main lines of railway are the Central (984 miles), the Midland (501 miles), and the East Coast (71 miles). All of these were under British ownership. The lines of standard gauge open for traffic Jan. 1, 1917, had a mileage of 1654 of which 1060 were under state guarantee. The railway receipts for the fiscal year ending June 30, 1919, were 10,156,034 pesos as compared with 8,624,732 pesos during the preceding year.

GOVERNMENT. For an account of the constitution which came into force March 1, 1919, see preceding YEAR BOOK. The executive power is in a president and a national administrative council, and the legislative power in a parliament of two houses, namely the Senate and the Chamber of Representatives. President of the republic in 1920, Dr. Baltasar Brum (elected for the term March 1, 1919, to Feb. 28, 1923).

UTAH. POPULATION. According to the preliminary report of the census of 1920, there were 449,396 residents in the State, January 1, 1920, as compared with 373,351 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 25,664, an increase of 18.4 per cent since 1910. The following table was compiled from the estimates of the United States Department of Agriculture, for the years, 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	24,000	521,000	\$782,000
	1919	18,000	324,000	488,000
Wheat	1920	280,000	5,366,000	8,210,000
	1919	294,000	8,542,000	7,438,000
Oats	1920	78,000	3,143,000	2,514,000
	1919	72,000	2,448,000	2,399,000
Hay	1920	588,000	1,416,000	17,955,000
	1919	541,000	1,085,000	22,307,000
Potatoes	1920	17,000	8,298,000	2,688,000
	1919	17,000	2,397,000	3,284,000

* Tons.

MINERAL PRODUCTION. The value of the gold, silver, copper, lead, and zinc produced from mines in Utah in 1920, according to the United States Geological Survey, was about \$46,000,000, a slight increase over that in 1919. The output of gold and copper decreased considerably and that of silver decreased slightly, but that of lead and zinc increased. The average prices of lead and zinc were higher than in 1919, but the prices of copper and silver were slightly lower. In general, production was retarded by the continued high costs of mining, milling, smelting, and refining, and in August the increased freight rate on ore and bullion added another handicap to mining. The mine production of gold decreased

from \$2,159,471 in 1919 to approximately \$1,949,000 in 1920, a decrease of nearly 10 per cent. Most of the gold was obtained from siliceous, copper, and lead ores that were treated at smelting plants. More than half the output of gold in the State was made in the Bingham district, about 30 per cent in the Tintic district, and the remainder in the Park City and other camps. The mine output of silver decreased from 11,649,961 ounces, valued at \$13,047,956, in 1919 to about 11,618,000 ounces, valued at \$12,664,000, in 1920. The average price for the year was about \$1.09 an ounce. The mine production of copper decreased from 124,061,807 pounds in 1919 to nearly 117,000,000 pounds in 1920. The average price was slightly less, and the value of the output decreased from \$23,075,496 to about \$19,991,000. The mine output of lead increased from 123,829,051 pounds in 1919 to about 134,000,000 pounds in 1920. The value of the output increased from \$6,562,940 to about \$10,939,000. There was an increase of about 35 per cent in the production of recoverable zinc. The mine output increased from 4,431,024 pounds in 1919 to about 6,000,000 pounds in 1920, and the value of the output increased from \$323,465 to about \$487,000. In 1920 the mines in Utah produced about 6,900,000 tons of ore, an increase from 6,745,423 tons in 1919. Of this total, the Bingham district produced about 6,400,000 tons, as compared with 6,086,379 tons in 1919. The estimated production of the district was 49,061 ounces of gold, 1,534,800 ounces of silver, 112,000,000 pounds of copper, 52,194,000 pounds of lead, and 1,853,000 pounds of recoverable zinc.

MANUFACTURES. The preliminary statement of the U. S. Bureau of the Census in respect to the State's manufactures showed a consistent increase at the census of 1919, as compared with that for 1914. In the order of their importance from a percentage standpoint, the increase for the several items rank as follows: Capital, 99.6 per cent; salaries, 99.3 per cent; wages, 97.2 per cent; value added by manufacture, 85.7 per cent; value of products, 80 per cent; cost of materials, 77.7 per cent; primary horsepower, 54.9 per cent; salaried employees, 40.7 per cent; wage earners, 35.5 per cent; proprietors and firm members, 9 per cent; and number of establishments, 4.5 per cent. The capital invested, as reported in 1919, showed a gain of \$71,523,000, or 99.6 per cent, over that in 1914. The average capital per establishment was approximately \$124,000 in 1919 and \$65,000 in 1914. The cost of materials used in 1919 showed an increase over that for 1914 of \$48,372,000 or 77.7 per cent. The average cost of materials per establishment in 1919 was approximately \$95,000, and in 1914 \$56,000. The value of products in 1919 showed an increase over that in 1914 of \$69,692,000, or 80 per cent. The average per establishment in 1919 was approximately \$135,000 and in 1914 \$79,000. The value added by manufacture in 1919 showed an increase over that in 1914 of \$21,320,000, or 85.7 per cent. The value added by manufacture in 1919 formed 29.5 per cent of the total value of products and in 1914, 28.6 per cent. In 1919, as compared with 1914, the number of salaried employees showed an increase of 909, or 40.7 per cent, while the average number of wage earners increased 4,933, or 35.5 per cent. A comparative summary for the state for 1914 and 1919 follows:

	Census—		Per cent. of increase, 1914-1919
	1919	1914	
Number of establishments	1,159	1,109	4.5
Persons engaged in manufactures	23,058	17,126	34.6
Proprietors and firm members	1,089	999	9.0
Salaried employees	3,142	2,283	40.7
Wage earners (average number)	27,064,000	13,696,000	97.6
Primary horsepower	\$143,366,000	\$71,843,000	99.6
Capital	92,236	59,536	54.9
Services	18,827	13,894	35.5
Salaries	5,668,000	2,844,000	99.3
Wages	21,396,000	10,852,000	97.2
Materials	110,605,000	62,283,000	77.7
Value of products	156,804,000	87,112,000	80.0
Value added by manufacture (value of products less cost of materials)	46,199,000	24,879,000	85.7

FINANCE. The auditor's balance, Nov. 30, 1919 was \$1,106,605; the gross receipts during the year were \$15,279,995; gross expenditures, \$14,771,827; auditor's balance, November 30, 1920, was \$1,614,772. The State's bonded indebtedness November 30, 1920 was \$8,410,000; total mortgage, bonded, and floating indebtedness, \$159,687,901.

ELECTION. The vote in the presidential election of 1920 was: Harding (Republican), 81,555; Cox (Democrat), 56,639; Christensen (Farmer-Labor), 4475; Debs (Socialist), 3159, as compared with the following vote in the presidential election of 1916: Wilson (Democrat), 84,145; Hughes (Republican), 54,137; Benson (Socialist), 4460. The vote for governor was: Mabey (Republican), 83,518; Taylor (Democrat), 54,913; Locke (Socialist), 2843; Crosby (Farmer-Labor), 2300; and for United States Senator: Smoot (Republican), 82,566; Welling (Democrat), 56,280.

UTAH. UNIVERSITY OF. A co-educational State institution, at Salt Lake City, consisting of the schools of Arts and Sciences, Education, Mines and Engineering, Medicine, Law, Commerce and Finance and the Extension Division. It is conducted on the quarterly plan, and was founded in 1850. In the summer quarter of 1920, there were 924 resident students enrolled, of whom 240 were men and 684 women. For the fall session the enrolment was 1808 of whom 1049 were men and 759 women. There were 163 members in the faculty. The library contained 62,197 books and 22,315 pamphlets. The income for the year was estimated at \$400,000. A R. O. T. C. gun shed and a stable for the R. O. T. C. horses were erected on the campus, the government having maintained one of the units at the University. About one hundred ex-service men received vocational rehabilitation training at the institution. President, Andreas Widtsoe, Ph.D., LL.D.

VAIL, THEODORE N. Organizer of the telephone industry, died April 16. He was born in Carroll County, Ohio, July 18, 1845; went to school at Morristown, N. J.; studied medicine for two years and subsequently studied and entered the railway mail service in which he was General Superintendent in Washington from 1875 to 1878. Realizing the great possibilities of the telephone, he went into the telephone business in the latter year and devoted many years to the task of developing it. In this he was highly successful. He interested himself in the telephone and electric systems in various South American cities. In 1907, he became President of the American Telegraph and Telephone Company and he was president or director of many other corporations and important scientific and

learned bodies in the United States and Great Britain. It was said of him that he did more than any other man in the building up of the telephone business and in bringing the telegraph service into coöperation with the local and long-distance telephone services. When the Post Office Department assumed control of the wires as a war measure he became its chief adviser.

VALDERRAMA, CARLO. See MUSIC, Artists, Instrumentalists.

VALLE DE PAZ, EDGARDO DEL. Italian composer, died in Florence, April 5. He was born in Alexandria, Egypt, Oct. 28, 1861. After pianistic tours of Italy and Egypt he settled in Florence in 1890 as teacher at the Conservatory. From 1896-1914 he also was editor of *La Nuova Musica*. His compositions include an opera, *Oriana*, orchestral suites and chamber-music.

VALUE, BEVERLY REID. Civil engineer, died June 10. He was born at Montgomery, Ala., April 7, 1863. From 1886 to 1891 he was executive engineer of the new Croton dam in New York, and he was division engineer in New York in 1900-3, during the construction of the subways in New York City. He was also chief engineer in the development company which provided the plant on Niagara River in 1903-6 and was subsequently engaged in important constructions on the Susquehanna.

VANDERBILT, WILLIAM KISSAM. Capitalist, died July 23. He was born on Staten Island, Dec. 2, 1849. After an academic education and several years study at Geneva, Switzerland, he went into the railway service and from 1877 to 1883 he was second vice-president of the New York Central and Hudson River Railway. He became afterwards director of the New York Central and many other lines as well as official or director in numerous trade and social organizations. He was founder and president of the New Theatre and an organizer of several leading clubs in New York City.

VANDERBILT UNIVERSITY. A Methodist-Episcopal, co-educational institution at Nashville, Tenn., founded in 1873. There were 1161 students enrolled in 1920, and the faculty numbered 182. The productive funds of the institution amounted to \$3,400,000, and the income for the year was \$250,000. The library contained 78,000 volumes. Chancellor, J. H. Kirkland, LL.D., Ph.D.

VAN LAER, ALEXANDER THEOBALD. Artist, died March 12. He was born in Auburn, N. Y., Feb. 9, 1857; studied art in New York City at the Academy of Design and the Art Students' League and later in the Netherlands. He exhibited at the leading American exhibitions and received the bronze medal at the Charleston ex-

position. He was lecturer on art history for several years at Chautauqua and gave free lecture courses in the State of New York during twenty-four years.

VASSAR COLLEGE. A non-sectarian institution of the higher learning for women at Poughkeepsie, N. Y., founded in 1861. The enrolment for the fall of 1920 was 1089. The faculty numbered 144. The productive funds amounted to \$2,242,683 and the income for the year was \$852,508. There were 110,000 volumes in the library. President, Henry Noble MacCracken, Ph.D., LL.D.

VEAL. See LIVE STOCK

VEGETABLES. See HORTICULTURE.

VENEZUELA. A South American republic on the northern coast, bounded on the east by British Guiana and on the south by Colombia. Capital, Caracas.

AREA, POPULATION, ETC. The area is estimated at 398,594 square miles. The population was officially estimated Dec. 31, 1917 at 2,844,618; density, 7 per square mile. Important cities with their estimated population are as follows: Caracas, 86,880; Valencia, 54,387; and Maracaibo, about 50,000. Primary education is free and nominally compulsory. No later figures were available than those given in the preceding **YEAR BOOKS**.

PRODUCTION. The chief industry is the raising of coffee. The area under coffee plantations has been estimated at 250,000 acres. As to mineral production the asphalt resources are among the richest of the world, and are situated in the eastern and western division. Although Venezuela is probably a potentially large producer of oil, its petroleum production at the present time is small, due principally to the fact that as yet there has been but little actual development. At the end of the first half of 1920 the gross production of the country had reached the total of 162,829 metric tons (1 metric ton=2,204.6 pounds), all of which, with the exception of 151 metric tons, had been produced by one company, the Caribbean Petroleum company.

COMMERCE. Imports of foreign merchandise in Venezuela during 1918 were much less, both in weight and in value, than in the previous year. This was due to the difficulty in obtaining goods, as demand in Venezuela was as great as ever and the ability of the purchasing public to pay for articles desired was perhaps greater than at any previous time. Imports in 1918 and 1917 respectively were 114,964,886 and 77,244,950 bolivares; exports, 120,024,360 and 102,650,154 bolivares (1 bolivar equals \$0.193).

In 1917 imports from the United States were 70 per cent of the total value of all imports and 64.5 per cent of the total value of all imports excluding gold coin. In 1918 the United States supplied 64.6 per cent of the imports by weight and 60.2 per cent in value.

The balance of trade between the United States and Venezuela has been heavily in favor of the latter. For the 12 months ended June 30, 1919, the United States bought from this country produce to the value of \$19,732,709 and sold to it goods worth \$9,275,680.

RAILWAYS. The total length of the railways in 1920 was given at 1039 kilometers, distributed as follows: Guaira to Caracas Railway, 37; Great Railway of Venezuela, 183; Puerto Cabello to Valencia Railway, 55 kilometers; Bolivar Railway, 232; Great Tachira Railway, 120; Great

Railway of La Ceiba, 85; Central Railway of Venezuela, 73; Carenero Railway, 54; Guanta to Barcelona Railway, 36; Santa Barbara to El Vigia Railway, 60; La Vela to Coro Railway, 13; and other railways, 90 kilometers.

FINANCE. The following figures for the budget estimates were supplied by the Pan-American Union for the fiscal year ending June 30, 1921: Receipts, 59,612,000 bolivares; expenditures, 58,538,600 bolivares. The estimated revenues are as follows: Import duties, including parcel-post duties, 14,700,000 bolivares; cigarette taxes, 8,600,000 bolivares; revenues from liquors, 7,500,000 bolivares; from salt mines, 6,700,000 bolivares; stamp taxes, 6,500,000 bolivares; and other revenues, 15,612,000 bolivares. The estimated expenditures are: Department of interior, 12,166,529 bolivares; department of foreign relations, 1,927,203; department of the treasury, 16,889,808; department of war and marine, 11,101,521; department of fomento, 5,300,509; department of public works, 6,246,420; department of public instruction, 4,328,181; and other expenditures, 578,429 bolivares.

GOVERNMENT, ETC. The executive power is in the president who has a cabinet of 7 ministers (Foreign Affairs, Interior, Finance, Public Instruction, Public Works, Fomento, and War and Marine.) Legislative power is in a Congress of two houses, the senate and chamber of deputies. President in 1920, General Juan Vincente Gomez.

HISTORY. In October, it was reported that a revolt had broken out in Venezuela under the leadership of General Penaloza who was said to have entered the country from Colombia, and captured garrisons and seized large supplies of ammunition. The reports indicated that the government troops were on their way from Maracaibo into the disturbed region, which was in the less civilized portions of western Venezuela.

VENIZELLOS, ELEUTHERIOS. Prime Minister of Greece, regarded by many as the foremost of European statesmen; retired in 1920 and left the country on the return of ex-King Constantine. (See GREECE, *History*, and WAR OF THE NATIONS.) On August 12, an attempt to assassinate him was made at the Lyons railway station in Paris by two Greek officers reputed to be supporters of ex-King Constantine. He was slightly injured and recovered from his wounds soon afterwards.

VENKATASWETA, MAHARAJAH OF BOBBILI. British-Indian official and author, died Sept. 12. He was born, Aug. 28, 1862 and became president of the Imperial League at Madras. He was the first Indian member of the Madras executive council in 1910 and was prominent for his activities in public charitable work. He published several chronicles of Bobbili and also *Advice to the Indian Aristocracy*.

VERMONT. **POPULATION.** According to the preliminary report of the census of 1920, there were 352,428 residents in the State, January 1, 1920, as compared with 355,956 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 29,072, a falling off of 11.1 per cent since 1910. The following table was compiled from the estimates of the United States Department of Agriculture, for the years, 1919 and 1920:

Crop	Year	Acres	Produce Bu.	Value
Corn	1920	25,000	1,175,000	\$1,480,000
	1919	22,000	1,034,000	1,810,000
Oats	1920	81,000	2,885,000	2,126,000
	1919	85,000	2,550,000	2,295,000

Crop	Year	Acreage	Produc. Bu.	Value
Hay	1920	923,000	1,383,000	30,620,000
	1919	923,000	1,564,000	31,401,000
Potatoes	1920	27,000	3,510,000	4,888,000
	1919	25,000	2,500,000	3,925,000

c Tons.

MANUFACTURES. Preliminary figures published by the United States Bureau of the Census showed a consistent increase at the census of 1919, as compared with that for 1914. In the order of their importance from a percentage standpoint, the increases for the several items rank as follows: Cost of materials, 122.9 per cent; salaries, 118.7 per cent; value of products, 118.4 per cent; value added by manufacture, 112.9 per cent; wages, 83.3 per cent; capital, 67.8 per cent; salaried employees, 30.9 per cent; primary horsepower, 6.4 per cent; wage earners, 2.5 per cent; and number of establishments and proprietors and firm members, 1.1 per cent. The capital invested, as reported in 1919, showed a gain of \$54,173,000, or 67.8 per cent, over that in 1914. The average capital per establishment was approximately \$75,000 in 1919 and \$45,000 in 1914. The cost of materials used in 1919 showed an increase over that for 1914 of \$52,469,000 or 122.9 per cent. The average cost of materials per establishment in 1919 was approximately \$53,000, and in 1914 \$24,000. The value of products in 1919 showed an increase over that in 1914 of \$91,168,000, or 118.4 per cent. The average per establishment in 1919 was approximately \$94,000 and in 1914 \$43,000. The value added by manufacture in 1919 shows an increase over that in 1914 of \$38,699,000, or 112.9 per cent. The value added by manufacture in 1919 formed 43.4 per cent of the total value of products and in 1914, 44.5 per cent. In 1919, as compared with 1914, the number of salaried employees showed an increase of 842, or 30.9 per cent, while the average number of wage earners increased 830, or 2.5 per cent. A comparative summary for the state for 1914 and 1919 follows:

FINANCE. Cash on hand, July 1, 1919, \$557,-

	Census—		Per cent. of increase, 1914-1919
	1919	1914	
Number of establishments.....	1,792	1,772	1.1
Persons engaged in manufactures.....	38,908	37,217	4.5
Proprietors and firm members.....	1,806	1,787	1.1
Salaried employees.....	3,568	2,728	30.9
Wage earners (average number).....	83,534	82,704	2.5
Primary horsepower.....	185,107	173,937	6.4
Capital.....	\$134,020,000	\$79,847,000	67.8
Services.....	41,530,000	22,002,000	88.8
Salaries.....	7,404,000	3,385,000	118.7
Wages.....	34,126,000	18,617,000	83.3
Materials.....	95,175,000	42,706,000	122.9
Value of products.....	168,159,000	76,991,000	118.4
Value added by manufacture (value of products less cost of materials).....	72,984,000	34,285,000	112.9

716; receipts during the fiscal year including temporary loans and bonds issued (\$2,000,000), \$6,788,631; disbursements, \$5,381,226; cash on hand, June 30, 1920, \$1,965,122. Total indebtedness, June 30, 1920, \$2,907,737.

EDUCATION. The following figures are for June 30, 1920 with the exception of that for teachers which is for December, 1920: School enrollment, 61,785; average daily attendance, 50,186; number of teachers (elementary), 2120; total amount paid for salaries of teachers (elementary), \$1,313,157; total expenses for educational purposes, \$3,089,406.

CHARITIES AND CORRECTIONS. The State in-

stitutions with their situations are as follows: State Prison and House of Correction, Windsor; State Hospital for the Insane, Waterbury; Soldier's Home, Bennington; Vermont Industrial School, Vergennes; Brattleboro Retreat (for the insane), Brattleboro; State School for the Feeble-minded, Brandon.

ELECTION. The vote in the presidential election 1920 was: Harding (Republican), 68,212; Cox (Democrat), 20,919; as compared with the following vote in the presidential election of 1916: Hughes (Republican), 40,250; Wilson (Democrat), 22,708. The vote for governor was: Hartness (Republican) 65,940; Martin (Democrat), 18,555; and for United States Senator: Dillingham (Republican), 70,541; Shaw (Democrat), 19,590.

OFFICERS. Governor, James Hartness; Lieutenant-Governor, Abram W. Foote; Secretary of State, Harry A. Black; Treasurer, Walter F. Scott; Auditor, Benjamin Gates; Attorney-General, Frank C. Archibald.

JUDICIARY. Supreme Court: Chief Justice, James H. Watson; Associate Justices, George M. Powers, William H. Taylor; Willard W. Miles; Leighton P. Slack.

VERMONT, UNIVERSITY OF. A co-educational State institution at Burlington, Vt., founded in 1791. In the summer school of 1920 there were 442 students enrolled and in the regular fall session, the enrolment was 617 men and 313 women. The faculty numbered 127, including 15 additions. There were 103,000 bound volumes and 40,000 pamphlets. President, Guy W. Bailey.

VETERINARY MEDICINE. The annual meeting of the American Veterinary Medical Association, the fifty-seventh, was held at Columbus, Ohio, August 23-27, at which Dr. Davis S. White of Columbus, Ohio, was elected President and Dr. M. Jacob of Knoxville, Tenn., Treasurer, Dr. N. S. Mayo of Chicago continuing as Secretary. At this meeting 314 new members were elected to membership. The next annual meeting will be held at Colorado Springs, Colo. The twenty-

fourth annual meeting of the Live-Stock Sanitary Association was held at Chicago, Ill., Nov. 29 to Dec. 1, at which Dr. W. F. Crewe of Bismarck, N. D., was elected President, and Dr. T. A. Burnett of Columbus, Ohio, Secretary.

VETERINARY EDUCATION. The educational standard has been gradually raised during the past few years and, commencing with the classes entering in the fall of 1919, a four years' high school education, or 14 units, was required for a veterinary college to be accredited and to have its graduates eligible for the civil service examination for veterinary positions in the Federal Bureau of Animal Industry.

There are now 16 accredited veterinary colleges in the United States of which 11 are State colleges with a veterinary department, 3 are private veterinary colleges and 2 are agricultural colleges that have raised their courses of study from two years to four years. There are also 9 foreign veterinary colleges on the accredited list, the College of Veterinary Science of the University of the Philippines having been added during the year. The combined attendance at all veterinary colleges in the United States was 1265, an increase of 151 over the preceding year. There were 371 graduates against 214 for the year preceding. The membership of the classes entering in the fall of 1919 was 352, against 264 for the preceding year.

NECROLOGY. The year saw the passing of several well-known veterinarians including Dr. Joseph Hughes, President of the Chicago Veterinary College, on April 24, at the age of 61; Dr. John F. Winchester of Lawrence, Mass., on April 27, at the age of 64; and Dr. Sidney F. Musselman, State veterinarian of Kentucky and President of the U. S. Livestock Sanitary Association, at Louisville on October 25, at the age of 47.

APPROPRIATIONS. The retrenchment policy of Congress led to a considerable reduction in the amounts appropriated for work by the United States Department of Agriculture. The sum appropriated for the hog cholera work was reduced to \$410,000, of which \$192,200 is to be used in field eradication. For cattle tick eradication the amount was reduced to \$681,160, and for dourine eradication work to \$65,200. For the tuberculosis campaign \$1,480,440 was appropriated, of which \$680,440 is for the payment of indemnities. The emergency appropriation of \$1,000,000 of the preceding year for use when needed in combating outbreaks of foot-and-mouth disease and other contagious affections was practically eliminated, only \$50,000 being made available.

BOVINE TUBERCULOSIS ERADICATION. Excellent progress was made in the eradication work with tuberculosis in cooperation with 45 States and the Territory of Hawaii. During the fiscal year ended June 30, 1920, there were 695,364 head of cattle tested, of which 28,616, or slightly more than 4 per cent, reacted and were removed. At the end of the fiscal year the number of accredited herds was approximately three times as large as on June 30 of the previous year. In addition to the fully accredited herds, 16,599 other herds containing 257,577 cattle passed the first official test, no reactors being found. Great public interest is being shown in this work and cattle owners are enthusiastically cooperating, the waiting list at times having included nearly 5,000 herds. A noteworthy development is the tendency to free from the disease areas containing many farms. During the year the counties of Clay in Mississippi, Island in Washington, and Clatsop in Oregon made complete tuberculosis tests of all cattle within their boundaries. The feasibility of not only freeing a region of tuberculosis but keeping it free is shown by the continuance of tuberculosis tests in the District of Columbia where but three reactors were found during the year among the 1173 head of cattle tested, and those three had been taken into the District on a health certificate. Investigations of tuberculosis among swine continue to show that they are infected principally by cattle.

In order to meet as fully as possible the demand for testing, the Federal Department of Agriculture has recognized under prescribed condition the intradermic in addition to the subcutaneous test and has obtained evidence also that the ophthalmic test, now frequently used as a check on the others, is dependable when applied by veterinarians skilled in its use.

CATTLE TICK ERADICATION. Areas aggregating 50,555 square miles, in six States formerly infested with cattle tick were released from Federal quarantine during the fiscal year ended June 30, making a total area of 509,084 square miles or 70 per cent of the area originally infested. Alabama again led the list, with 12,991 square miles placed in the unrestricted area, followed by Louisiana with 9299, Texas with 8847, Arkansas with 8130, Georgia with 6942, and Oklahoma with 4346. Sixty-two additional counties and 33 parts of counties were thus made available for the introduction of better bred cattle from tick-free States. During the fiscal year 44,813,070 inspections or dippings were made of cattle for the eradication of ticks, 35,045 dipping vats where cattle were dipped under Federal or State supervision having been in operation.

HOG CHOLERA. The records of the Meat Inspection Division of the Federal Department of Agriculture continue to show that, next to tuberculosis, hog cholera is the principal disease for which carcasses and parts were condemned. During the greater part of the year, 140 veterinarians from the Federal Bureau of Animal Industry devoted their time to the control of hog cholera, in cooperation with 34 States. Their work included the investigation of reported outbreaks, the administration of treatment, prevention of the disease from spreading, and stamping out the contagion by cleaning and disinfecting the premises, pens, and yards. Demonstrations were also conducted, veterinary practitioners were assisted in improving their technique, and general educational work was conducted.

DOURINE. In the Middle and Northwestern States, where dourine had gained a foothold, the infection is now known to exist in only two, Montana and South Dakota, and in the latter State only a few cases were found during the year. There still remains considerable work to be done in Montana in districts that are very difficult to cover. Satisfactory progress was made in Arizona and New Mexico where the disease has prevailed extensively, the greater part of the known infection in both States being within various Indian reservations. It is believed that, especially in New Mexico, the disease is under good control and that future progress should be fairly rapid. In the course of this work complement fixation tests were made of 18,468 samples of blood serum of which 257 gave positive reactions.

FOOT-AND-MOUTH DISEASE. This disease has become widespread in European countries as a result of conditions brought about by the war. England has been combatting it for nearly 2 years, Holland has been unable to keep it under control even with the application of most drastic measures, and discouraging reports have come from France, Italy, South America, and other foreign countries. In his annual report Dr. John R. Mohler, Chief of the Federal Bureau of Animal Industry, stated that every reasonable precaution is being taken to prevent its introduction into the United States, which has been free from it since the outbreak stamped out in 1916.

The danger of introduction has become greater due to its increased prevalence and virulence in Europe, since the virus may be carried in the bodies of animals, in hides, and in other live stock products. In his report Dr. Mohler called attention to the necessity for prompt action in eradicating centres of infection when introduced, and recommended that the sum of at least \$1,500,000 be made available for immediate use in case of need. When the immense value of the livestock of this country and the related interests involved are considered this seems a small amount to be made available as an insurance fund. As pointed out by Stewart Stockman, Chief Veterinarian, when freed from the disease in enzootic form Great Britain is only invaded when it is prevalent on the Continent, and the greater the prevalence the more frequent the invasions.

RINDERPEST OR CATTLE PLAGUE. This disease of cattle, sheep and goats, which is perhaps the most highly contagious and most fatal of the many diseases to which cattle are susceptible, and which has followed on the heels of European wars, has again been introduced into Western Europe. Early in July Brahman cattle from India on their way to South America were debarked at Antwerp. Later cattle shipped from America to replace the losses suffered on Belgian farms were placed in the paddocks where the zebu had been kept and from which they were shipped to their destination. As a result the disease developed at forty different points in several provinces in Belgium. This disease appeared in and spread through Poland, which country was unable to check it, and at the close of the year that country appealed to the various embassies in Warsaw for aid.

The disease, which is continually present in Asia and has within recent years become prevalent in Africa, causes enormous losses in infected herds of cattle and may even result in the almost complete extinction of animals in large areas. The first veterinary schools in France were established as a result of the great losses caused by it during the Napoleonic wars, when the disease spread over Germany and France. The losses caused by rinderpest in Germany during the 18th century are estimated at 30,000,000 cattle. The Transvaal lost 980,000 cattle in 1897, and in Cape Colony 1,300,000 animals died of the disease in the years 1897-1898. The importance of preventing its introduction into the United States cannot be too strongly emphasized.

SCABIES. In the course of the eradication work with sheep scabies 20,371,965 inspections were made and over 9,515,720 dippings in the field were supervised. In the work with cattle scabies 2,925,712 inspections were made and 1,657,418 dippings supervised. In Iowa particularly the prevalence of sheep scabies was greatly reduced, and in New Mexico excellent results were obtained with cattle scabies where the disease now exists to a slight extent only. There was an increased spread of sheep scabies in Oregon, and it is still present extensively in Southern Idaho. No progress was made toward eradication of cattle scabies in Kansas, while in the western parts of Nebraska and South Dakota and in Colorado, Wyoming, and Montana there was a considerable further spread of the infection.

SWAMP FEVER. Investigations by Scott led him to conclude that certain blood-sucking flies, *Stomoxys calcitrans* and *Tabanus septentrionalis* in particular, are capable of transmitting infec-

tious anæmia of horses, commonly known as swamp fever.

POISONOUS PLANTS. Among the investigations of poisonous plants reported upon were those by Marsh, Clawson, and Eggleston of *Baccharis pteronoides*, which is a source of losses of livestock in Arizona and New Mexico, of *Daubentonia longifolia*, popularly known as coffee bean, which poisons sheep and goats in Texas and the Gulf region, of *Astragalus tetrapterus* which is a source of losses of cattle in Utah and Nevada, and of *Asclepias galioides* or whorled milkweed which is poisonous to horses, sheep, and cattle in the Southwestern States. *Triglochin maritima*, or arrow grass, was found by Fleming and his associates in Nevada to poison sheep and cattle.

BIBLIOGRAPHY. Among the new works published were the following: E. T. Baker, *Sheep Diseases* (Chicago, 1920, 2nd ed.), F. T. Barton, *The Horse—in Health, Accident, and Disease* (London, 1920), E. Bourdelle, *Anatomic Régionale des Animaux Domestiques, III. Porc* (Paris, 1920), O. C. Bradley, *The Limbs of the Horse* (Edinburgh, 1920), A. Castellani and A. J. Chalmers, *Manual of Tropical Medicine* (London, 1919, 3rd ed. rev. and enl.), E. J. W. Dietz, *Pigeon Diseases and Feeding Management* (Chicago, 1919), F. Fyles, *Principal Poisonous Plants of Canada* (Canada Expt. Farms Bul. 39, 2nd ser., 1920), F. B. Hadley, *Principles of Veterinary Science* (Philadelphia and London, 1920), E. O. Jordan, *A Text-book of General Bacteriology* (Philadelphia and London, 1919, 6th ed. rev.), J. McFarland, *A Textbook upon the Pathogenic Bacteria and Protozoa* (Philadelphia and London, 1919, 9th ed., rev.), L. A. Merillat, *Fistula and Poll-Evil* (Chicago, 1920), A. Winslow, *Veterinary Materia Medica and Therapeutics* (Chicago, 1919, 8th ed., rev.). The *North American Veterinarian* and the *Canadian Veterinary Record* are new periodicals in this field. The *American Journal of Veterinary Medicine* changed its name with the November issue to *Veterinary Medicine*.

VICTORIA. A state of the Commonwealth of Australia in the southeastern part of the continent; next to Tasmania the smallest of the Australian states. Area, 87,884 square miles; pop. estimated Jan. 1, 1919, 1,430,758, of which 928,360 were in the towns. Capital, Melbourne, which is also the temporary capital of the Commonwealth, with a population including the suburbs, Jan. 1, 1919, of 723,500. Other large cities with population estimates of that date are Ballarat, 39,970; Bendigo, 35,590; Geelong, 34,080. In 1918, the movement of population was: Births 31,601; deaths 15,177; marriages 9156. The immigration by sea in 1918 was 48,566 and the emigration 51,631, both exclusive of members of the Australian Expeditionary forces.

Executive power is vested in a governor who acts through a responsible ministry and legislative power in a parliament of two houses: the upper house with 34 members elected for 6 years and the lower house with 65 members elected for 3 years. Governor in 1920, Earl of Stradbroke; Prime Minister, S. H. W. Lawson.

VILNA. See WAR OF THE NATIONS.

VINCENT, JOHN HEYL. Bishop, died May 9. He was born in Tuscaloosa, Ala., February 3, 1832, and began to preach at the age of eighteen. After studying at the Wesleyan Institute at Newark, N. J., he travelled as a junior preacher of the Methodist Episcopal church. He officiated for some years in New Jersey and Illinois. After 1865 he established and edited various Sunday school publications. In 1878 he founded the Chautauqua Literary and Scientific Society of which he was the chancellor to the time of his death. He was well-known as a preacher and delivered sermons at Harvard, Yale, Cornell, Wellesley and other colleges. In 1900 he was made resident bishop in charge of the European work of the Methodist Episcopal church. He wrote books on the subject of Sunday school and church teaching, and the Chautauqua movement, and outline histories of England, Greece, etc.

VIRGINIA. POPULATION. According to the preliminary report of the census of 1920, there were 2,309,187 residents in the state January 1, 1920, as compared with 2,061,612 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 186,011, an increase of 1.1 per cent since 1910. The following table was compiled from the estimates of the United States Department of Agriculture, for the years, 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	1,670,000	50,100,000	\$50,100,000
	1919	1,670,000	46,760,000	79,024,000
Buckwheat.	1920	25,000	540,000	756,000
	1919	25,000	475,000	736,000
Oats	1920	220,000	4,818,000	3,903,000
	1919	240,000	5,280,000	5,280,000
Wheat	1920	914,000	11,425,000	20,565,000
	1919	1,060,000	12,508,000	28,018,000
Rye	1920	72,000	864,000	1,339,000
	1919	80,000	920,000	1,564,000
Tobacco	1920	243,000	177,390,000	42,574,000
	1919	221,000	125,970,000	59,710,000
Hay	1920	975,000	1,266,000	29,518,000
	1919	1,025,000	1,528,000	36,250,000
Peanuts	1920	138,000	4,416,000	6,006,000
	1919	139,000	5,699,000	15,558,000
Potatoes	1920	126,000	13,608,000	12,928,000
	1919	121,000	11,495,000	18,047,000
S't Potatoes	1920	36,000	4,032,000	3,830,000
	1919	38,000	4,750,000	7,362,000
S'g'm Sirup	1920	11,000	1,100,000	1,155,000
	1919	11,000	1,023,000	1,105,000
Cowpeas	1920	63,000	693,000	2,010,000
	1919	60,000	750,000	2,400,000
Cotton	1920	39,000	19,000	1,425,000
	1919	42,000	23,000	3,942,000
Soy Beans	1920	30,000	570,000	1,767,000
	1919	30,000	555,000	2,276,000

* Pounds. * Bales. * Tons. * Gallons.

FINANCE. Balances in the State Treasury, October 1, 1919, \$1,184,518; receipts during fiscal year ending September 30, 1920, \$18,442,325; disbursements, \$16,517,994; balance in treasury, October 1, 1920, \$3,108,849; true balance of the Commonwealth, October 1, 1920, \$455,415. Public debt, September 30, 1920, \$22,350,921, a reduction of \$561,295 during the fiscal year.

EDUCATION. The population of school age in 1920 was 680,924; number of public school buildings, 6532; number of pupils enrolled, 505,190; number of teachers, 14,271; average yearly salary of teachers, \$558. See EDUCATION IN THE UNITED STATES.

LEGISLATION. Among the measures passed in the regular session of the legislature were: Establishment of agricultural experiment station (see AGRICULTURAL EXPERIMENT STATIONS); commission to study the condition of the blind; extension of powers of building and loan associations with a view to relieving housing situation; provision for examination and certification of professional engineers, land-surveyors, and architects; provisions for vocational rehabilitation of employees injured in the course of their work; regulation of fire insurance; empowering State corporation commission to regulate delivery of water, light, heat, or power by public utility corporations; provision for control and prevention of venereal diseases; authorization of industrial loan associations for the purpose of making small loans to industrial classes at low rates of interest; permission to women to qualify and serve as deputy clerks in all courts of the State.

ELECTIONS. The vote in the presidential election of 1920 was: Cox (Democrat), 141,670; Harding (Republican), 87,458; as compared with the following vote in the presidential election of 1916: Wilson (Democrat), 102,824; Hughes (Republican), 49,358. The vote for United States Senator was: Glass (Democrat), 184,646; Pollard (Republican), 17,576.

VIRGINIA, UNIVERSITY OF. A non-sectarian institution of higher learning at Charlottesville, Va., founded in 1825. There were 1816 students enrolled for the summer session of 1920, and 1638 for the regular fall session. The faculty numbered 76. The total receipts for the year were \$752,142. There were about 120,300 volumes in the library. President, Edwin A. Alderman, LL.D.

VIRGIN ISLANDS. A group of small islands east of Porto Rico, part of which belong to the British colony, the Leeward Islands (q.v.) and part to the United States. The following information was supplied by the United States Bureau of Foreign and Domestic Commerce. Of the United States group, formerly known as the Danish West Indies, St. Croix, the largest, contains approximately 85 square miles, St. Thomas 30, and St. John 20 square miles. In addition to these there are about 50 smaller islands, most of them unnamed and uninhabited, comprising in all 84,781 acres, of which 69,892 acres are in farms. Because the islands of this archipelago were too numerous to be named individually, Columbus called them the "Virgins" after St. Ursula and her 11,000 virgins when he found the islands on his second voyage of discovery. The Bureau of the Census gave the total population of the Virgin Islands of the United States in 1917 as 26,051, of which 1992 or 7.4 per cent were white, 19,523 or about 80 per cent negroes, and the remainder, 4606, of mixed races. The island of St. Croix contained 14,901 people, St. Thomas 10,191, and St. John 959. The report of the Congressional Commission, January, 1920, stated that the population of Charlotte Amalie on the island of St. Thomas was about 9000, while Christiansted and Frederiksted, on St. Croix, contained respectively about 5000

and 3000 inhabitants; the total population of the islands being about 60 per cent urban and 40 per cent rural. The total number of families on the islands was reported as 9568 and the total number of dwellings 5858.

The trade of the Virgin Islands of the United States with the world was valued at \$4,196,037 in the calendar year 1919, as against \$3,141,775 in 1918, a gain of \$1,054,262, or 33 per cent. Exports showed a gain of \$670,179, from \$1,249,346 in 1918 to \$1,919,525 in 1919. Corresponding imports increased \$384,083, from \$1,892,429 to \$2,276,512. With this increase there was a drop of nearly 50 per cent in the balance of trade against the islands from \$643,083 in 1918 to \$356,987 in 1919. The major portion of this commerce was with the United States, the exports from this country increasing in value \$164,014, from \$1,640,103 to \$1,804,117; and imports from the islands into the States \$455,619, from \$1,137,501 in 1918 to \$1,593,120 in 1919. This is a growth in value of 40 per cent in imports and 10 per cent in exports over 1918. The proportionate increase is even more striking in the trade with foreign countries, imports from which rose 87 per cent, or \$22,069, from \$252,326 in 1918 to \$472,395 in 1919; and corresponding exports \$214,560, or 191 per cent, from \$111,845 to \$326,405. This showing is the more remarkable since the operation of the national prohibition act practically cut off in 1919 the former valuable trade in spirits, wines, and liquors for beverage purposes.

VITAL STATISTICS. The reports of the United States Public Health Service for 1920 contain a report recently completed of Birth Statistics and Infant Mortality for the year 1918. In the birth registration area the number of infants born alive was 1,363,649 or 24.4 per 1000 population. The death rate for the same area was 18.2 per 1000. The death rate for infants under 1 year old was 101 per 1000 live births. These figures are somewhat more unfavorable than those of 1917 in all three classes, especially in the death rate, which was 4.1 per 1000 higher than in 1917. In 1918 the infant mortality was 23 per cent higher in boy babies. The percentage of twin births was a little over 2. The average number of living children per family was 2.9; of all children born, 3.3 per family.

The principal causes of death in the registration area were as follows: influenza and pneumonia caused nearly a third of the total loss of life, equal to over 583 per 100,000 population. Organic disease of the heart destroyed 152.3 per 100,000, tuberculosis 149.1, violence 100, Bright's disease 96.9, malignant tumors 79.8, apoplexy 79.3, diarrhoeal diseases (the great majority in young children), 72.2. These 8 classifications are far more numerous than any others, all being over 70 per 100,000, while no other affection was over 30.

No other considerable statistics of births, deaths, marriages, etc., have been published and generally speaking the number of articles on Vital Statistics is relatively small and the data are of local interest or belated in point of time, while a number are of interest only to the professed statistician. Of those worthy of mention is one by Lublin and Whitney on the cost of tuberculosis. Lublin avails himself of the statistics of the Metropolitan Life Insurance Company and Whitney of those compiled by the National Tuberculosis Association. Tables of the

general expectation of life are contrasted with other tables from which the tuberculous subject was excluded. This method, the authors state, is by no means new. In the insurance material the expectation is reckoned from birth and in the public tables from the age of 20. The average loss in expectancy is computed for the whole community. This loss is equivalent to a loss to each inhabitant of 3½ years for white males, and of 2.6 years for white females. The loss for one year of life is assumed nominally as not less than \$100, and if we reckon that 2½ years of life are cut off from each individual the total loss to the latter would be at least \$250. Now if we multiply by 106,000,000, the supposed population of the United States, we reach the huge total of \$26,500,000,000. This does not include the cost of the illness of actual sufferers from the disease.

Lublin and Baker also publish a study of the mortality of the emigrant from Europe to the States of New York and Pennsylvania. These people are grouped as follows: Austrians (including Hungarians), Russians, Italians, Germans, British (excepting Irish) and Irish. The mortality of the native stock serves as a standard of comparison. The authors admit the incongruity of the idea in some respects; for example, the "Russians" comprise such incongruous material as the Poles who work in the Pennsylvania factories and the Jews of New York's East Side. But some striking figures are brought out: The emigrants have in general a much higher death rate than the natives and than their kin at home. In addition to the great fatal maladies the Pennsylvania immigrant is far more likely to be killed by industrial accidents than the native. The Irish exhibit a peculiar fatality, for in every one of the great mortal ailments they show a notably high death rate and lead all other groups.

The details are of minor interest to the general reader but some deserve mention. The Italian has a relatively low death rate from cancer and heart disease and contrary to the usual view does not have a specially high tuberculosis mortality. He is prone to death from pneumonia and accidents. The Austrians, too, show more immunity to tuberculosis than some of the other groups. The Russian of both types shows a high mortality from cancer and pneumonia. None of the preceding show a startling mortality from the degenerative diseases. The Germans and British seem to show no immunity to any one of the great causes of death and have high rates in tuberculosis, pneumonia, cancer, heart disease and Bright's disease. The same may be said, but even more strongly, of the Irish, who lead the list in all of these ailments.

In the *American Journal of Public Health* for January, 1921, Hemenway contributes an interesting paper on the legal aspect of birth certificates and of the great value of possessing at all times a certified copy. Such possession is indispensable at times to show citizenship, to obtain marriage licenses, to inherit property, to disprove criminal accusations, to establish age for marriage or voting, for eligibility to hold civil or military office, to establish nationality, to travel safely, to claim pensions, prove legitimacy, etc. Without one, a man may be imprisoned as an alien or have his property confiscated. If he marry a girl under legal age he is liable to the charge of rape or abduction; or if falsely accused of

technical assault her birth certificate may show that she had reached the age of consent. Birth certificates may be necessary in collecting insurance claims, damages for personal injuries, proving legality of marriage.

VOLCANOES. During 1920 no great eruptions occurred in the well-known volcanic regions. Vesuvius was rather quiet though continuously active in a minor fashion. In Hawaii Halemauau continued to seethe on a magnificent scale but in the rather reassuring manner which is characteristic of the Hawaiian vents. In the Kau Desert region of Hawaii the great flow there continued to advance intermittently throughout the year. Numerous minor cones and craters were developed in connection with these two grand phenomena. Accompanying the frequent recurrences of activity in Hawaii were numerous earthquakes of minor type considered to be genetically related to the igneous activity.

In Mexico the two great volcanos Popocatepetl and Orizaba have again become active. The renewal of activity was synchronous with the great earthquakes that shook southern Mexico in the early part of the year. The new activity has as yet confined itself to the emission of great clouds of steam. Owing to the uninhabited character of the region immediately around the volcanoes the possibility of a great eruption is looked upon with little concern.

An event of great interest to volcanologists was the publication by C. N. Fenner, of the Geophysical Laboratory, Washington, of the results of his observations in the Valley of Ten Thousand Smokes which has been set aside by the national government as one of the national parks. According to Fenner the great eruption of Katmai in 1912 coated the country for hundreds of square miles with debris. The debris which fell on the valley walls was washed down the valley by the heavy rainfall leaving a residue clinging to the valley floor. The presence of the thousands of fumaroles in the valley Fenner explains by the intrusion of a sheet of lava just below the valley floor. He supports this conclusion by mention of the fact that all activity ceases at a short distance up the sides of the valley. The activity is wholly of a fumarolic character. More than 99 per cent of the emanations is water vapor. The next most common gas is HCl. HF and SO₂ are common constituents also. It is to be noted that the few anhydrous fumaroles are strongly acid, one containing large quantities of SO₂. Locally the surface of the valley is impregnated with HCl condensed from the vapors passing over it. The presence of HF was indicated by large deposits of amorphous silica around acid fumaroles. The presence of hydrofluoric acid was ascertained during the washing of the emanations captured from the fumaroles. The deposition of SiO₂ is believed to be the result of the decomposition of SiF₄ by water vapor at temperatures which have been observed to be above the critical temperature of water (375°C). As Moissan found SiO₂ to volatilize at 1200°C and as there is no evidence of such occurring in relation to these deposits, it is evident that they have not reached such a temperature.

A very curious phenomenon observed was the presence of blue green algae living at the edge of vents whence anomonia compounds were being emitted at a temperature of 100°C. They did not occur near vents from which ammonia compounds were not being evolved.

Numerous other substances have been formed from the emanations, notably sulphur, gypsum, apatite, corundum and orpiment, but in very small quantity.

According to Fenner the top of Katmai was not blown off but fell in. At present a crater several thousand feet in diameter exists, partly occupied by a lake in which rises an imperfect parasitic cone. There is now no evidence of activity within the mountain. This study of Katmai by Fenner is the most fruitful piece of research on volcanic activity of the year.

VOLHYNIA. A government of the former empire of Russia, situated in West Russia, east of Poland and Galicia, and forming part of the new state of Ukraine. Area, 27,699 square miles; pop. Jan. 31, 1915, 4,241,800, the majority of whom are Little Russians. Capital, Zhitomir, with a pre-war population estimated at 96,800.

VOLUNTEERS OF AMERICA. Founded in 1896, this organization conducts Christian, social, and philanthropic work throughout the United States. The organization is similar to the United States army, but the spirit is purely democratic. Reports for 1920 show that there were sixty-one principal homes or institutions where benevolence is being carried on. In connection with these there is a diversity of philanthropic departments, such as employment bureaus, wood-yards, industrial effort, coöperative stores, boys' clubs and trade classes, supplying of coal, distribution of milk and ice, women's sewing classes, reading-rooms, hospital nursing, summer excursions, fresh-air camps, distribution of clothing, providing of food for poor families and wives and children of prisoners. In connection with these homes and institutions during the past year 1,258,952 lodgings were provided, of which number 919,220 were paid for by work or outside employment, and 339,752 given free. Total meals furnished numbered 1,032,034, of which 720,460 were free. There were 115,155 families and individuals assisted and employment was provided for 84,615 persons. The attendance at indoor services was 926,036, while at the open-air services there were 2,654,558 persons, making a total of 3,590,594 persons during the year. In the Volunteer Hospital there were 11,294 day treatments in the wards; in the dispensary there were 12,343 new cases and 22,258 old cases treated, making a total of 34,601 surgical and medical treatments. There were 55,909 lodgings furnished young women in the homes during the year. The Volunteer Prison League aided over 100,000 men and enabled over 15,000 to secure work, who are making good. The work with girls in large cities has been very valuable, girls suddenly finding themselves forced to go to work have been provided for in the Working Girls' Homes. Also many children have been afforded a vacation from the city's streets to go to fresh-air camps in the country. Twenty years ago Mrs. Ballington Booth organized the Prison League which to-day is doing valuable work, not only for the prisoners after they are released, but in introducing reforms inside the prisons themselves. At Christmas and Thanksgiving time the Volunteers attempt to provide dinners

for the poor of the large cities, having distributed in 1920 many thousands of baskets of food.

During the war, the Volunteers rendered valuable service abroad, a summary of which will be found in the *NEW INTERNATIONAL YEAR BOOK* for 1918. The executive offices of the organization are at 34 West 28th Street, New York City. The president is Ballington Booth.

VON SCHRODER, LEOPOLD. See GERMAN LITERATURE.

VORARLBERG. An Alpine province of the former Austro-Hungarian empire, constituting a crownland of Austria, with an area of 1005 square miles and a population (1910) of 145,408 of whom 132,908 were Austrian subjects. The German-speaking element made up 95.36 per cent of the population. Capital, Bregenz.

WAGNER, RICHARD. See MUSIC, *Opera*.

WALES. A division of the United Kingdom, lying west of central England with the Irish Sea on the north and the Bristol Channel on the South. Area, 7466 square miles; pop. (1911) 2,025,202. See GREAT BRITAIN.

WALLACHIA. The central and western division of Rumania with Transylvania and Moldavia on the north, Serbia on the west, Bulgaria on the south and the Dobrudja on the east. Area 29,916 square miles; population Jan. 1, 1913, 4,716,291. The largest city is Bucharest, the capital of Rumania, with a population in 1917, of 308,987.

WANTAGE, HARRIET JONES LOYD, Lady. British peeress, died near Wantage, England, Aug. 9. She was the daughter of Lord Overstone, a millionaire banker, one of the leading financiers of the mid-Victorian period. She married in 1858 Col. Lloyd Lindsay, who was a member of Parliament from 1865 to 1885, when he entered the House of Lords as Lord Wantage. She was active in founding and administering the English Red Cross Society with which she was closely associated during all its early activities as well as during the late war. With her husband she added to the important art collections of the family.

WAR CAMP COMMUNITY SERVICE. This organization was discontinued in 1919, and a new organization, called the Community Service, was organized. During the war, War Camp Community Service did valuable work, and this work is being carried on on a peace basis by the new organization. See COMMUNITY SERVICE; SOCIAL HYGIENE.

WARD, BERNARD. (BISHOP OF BRENTWOOD.) British prelate and writer, died Jan. 21. He was born at Herts, England, Feb. 4, 1857, and was educated at St. Edmund's College, Old Hall, and at Oscott College, Birmingham. In 1882 he was ordained priest by Cardinal Manning and subsequently was master at St. Edmund's and at Oscott. He was celebrated for his prominent part in the Oxford Movement, being known at that time under the nickname of "Ideal" Ward. He became Roman Catholic Canon of Westminster in 1903. Among his writings may be mentioned:

A Commentary on St. Luke's Gospel (1899); *The Dawn of the Catholic Revival* (1909); *The Eve of Catholic Emancipation* (1912); and the *Sequel to Catholic Emancipation* (1915).

WARD, MRS. HUMPHRY. British novelist, died in London, March 24. She was born in 1851 at Hobart in Tasmania, the daughter of Thomas Arnold, who was the second son of Dr. Arnold of Rugby. She was also the niece of Matthew Arnold. In her youth she lived with her family at Oxford where she made the friendship of Mark Pattison, the rector of Lincoln College and formed many other acquaintances among the leaders of political and theological thought as well as in the field of literature. Among those whose influence she felt or with whom she was in some way associated may be mentioned, George Eliot, Taine, Lewes, Jowett, T. H. Green, J. R. Green, and Bishop Stubbs. In 1872, she married Mr. T. Humphry Ward who was then a fellow of Brasenose and she lived with her husband at Oxford until 1880 when they settled in London. Her literary career began with the publication of a novel called *Milly and Olly* which, however, gave no promise of her future success in fiction. She had made a thorough study of Spanish and had served in the University as examiner in Spanish and also had pursued historical studies. The results of her research appeared in many articles that she contributed to the *Dictionary of Christian Biography*. Her great success was won by the novel *Robert Elsmere* in 1888 which was read everywhere by English-speaking people. As a study of religious doubt and a criticism of the orthodox faith, it stirred up hostility, but was admired by the most eminent men of the time. Of her subsequent novels which were very numerous, the most popular were *The History of David Grieve* and *Marcella*. Her concern with religious questions was largely the result of her relations with the philosophical and theological celebrities of the day, showing plainly the influence of such great personalities as Newman, Pusey, Huxley, Darwin, Ruskin, Kingsley, Green, Matthew Arnold and others. The mental life of the hero of *Robert Elsmere* was perhaps suggested by the experience of her own father who was the victim of religious doubts and had more than once changed his faith. The philosophical and religious disputes which were going on during her youth left a permanent stamp upon her writings and the spirit of her earlier work was that of a gradual liberation through free inquiry from the restrictions of the older faith. She applied to religion the radicalism of her time and her attitude may be summed up in the words of her character in *Helbeck of Bannisdale* who criticized a certain dogma by saying "It may be Christian, but it is not sense." Public service, especially for the improvement of the condition of the poor and of the working classes absorbed even more of her attention than literature during the latter part of her life. She was interested in innumerable plans for social reform and took an active part in the most important movements of her time. She was opposed, however, to woman suffrage and led the fight against it; but she acknowledged her defeat with a good grace and accepted the appointment as one of the first women magistrates. Among other benevolent movements in which she took a prominent part was the establishment of children's play centres. She won gratitude in England and in America for her work during the war.

Among other writings of Mrs. Ward may be mentioned the novels *Sir George Treasady* (1896); *Eleanor* (1900, subsequently dramatized); *Lady Rose's Daughter* (1903); *The Marriage of William Ashe* (1905); *Fenwick's Career* (1906); *Diana Mallory* (1908); *The Case of Richard Meynell* (1911); *The Coryston Family* (1913); *Delia Blanchflower* (1914); *Lady Connie* (1916). She also wrote a great variety of articles on political and other topics for the magazines. Mrs. Humphry Ward's work was admired by critics rather for its description of contemporary social and political conditions than for its literary qualities. It showed evidence of keen observation and wide reading; but it did not possess the finer literary characteristics of the best novels of her time. She enjoyed a great reputation among her cultivated contemporaries, but she never attained any marked individuality of expression, and the element of style as it is found in the great Victorians of her time was completely lacking.

WAR OF THE NATIONS. SUMMARY. Before discussing in detail the various situations and events growing out of the war, the main features of the year may be briefly outlined as follows: After the completion of the Treaty in 1919, the Peace Conference continued its session having to deal with a number of serious questions including those of the Adriatic and Fiume, Albania, Thrace, Hungary, Turkey, etc. It finally closed its sessions January 21, having provided as permanent bodies to deal with these other problems a council of ambassadors and a council of premiers. The former was to control the execution of the peace treaties and to deal with ordinary questions in respect to the peace, while the latter was to consider all larger questions of international policy and to formulate plans in regard to urgent matters of importance. The council of premiers came to be better known under the title of Supreme Council, and is so termed throughout this article. Formal peace with Germany was concluded January 10, with the exchange of the ratifications of the Treaty of Versailles on the part of Germany on the one hand and representatives of fourteen Allied and Associated Powers, namely, France, Great Britain, Italy, Japan, Belgium, Bolivia, Brazil, Guatemala, Panama, Peru, Poland, Siam, Czechoslovakia and Uruguay. A protocol was signed at the same time embodying Germany's agreement to turn over to the Allies in reparation for the sinking of the German ships at Scapa Flow of 275,000 tons of maritime equipment, including floating docks, dredges, etc.

In the first part of the year attention was centered on the meetings at London, Boulogne, Hythe, San Remo, Brussels and Spa. The outstanding feature of all international adjustments during the year was the failure of the United States to ratify the treaties or to join the League of Nations. The practical result of this was to throw additional responsibility on the other powers concerned for the working out of the problems of reconstruction. After the ratification of The Treaty of Versailles, Great Britain at once resumed diplomatic relations with Germany. The degree to which Germany should be admitted into the councils of the Powers was thenceforth a subject of discussion among the former Allies and in general France opposed this policy while Great Britain and Italy favored it. Among the early events of

1920 may be mentioned the handing of the city of Danzig over to the Allied powers; the placing of the Saar Valley under the administration of a commission appointed by the League of Nations; the carrying out of the plebiscite in North Schleswig in February and March (see DENMARK); the placing of the other districts subject to plebiscite, Allenstein, Marienwerder and Upper Silesia, under the control of inter-allied commissions; and especially the difficulties occasioned by the Polish situation. As soon as the territorial clauses of the Treaty came into force, Poland assumed sovereignty over a large area in the east of Germany. The attitude of Poland from that time on gave great concern to public opinion in certain of the Allied countries, especially Great Britain and the United States, while in France the most extreme claims of Poland were in general supported. The course pursued by Poland and its results are discussed in paragraphs below and under POLAND, RUSSIA, LITHUANIA, etc. Early in the year also arose the question of the war criminals. The submission of the list of criminals whose surrender was demanded by the Allies caused great indignation in Germany and the Allies agreed to radical modifications of the demands. As to the surrender of the German emperor, it was found impossible to carry out the clauses of the Treaty owing to the attitude of the Dutch who took their stand strictly on the principles of international law. The two chief points of discussion in respect to the execution of the Treaty with Germany were disarmament and reparations, which were continuously debated in all the countries concerned down to the last day of the year. In February the period within which the German army was to be reduced to 150,000 men was extended from March 31 to July 10. In March occurred the Knapp counter-revolution on the part of the reactionary elements in Germany (see GERMANY, *History*), which although overthrown diminished the authority of the Ebert government, and especially that of the minister of defense, Noske. The authorities found it necessary to reinforce troops in the Ruhr district where the Communists had brought about a situation of virtual civil war. As this was contrary to the treaty they were obliged to ask the permission of the Allies, but they acted before the permission was granted. Then occurred the French occupation of the Ruhr district (see below and under GERMANY, *History*). At the San Remo conference in April it was agreed that the French troops should be withdrawn as soon as the German troops in the Ruhr Valley had been reduced to the required limit. At the conference of Spa in July, Germans were for the first time admitted to the discussions. As a result of the various conferences, the Allies agreed to extend further the period for the reduction of the German army to January 1.

The Austrian treaty was formally ratified July 16, 1920. The serious aspect of the situation in Austria was the movement of union with Germany, (see AUSTRIA). The Hungarian treaty was signed June 4 in Hungary. The main features of the year in Hungary were the continued success of the reactionary parties under the government of Admiral Horthy and the bad relations with the neighboring states chiefly on account of the race questions. The Adriatic problem and especially the Fiume

difficulty continued to trouble the statesmen almost down to the end of the year. Discussions of the Turkish treaty began in Paris in January and continued in London in February. The Supreme Council announced February 16 its decision that the Sultan's government should remain at Constantinople. The leading fact in the Turkish situation was the attitude of the Nationalist Turks who under Mustapha Kemal Pasha had set up an independent government at Angora and who practically ruled the country, the Sultan's authority being without force in Anatolia. (See below and under **TURKEY**.) The terms of the treaty were settled at the conference of San Remo in April and the treaty was given to the Turkish delegates, May 1, to be signed within a month. At the conference of San Remo also, it was decided that France should have the mandate for Syria and Great Britain for Mesopotamia and Palestine, thus rejecting the claims of Emir Feisal, the Arab nationalist. The relation of Greece to the Allies was fundamentally changed toward the end of the year by the downfall of M. Venizelos and the recall of the former king Constantine. As to Russia, the interventionist policy had been abandoned but there was still great difference of opinion among certain elements in each of the countries of the Allies and between France on the one hand and Great Britain and Italy on the other. The early part of the year saw the rise and fall of a new anti-Bolshevist leader, General Wrangel (see **RUSSIA**), but the most important contest of the Bolsheviks was with Poland who after being threatened with a conquest suddenly regained the upper hand, drove out the invaders and formed a peace satisfactory to her own interests. (See below and also the article **POLAND**.) Other aspects of the Bolshevik danger were the Bolshevik advance in the east and their success as against Armenia and the other newly formed border republics of Georgia and Azerbaijan; and the fear on the part of Great Britain of a Bolshevik advance toward India and of Bolshevik propaganda among the Indian natives. The absorbing topic of the year in connection with the Soviet government was the question of resumption of trade relations between it and the countries of the Allies. The attitude of governments and parties on the subject is discussed below and in the articles on the countries concerned.

The League of the Nations was formed immediately after the ratification of the treaty and the first meeting was held in Paris January 16. This was followed by meetings in Paris, Brussels, and San Sebastian, in the course of which the League was fully organized. In November and December the first session of the Assembly of the League was held at Geneva. The activities of the League during the year are described in the paragraphs immediately following.

LEAGUE OF NATIONS: FIRST SIX MONTHS. The executive council of the League of Nations consisting of nine representatives, one each from the five great and four small Powers, (see article **LEAGUE OF NATIONS**) held six meetings down to the middle of June. At the first meeting, which as noted above was held at Paris, January 16, the first business transacted was the appointment of the commission of the Saar Basin frontier. The second meeting was held in London, February 11. The rules of procedure of the council was adopted; Switzerland

was admitted; the Saar Basin government commission was appointed; Sir Reginald Tower was named High Commissioner of Danzig; the League assumed the charge of protecting racial minorities in Poland; the following institutes were planned: Permanent Court of International Justice; International Health Bureau; machinery for insuring freedom of communication and transit; and a call was issued for the meeting of an International Finance Conference.

The third meeting was held in Paris, March 13. Its main business was the approval of plans for sending a League commission of inquiry into Russia and for measures of prevention against typhus in Poland. The sending of a commission to Russia was accepted in accordance with Mr. Balfour's proposals. A telegram was sent to the Soviet government saying that the League had decided to send a commission to Russia to make impartial inquiries and asking the Soviet authorities to take measures to assure its complete liberty and safety. At first this met with no response and it was reported in April that the Soviet government did not approve the sending of such a commission, but later the reply was received. This accepted the proposal in substance, but refused to receive as delegates, the representatives of any nations aiding or encouraging the Poles or Ukrainians in their campaign against Soviet Russia. The Council drafted a reply in which the answer of the Soviet government was interpreted as a refusal and which urged that government to reconsider its decision.

The fourth session was held also at Paris on April 9. It received from the Supreme Council a request that the League should take a mandate for Armenia. The Council of the League decided that acceptance of a mandate for the minorities in the Turkish Empire was within its province but should be postponed until the Turkish treaty was drafted: and that it would assume only a supervision of Armenia, not having the necessary military and financial means of administering the country directly. Meanwhile other countries had voted to join the League. Persia had accepted the invitation to become a member early in the year. Holland voted to join on February 20; Sweden, March 4; Norway, March 5; and Switzerland, March 5, subject to a referendum later. By April 6th, the neutral countries of South and Central America including Argentina, Paraguay, Chile, Salvador and Venezuela, had also joined.

The fifth meeting was held in Rome, May 14-16. Thirty-six states were represented and the following subjects were discussed: Plans for the accession of new states, the convoking of the assembly, the organization of the permanent secretariat, the framing of the budget and its apportionment, the formation of the Permanent Armament Commission, the appointment of the International Statistics Commission, and action on various matters including transportation and communications, central European relief, typhus in Poland, repatriation of ex-enemy prisoners in Siberia, discussion of the report of the Washington Labor Conference, and registration and publication of new treaties between members of the League. Among the other subjects discussed was the means of securing Germany's fulfillment of article 213 of the treaty, according to which she was to submit to the investigation of all her military provisions by the League. The council accepted the principle that it should

hold itself responsible for Germany's fulfillment. It was decided that the first Assembly of the League should be called by President Wilson and meet at Geneva in the autumn.

The sixth meeting was held in London, June 14, being called especially for the purpose of hearing Persia's appeal against Bolshevik aggression. This was regarded by many as the first great test case. In the latter part of May, the Persian foreign minister had protested to the League against the Bolshevik occupation of Enzeli on the Caspian sea. In the French press it was argued that owing to the British protectorate of Persia it was England's duty and not that of the League to attend to this matter and in certain French quarters it was charged that Lloyd George was trying to secure from the League a recognition of the Anglo-Persian treaty or of the Soviet government or both. This was the spirit of articles in the French *Temps* and it was in line with the policy of the leading French journals throughout the year in all matters pertaining to British foreign affairs.

In the meanwhile measures had been taken for the organization of a permanent Court of International Justice in accordance with the decision of the meeting of February 11.

An organizing committee had been appointed at that meeting consisting of the following countries: United States, Argentina, Belgium, Brazil, France, Great Britain, Holland, Italy, Jugo-Slavia, Japan, Norway, Spain. The representative of the United States was Mr. Elihu Root. Switzerland confirmed her decision to enter the League by her referendum May 15-16. Applications for membership were made by Iceland, San Marino, Luxemburg, and the new republic of Georgia. At the end of May the new states of Esthonia, Ukraina, and Finland consented to join. The republic of Haiti joined on June 2 and on that date the only states eligible for admission who were not members were the United States, China, Costa Rica, and Honduras. As to admission of enemy states, it was uncertain, but it had been given out that Germany would be allowed representation at the International Financial Conference to be held in Brussels in July. It was reported that a League of Nations Union in Germany had been organized and had a membership in May of more than nine millions. The decisions of the League indicated a line of policy which had a most important bearing on the old question of executing the treaty and consequently on the question of America's entry into the League. This was its tendency to cut loose from the policies of the Peace Conference. Friends of the League argued that it was the duty of all men to support it even if they believed that the Treaty was unjust and inapplicable. A secretariat had been organized to serve as a permanent trained international staff for gathering information, preparing plans, etc. Early in the year it was in operation having a membership of 100 men and headquarters in London. It was divided into sections according to the nature of its work as follows: Legal; mandates; international; health; transit; international bureaus; political administrative commissions; economic; public information; financial. The work of this body showed that it was adverse to the principle that the League should be the agency for enforcing the Treaty and in all its plans and

in the nature of its machinery it proceeded upon that theory. According to this view the League could not assume responsibility for such matters as the Reparation Commission, the trial of war criminals or the establishment of title in conquered countries and it had also a tendency to evade other actions for the enforcement of the treaty. M. Raymond Poincaré who was expounding in detail during the last months of the year, the French point of view in respect to the Treaty made a similar comment upon the work of the League, saying that at the instance of the President, M. Bourgeois, the League had dismissed from its programme everything that pertained to the treaty of peace and that the conferences therefore had turned out to be simply a great Court of Miracles where nations came to display their infirmities and sufferings.

Other features of the League's work during the year were measures for the adjustment of differences between Finland and Sweden over the Aland Islands; arrangement for repatriation of war prisoners in Silesia; intervention on behalf of peace between Lithuania and Poland; and organization of the financial conference at Brussels, and the execution of measures proposed by it; measures of general humanitarianism such as the campaign against typhus, above mentioned, the control of the opium trade, and the measures taken against the white slave traffic; attempts to secure mediation in Armenia and approaches by this end to the United States, Brazil and Spain; rejection of the German demand for another plebiscite in Eupen and Malmédy, and the definite assignment of these districts to Belgium; creation of a permanent committee of mandates for the administration of the former German colonies; acceptance of the responsibility for the protection of racial minorities; registration of 69 treaties, in conformity with the stipulation of the Treaty of Versailles. Some of the more important of these are discussed in the following paragraphs.

THE LEAGUE'S POLICY. Illustrations of the League's course in dealing with international questions were afforded at important sessions in Paris in October. Among the questions presented was the administration of the basin of the Saar. The report on this subject indicated that the status of functionaries had been worked out in a liberal and democratic spirit and that the government commission was effectively at work. According to the French this was a vindication of their course and a reply to the German attempt to stir up an agitation against the French in the Saar. The League of Nations approved without reservation the French administration there.

Another feature of the session was the assignment of Eupen and Malmédy to Belgium pursuant to Article XXXIV of the Treaty. The Council decided that since out of 63,000 inhabitants there were only 271 protests against the return of this region to Belgium and since the popular will had been carried out in spirit of the Treaty the session was justified. The Council definitely decided in favor of the transfer of this district to Belgium.

Another important problem was that of the Aland Islands. This, unlike the other questions, did not pertain merely to the execution of the Treaty but to the settlement of a dispute between sovereign nations. Thus the League of Nations was called upon to deal with the sort of

question for the solution of which it had been created. Finland maintained that the Åland question was not international but purely a Finnish question and therefore outside of the jurisdiction of the League. The Council, however, declared that it was competent to deal with it. The matter was left to a future decision, special investigators having been appointed.

Still more important was the conflict between Poland and Lithuania. The latter had refused to recognize as binding the decision of the Supreme Council of Dec. 8, 1919, fixing the eastern limits of Poland and claimed a different line, namely that traced in accordance with the treaty of July 12, 1920 with the Russian Soviet government. Here again the Council did not at once go into the question but awaited the result of certain direct negotiations that were going on between the contestants. Nevertheless, it prevailed upon the two states to accept provisionally a line between the zones of occupation which the troops of neither power should overstep. The essential point in the question was the fact that a part of Lithuanian territory, namely, the region of Grodno was still occupied by the Bolshevik troops.

The future status of Armenia was discussed in the meeting of October 21. According to the spirit of the Peace Conference and also of the Supreme Council of the Allies, Armenia was to be directed in the first stages of its independence by some Power acting as mandatory. The burden of the mandate was so serious that no state was willing to undertake it and the Supreme Council, March 12, proposed to the League of Nations that it should cooperate with it in the protection of the future state. It decided against this on April 10, as noted above. In its reply to the Supreme Council, April 11, the League said that the entire civilized world must support the complete emancipation of Armenia and that to this end it was necessary for some civilized state to accept a mandate under the protection of the League. Armenia would be satisfied with this solution which, of course, required that aid be given to her in the freeing of the country and the guarding of its frontiers. Financial assistance was also necessary. Under the plan proposed by the League the burden of these measures would be divided among the different states.

On April 26 the Supreme Council informed the Council of the League that it had appealed to President Wilson. On May 31 it was learned that the United States Senate had refused the mandate. Meanwhile Armenia had become an independent state by virtue of the Treaty of Sèvres, August 6, 1919, and had applied for admission to the League. The Council of the League came to no further decision in respect to Armenia and it was proposed that the question of financial aid be submitted to the approaching Assembly of the League, fixed for November 15.

As to the policy of the League it had been effective on its administrative side and as above indicated the results were considerable. Its accomplishments during the first year of its existence included, first its organization. This comprised a secretariat of three hundred officials, two hundred of them being of a clerical or subordinate nature and the remaining hundred being responsible authorities. Three annexes were added to it organized on the model of the International Bureau of Labor and comprising

finance, hygiene and transit. Each of these during the interval had held its first meeting. The Bureau of International Labor in the absence of a strong central organization of the League assumed an independent existence and proceeded to expend on its activities an amount equaling two-thirds of all other expenses of the League, the League being responsible for its budget. The expenditures of the League exceeded anticipation and at the session of the Council at San Sebastian it was brought out that the League subsisted chiefly on bank loans. As to the other measures undertaken by the League before the Geneva meeting, the results were in the main negative, that is to say, the questions taken up were abandoned or the policies approved were left unexecuted. There was one exception to this, and that was the question of the Åland Islands. The proposal to send a mission of inquiry into Russia had failed on account of the refusal of the Soviets to receive it. The League was unable to take any steps toward an active policy in respect to Armenia. When the Persians demanded aid against the Bolsheviks, the League went no further than to discuss the subject with the appellants. And although the League arbitrated the Polish-Lithuanian difference, it had no means of applying its decision. The League also encountered a check in its social and philanthropic activities. The return of the prisoners of war, for example, was not accomplished except for a very small percentage; the organization of the campaign against typhus in Poland had reached only the point of an appeal for funds; and the Brussels conference called to discover the causes of the economic world crisis and to recommend remedies had not done more than to proclaim a number of general truths. In the domain of practical and immediate policies of less importance the League had shown successful results. For example, it has intervened in the question of international transit and the regulation of passports with the result that many difficulties and some causes of strike throughout the world were removed. It reduced the so-called white slave traffic and it secured better means of protecting public health. Down to the time of the Geneva Assembly, the League had shown no ability to carry out the principal political aim for which it had been founded. In regard to a certain class of matters destined to come before it, it seemed very likely to take useful action—such matters for example as the unification of legislation in the different countries in respect to patents, commercial and literary property, conditions of naturalization, frauds in the sale of food, etc. It was felt after the American elections and the affirmation of Mr. Harding that the United States could not enter into a league which had the power to bind its members in the exercise of force without consulting them, that the tendency would be not to extend the powers of the League, but to reduce them, for it was believed that the League could not endure successfully unless it obtained the support of America. As to one of the chief questions before it for example, that of general disarmament, it remained in suspense because the United States was not represented.

THE GENEVA ASSEMBLY. On November 15, the Assembly of the League of the Nations opened its sessions at Geneva with representatives from forty-one nations. M. Motta, president of the Swiss delegation, delivered the opening address

M. Paul Hymans, head of the Belgian delegations, was elected permanent president. In the course of the speeches frequent references were made to President Wilson, who was described as the "spiritual father of the League," and much regret was expressed for the absence of the United States.

The question of publicity for the proceedings of the commissions came up soon after the meeting of the Assembly. There were to be six of these commissions to which would be referred definite questions including questions of justice, finance, mandates, reduction of armaments, etc. A motion was made by Lord Robert Cecil that all meetings of the commissions should be made public unless it could be shown that there were good reasons to the contrary. The motion was defeated, but it was proposed that a report should be made of the proceedings. The most important event in the earlier sessions was the resolution to send an armed force into Lithuania to maintain order during the plebiscite which was to be held in Vilna and the surrounding region. As is recounted elsewhere the Polish general, Zeligowski, seized Vilna after the Bolsheviks had evacuated. Thereupon, Lithuania protested to the League and the Council of the League agreed to a plebiscite. The sending of troops to maintain order is authorized by Article XI of the Covenant, whereby it was provided that in danger of war, the League might take such action as it saw fit. The matter was significant in its bearing on the question of maintaining peace in Europe by armed forces. Within the first few sessions of the Assembly it was made plain that Germany was not to be a member. This was attributed to her failure to apply. It was said that had she applied for membership, she would have received the necessary two-thirds majority. Her motive in not applying appeared to be the fear that in so doing she would increase the feeling against her and delay the appeasement of Europe, in view of the French opposition to her entry. The session of the Assembly on November 22 was marked by an important discussion of the Armenian question, in which France and Great Britain took the leading parts. These two Powers had followed a conflicting policy in Asia Minor (see below), the French favoring negotiations with the Nationalist Turkish leader, Mustapha Kemal, on behalf of Armenia, while the British, so long as Venizelos was in power had wished to suppress Kemal's activities. Upon the downfall of Venizelos, the French, assuming that the Greeks would no longer play an aggressive part in Asia Minor, believed the time had come for approaching Kemal, and this would lead naturally to the revision of the treaty with Turkey. Lord Robert Cecil brought on the debate by the introduction of a resolution to the effect that a commission of six members be chosen to consider what steps should be taken toward ending the war between Kemal and the Armenians. In the discussion that followed, the British delegate pointed out the difficulties in the way, saying Kemal was merely an outlaw and beyond the reach of the power of the League. The French delegate demanded that the League should do something practical and introduced an alternative resolution that the Council of the League should meet at once and select a Power to undertake arbitration between Kemal and

the Armenians. In the course of this debate, reference was several times made to the League's lack of military power and regret was expressed amidst the applause of the whole body that the League had not been backed up by force. M. Viviani evidently wishing to put his country on record as not responsible for the League's lack of power to enforce its decisions, said that the French peace delegation headed by Senator Bourgeois went to the Hotel Crillon during the Peace Conference and asked President Wilson that the League be given an army and a permanent general staff. If France had been heard, he said, the League would not be in a position of impotence and could send an armed force to save Armenia.

A request was addressed to President Wilson by the president of the Council of the League that he should use his good offices in mediation for the purpose of ending hostilities in Armenia and it was accepted by President Wilson, November 30. He said that while the invitation to accept the mandate for Armenia had been rejected and while he was not authorized to offer any military aid for the relief of Armenia, he was willing to mediate personally through a representative in order to bring peace in Armenia. Upon President Wilson's acceptance, the names of the Prime Minister of Spain, Señor Dato and the Foreign Minister of Brazil, Senhor Marquez, were presented to the Council as associates of President Wilson in the mediation. The Council voted in favor of them and all three arbitrators were subsequently notified.

The Assembly decided on November 26 to give the control of the mandate commission to the non-mandatory Powers. This was opposed by British delegates. The commission of the League Assembly having to do with mandates appointed a permanent mandate committee of nine members, five of them being from the non-mandate holding states. This mandate committee was to receive reports from states holding mandates and transmit them to the Council which in turn would submit them to the Assembly. The committee was to have the power of hearing complaints and to give opinions which, however, would not be binding.

At the beginning of December the committee on the admission of new states unanimously decided that Article X of the Covenant of the League did not guarantee the territorial integrity of any member of the League and that all it did was to condemn external aggression on the territorial integrity and political independence of a member. The decision was of importance in view of the vast amount of discussion in the United States based on the contrary assumption.

On December 15, the Assembly decided to admit Austria as a member of the League. She was the first of the Central Powers to be admitted. On the same day the Assembly chose the four elective members of the Council: Spain, Brazil, Belgium and China. On December 16, the following states were admitted: Belgium, Costa Rica, Finland, and Luxemburg, bringing the number of members to forty-six.

At the session of December 14, the Assembly voted to establish an international commission which should provide financial aid to the European nations whose credit had been destroyed or diminished by the war. A plan had been elaborated during several months and was put

into final shape by the economic section appointed early in December. It was provided that nations desiring financial credit should notify the commission what assets they possessed, that the commission should then estimate their value and authorize the governments in question to issue gold bonds. It was understood that the plan had received the approval of the leading European bankers. The text of the draft approved by the Council was in part as follows:

"The government of a country desiring to participate shall notify the commission what specific assets it proposes to assign as security for commercial credits to be granted by the nationals of exporting countries. The commission, after an examination of these assets, shall determine the gold value of the credit which it would approve against the security of these assets. The participating Government will then be authorized to issue bonds to a gold value fixed by the commission.

"The assigned assets are to be administered by the participating Government or by the commission as a majority of the League of Nations may determine on the proposal of the commission. Nevertheless, in cases where the administration of assigned assets is by the participating Government, the commission at any time may—and in case of default shall—require the participating Government to transfer the administration of the assets to itself. The participating Governments have the right of appeal to the Council against this requirement, and the decision of the Council shall be binding."

"The countries exposed by the weakness of their credit to onerous conditions and exacting demands will thus secure an impartial tribunal to protect them. They will find in it support when dealing with creditors and will be relieved of any fear of unfair political pressure, which would not, as in the case of debt councils, threaten to encroach on their sovereign rights. These sovereign rights would remain under the protection of the Council of the League. Being thus able without misgiving to offer to the lenders adequate guarantees, they should be in a position to borrow on more reasonable terms than would otherwise be the case."

The Assembly closed its sessions on the evening of December 18. The last session was the occasion of some sharp discussion in respect to the powers of the Council. Lord Robert Cecil and Mr. Balfour, the English delegates took opposing ground as to the policy of the League in respect to mandates and as to the relation between the Council and the League. There was much criticism, especially on the part of the representatives of the smaller nations, of the wide powers assumed by the Council. It was the controlling authority in nearly every matter, except the admission of members and the appropriation of money. A resolution had been introduced declaring that the states holding mandates should not exploit the territories concerned or raise troops in them. Mr. Balfour contended that the Council retained the entire freedom of action in this respect. There was also much objection to the secrecy of its proceedings. Lord Cecil recommended that the great Powers should make their policy in respect to mandates known. He consistently demanded publicity. He persisted in this demand believing that the time of the old secret diplomacy had passed. Mr. Balfour declared that the Council was the responsible body under the Covenant and that its members could not admit any restriction on its freedom of action. This issue had divided the Assembly during its entire session. It was charged that the great Powers were simply carrying out selfish national policies in the manner of the old diplomacy. The refusal to publish their proceedings gave offence to a large number of members.

INTERNATIONAL COURT OF JUSTICE. In October the secretary of the League of Nations published the plan for the permanent International Court of Justice, as developed by the committee of

jurists in sessions held at The Hague, June 16–July 24th. The chief interest of the plan was its manner of solving the problem which had caused the failure in 1907, namely, the question of the composition of the court. According to the plan the judges of the court were to be elected by the council and the Assembly of the League from a list of names designated by the national groups of the permanent court of arbitration instituted at The Hague by the conferences of 1899 and 1907. Its permanence was insured by the requirement that it should hold a session each year and, at the option of its president, might be convoked in extraordinary session when circumstances required. The powers of the court were indicated by the following provisions. In a difference arising between the states which cannot be resolved through diplomatic channels and which does not pertain to another jurisdiction, the complainant may submit it to the court of international justice. The court has jurisdiction over first, the interpretation of the Treaty; second, all questions of international legislation; third, any violation of international obligations; fourth, the nature and extent of the reparation for such violation; fifth, the interpretation of sentences pronounced by the court. It also would take cognizance of all differences of any kind that might be submitted to it as the result of a general agreement or a specific understanding between the parties concerned. If a contest arose between the parties in regard to the competence of the court in respect to a difference between them the court was to decide. It was also to give its advice in respect to any international question even if it did not have relation to a difference between the nations. The language of the court was to be French although another language might be authorized at the request of the parties in litigation. The committee of the League's plan was presented to the Assembly at Geneva, December 13, and unanimously adopted. It differed from the plan of Mr. Root and his associates in some important particulars. For example, the committee of the League in conformity with the decision of the Council at Brussels believed it impossible to secure the consent of the requisite number of League members to a plan which permitted an offended nation to cite another nation before the Court. This provision was replaced by one which gave the nations the right to consent or refuse obligatory arbitration.

SAAR BASIN. The commission of the Saar Basin was appointed by the Council of the League February 13, and assumed its duties February 26. Its president was M. Rault of France, other members were two representatives of Belgium, one of Denmark, and one of Canada. The Saar Basin, it will be remembered, comprises the mining region which for fifteen years under the terms of the Treaty was to be exploited in the interest of France for the payment of the damage done to her industrial regions. The function of the governing commission was to make sure that the new arrangement caused no unnecessary friction with the natives. It announced that officials would thenceforth be chosen, so far as possible, from among the population and no longer be appointed by the Prussian, Bavarian, or German governments, and that above all, the administration of justice was to be in the hands of the natives. Religious freedom was assured and provisions for the material welfare of the inhabitants promised. Subsequent conferences

were held with representatives of the natives with a view to a policy suited to their interests and wishes, and a programme was finally laid down embodying among other points the immediate end of military rule, the prompt insuring of food supplies, the freeing of travel from incumbrances, the removal of the censorship on letters, and the granting of freedom of the press and of assembly and association as soon as possible.

GERMAN WAR CRIMINALS. On February 7, the Supreme Council demanded of the German government the extradition of 890 German subjects accused of crime in connection with the war. The main part of this list was made up of names presented by France and Belgium. Great Britain listed ninety-seven; Poland, fifty-one; Rumania, forty-one; Italy, twenty-nine; and Jugo-Slavia, four; while all the rest were almost evenly divided between France and Belgium. Neither Japan, nor the United States asked for any extraditions. Here, as in the case of the German ex-emperor, the Allies completely backed down and after some hesitation accepted the German government's proposal of January 5, that a German federal court should try the accused at Leipzig. In March, forty-six names were presented by the Allied justice committee, being selected from those against whom the evidence seemed the strongest. The Allies were to have the right to order a re-trial or to re-try the cases themselves if they disagreed with the verdict. The subject was debated in the German parliament and in the course of the discussion it was made known that the government had prepared a list of war criminals among the Allies, but had decided not to publish the names.

THE EXTRADITION OF THE EX-KAISER. On January 15, the Supreme Council demanded of the Netherlands that the former Kaiser should be surrendered for trial in accordance with the Treaty. The Dutch government refused on the principle of the national law of asylum for political fugitives. The Council again applied to the Dutch government, February 14, giving it to be understood, however, that the Allies would not insist upon the actual surrender of the ex-emperor, provided that the Dutch government would intern him and be responsible for his acts. The Dutch government replied March 5, that it would take the necessary means of preventing the ex-emperor from endangering the peace of the world. This proposal was accepted by the Powers on March 31.

SAN REMO CONFERENCE. Several important meetings of the Supreme Council took place during the year. The first of these was the conference at San Remo, April 18. Here the main feature was the manifest division in the policy of the Allies. The deviation between French and British aims was now evident. French troops had occupied German towns to the east of Maience in order to insure the withdrawal of German troops from the Ruhr district. There was a general feeling in France among political leaders that London did not mean to enforce the Treaty and there had been many notes interchanged between the two governments before the conference met. The French insisted upon strict enforcement of the Treaty; the Italians favored revision; and the British pursued a policy of adaptation to the changing needs. It was decided as noted above that

French troops should be withdrawn from the Ruhr Valley as soon as the German forces there had been reduced to the required limit. After a warm discussion the conference agreed upon a note to Germany insisting upon disarmament and the execution of the Treaty, but it denied any intention to annex German territory and invited Germany to meet the delegates of the Allies at the conference which was to be held at Spa. Other questions before the conference were those of the Turkish settlement and the Russian and Adriatic problems. In regard to the Turkish settlement, the conference agreed upon the principles which were embodied in the treaty with Turkey described in another paragraph. It agreed also that Great Britain should be the mandatory power for Mesopotamia and Palestine and France for Syria, and it offered the Armenian mandate to the United States, after the League of Nations had declared that it would be unable to accept it. It promised the Zionists that civil rule should replace the military administration in Palestine. In regard to the Russian question, it instructed the executive of the Supreme Economic Council to enter into negotiations with the Soviet delegate M. Krassin in respect to commercial relations. It decided that the Adriatic question should be left to the two nations concerned in the dispute.

So far as the area of her acquisitions was concerned, Great Britain was far in the lead of all the others, having added a new empire to her possessions, while France and Italy were confined to the coast. The British control extended over western Asia including all the country between Cairo and Calcutta and between the Caspian Sea and the Persian Gulf, not to mention the fact that she was in possession of Constantinople. This was undoubtedly the greatest change in favor of one Power in that part of the world since it was overrun by the Ottoman Turks when they built up their empire. The point is important in view of the Anglophobia manifest in France, in certain quarters in the United States, and throughout many countries, and the common assertion that Great Britain had gained the lion's share in the spoils of the war. Other territories whose status had to be determined were Armenia and Anatolia. While the Armenians were scattered over the vast region extending from the Black Sea to the Mediterranean and from Sivas in Anatolia to Kars in what had been Russian land till the revolution, they constituted only a minority in the greater part of this region; and it did not seem practical to try and secure Armenian supremacy over any such enormous region.

The decision to invite the Germans to meet the Allied representatives at Spa caused much discussion. It was argued that peace could not be restored until Germany as well as Russia was brought into the concert of nations again. It was agreed at San Remo that the Treaty should be enforced but that this should be done in a spirit of fairness and for the purpose of restoration. It was important that Germany should know how much she was to pay and this was important also for France and Belgium. But there was not a strong enough government in Germany to carry out a plan for the payment of the reparations. Throughout the country there was a defiant or evasive spirit and a tendency to terrify the Allies by threats of Bolshevism or to soften them by appeals to sympathy. Little

was heard in 1920 of demands that Germany should confess her guilt, surrender her war criminals, or make a definite renunciation of her old policies—that is to say these matters were not discussed among practical public men though they figured conspicuously enough in the writings of journalists and literary men. The conference of Spa was looked forward to as a step toward reconciliation and reconstruction.

HYTHE CONFERENCES. The second conference of the prime ministers was held at Hythe, England, May 15. Its object was to draw up a plan for a conference that should be held at Spa, Belgium, to which the German Chancellor would be invited. Its general conclusions were: That the Treaty should be enforced in all respects, especially its disarmament provisions; that a lump sum should be fixed for the German reparation by experts who would also determine the method of payment; that the payment of Allied debts to Great Britain should be dependent on the payment by Germany of her indemnity. This agreement in respect to fixing definitely the amount to be paid by Germany was reached only after a long contest in which the French prime minister, M. Millerand had stood out against it.

Another conference was held in Hythe June 20 attended by the French, British and Greek prime ministers, for the discussion of the Turkish question, and decided to give Greece a free hand in dealing with the Turkish Nationalists. It was merely preliminary, however, to the Boulogne meeting on the following day.

BOULOGNE CONFERENCE. A conference was held June 21 at Boulogne attended by France, Great Britain, Greece, Italy, Japan and Belgium. Its main result was an agreement to approve the war against the Turkish Nationalists. The question of the German indemnity gave rise to a long discussion, but without definite result except that it was decided to turn the matter over for settlement to a financial conference to meet at Brussels, July 2.

SPA CONFERENCE. It was agreed at the conference of Spa between the Allied and German representatives that the monthly delivery required from the Germans should be reduced from 3,500,000 to 2,000,000 tons. On the one hand advances were to be made to Germany in proportion to her deliveries in order that she might feed her miners; on the other hand the Ruhr district and other coal basins were to be occupied for three months if the promised coal were not received.

GERMAN DISARMAMENT. As noted in the preceding YEAR BOOK there were repeated charges that Germany was failing to execute the terms of the Treaty in respect to disarmament and was under various pretexts maintaining a large military force. At the beginning of 1920 the statements were repeated and became more precise. According to one report circulated in the leading French and British journals, the total German armed forces were 1,062,000, divided into five branches and this was said to be a conservative estimate. Of these, 400,000 were attributed to the *Reichswehr* which was formed out of voluntary units during the Spartacide revolution in the opening months of 1919 and another 400,000 was attributed to the Civic Guards or *Eimwohnerwehr*. These or similar assertions were repeated at short intervals down to the last day of the year. The French complained that distant nations like England and the United

States unlike France not being in immediate danger, Germany was taking advantage of laxity in enforcing the terms of the Treaty to place herself on a strong military footing. At the meetings of the Supreme Council at Boulogne and Spa, Germany was ordered to abolish her enforced military service and to reduce the army to 150,000 men by October 1, 1920 and to 100,000 men by January 1, 1921; to dissolve the so-called *Sicherheitspolizei*, a sort of military police created by the Berlin government against the Bolsheviks both in and outside Germany and numbering about 300,000; and to disarm the civil population including so-called popular guards or *Eimwohnerwehr* comprising about 300,000 men. The first two of these measures were promptly carried out. On July 1, the suppression of compulsory military service was voted and volunteer recruiting was prescribed for the next ten years. But the measures adopted for the organization, according to the French critics, provided ingeniously for an increase of the numbers by a clandestine method admitting of great elasticity, and described in detail in the French press: A report was made by Marshal Foch December 31, toward the end of the failure of Germany to carry out the obligations in the matter of disarmament, and the French government addressed a note to Berlin dealing in detail with Germany's failure to observe the requirements of the Spa protocol of July 9 in respect to disarming the police and delivering surplus war material and guns. The French note asserted that German laws were inconsistent with the military clauses of the Treaty, that the commission of control had not been able to verify the German contention that the army had been reduced to 100,000, and that the commission had encountered resistance to its orders for the destruction of air-craft material. The German government in reply attempted to disprove these statements except in regard to certain points where exact conformity to the terms imposed had been impossible. It declared that Germany did not refuse to disarm the home guards of East Prussia and Bavaria, but that conditions there did not permit so prompt an execution of the terms as in other parts of the country. It asserted that the security police existed no longer; that the German government had obeyed substantially the demands of the control commission; that it had no intention of evading the obligation it had undertaken at Spa; that the existence of self-defense organizations was not inconsistent with Article 177 of the Treaty, etc.

REPARATIONS. The quarrel over the amount of reparations, the fixing of that amount in advance, and the question whether Germany was seeking to evade or unable to meet her obligation continued without interruption throughout the year. After the Boulogne conference the most definite plan before the public was one that provided for payments of 3,000,000,000 gold marks annually for the first five years, payment of 6,000,000,000 annually the next five years, and payments of 7,000,000,000 annually the next thirty-two years, a total of 269,000,000,000 marks in forty-two years, it being calculated that at 8 per cent interest, with 1 per cent amortization, this would be equivalent to 85,000,000,000 marks gold, current value. France, receiving 55 per cent of the indemnity, would thus get about 47,000,000,000 marks gold, about 60,000,000,000 gold francs at present value, or 148,000,000,000 gold marks, if she waited

forty-two years to get it all. It was the plan at that time that France could borrow in England and America on her share by means of Reparation Commission bonds guaranteed by Germany, England, France and Belgium, bearing 8 or 9 per cent interest, and that thus she would be in a position to meet her current reconstruction expenditures. Much bitterness was displayed by French writers against British laxity in the matter of the reparations. The opposing points of view are presented in the paragraphs on Anglo-French Friction below. Early in November it was learned that an arrangement had at length been reached between the French and British governments in respect to procedure in the matter of reparations. In France this was regarded as a diplomatic victory. It was in fact a compromise whereby the French government agreed to meet the representatives of the other Allies and also the representatives of Germany and to consider the question of fixing definitely the amount of the indemnity. The British demanded that German experts should be admitted to the discussion. The terms of the accord were published on November 12 as follows: (1) The meeting at Brussels of technical experts of the allies along with technical experts of Germany. (2) A conference of Allied Ministers at Geneva after the plebiscite of Upper Silesia not later than the middle of February, 1921 to discuss in its entirety the question of reparations; Germans to participate in an advisory capacity. (3) The Reparations Committee to proceed then to the fixing of the total amount in the matter of payment of the indemnity from Germany and to make a report to the Powers in regard to Germany's ability to pay. (4) The Supreme Council to meet and fix penalties in case of non-execution.

RUSSIA AND THE OTHER POWERS. The policy known as that of the "sanitary cordon" employed against Russia in 1919, was definitely abandoned at the close of the year, and its complete failure was implied in the decision announced, January 16, by the Supreme Council, that the Russian blockade would be raised. The Council announced at this time also, that trade relations would be established, but denied that it intended to recognize the Soviet government. The Russian question came up at the conference of San Remo but without any definite result. The Italian prime minister, Nitti, urged that trade should be resumed but while this was favored in general terms, each nation was left to its own discretion in the matter and it met with little approval on the part of the French, who declined to admit the Bolsheviks' contention that the debt of the former Russian government should be excluded from the present government's obligations, which meant a repudiation of some 26,000,000,000 francs due to France. At Copenhagen an agreement was signed with certain international commercial groups looking to a prompt resumption of trade (April 23). In this matter the Russian representative, Krassin, was active. His subsequent efforts to re-open trade with Sweden failed as did also the efforts of the Moscow government to arouse American interest in the matter. Meanwhile British, German, French, and Italian prisoners continued to be sent back to their respective countries. The Japanese signed a protocol April 29, with the Russian officials in Siberia, but still continued in control of Vladivostok and the military group

in Siberia was accused of arbitrary acts by the members of the inter-Allied railway commission. France continued consistently anti-Bolshevist. On August 11 France recognized the government of General Wrangel as the government *de facto* of Russia. The comment of French government organs emphasized the importance of this new government; and said that General Wrangel had taken measures to prove that he had been freely accepted by the populace, that he was governing well and defending their liberties. He further, according to French opinion was the representative of popular rule whereas the Soviet government was, as it declared itself, simply a dictatorship. France was ready to recognize any government in Russia, no matter what its form on condition that it was really representative of the nation, and not of a mere faction. In addition to these reasons for recognizing Wrangel, another one of great force in France was his recognition of the obligations of the government to pay off the debts incurred under the old régime, including the large debt to France. This attitude brought France in opposition to the policy of the British government. Many of the British papers declared that the French recognition of Wrangel was entirely opposed to British ideas and was a menace to the relations of France and Great Britain. Italy and Great Britain inclined to a policy of moderation and the resumption of trade. For an account of the Krassin mission and the negotiations on this subject see GREAT BRITAIN. On November 19 it was learned that the British government intended to carry out the arrangement resulting from these negotiations (June 30 to October 6). The resumption of trade according to the British demands was to rest upon the mutual cessation of hostilities. The conditions included the following points: The Soviet government was to refrain from hostile actions and propaganda directed against British institutions, and from military action or propaganda to encourage the peoples of Asia in opposition to British interests; immediate release of British prisoners in Russia; and recognition by the Soviet government of the principle of liability to pay compensation to private citizens who had supplied goods or services to Russia. There was opposition in a portion of the press to the principles of this agreement, especially to a clause which proposed that the British government should not place any embargo on gold securities or commodities shipped from Russia in payment of imports. The long correspondence on the subject was made public at this time.

RUSSO-ESTHONIAN TREATY. The first treaty which the Russian Soviet government made with the new Baltic states was that signed at Dorpat February 2 with Esthonia after negotiations lasting about a month. The principal points in it were, after declaring that the war should cease from the date at which the treaty became effective: The determination of the frontier by a line defined in detail, a joint commission being appointed for the delimitation; provision for a neutral military zone January 1, 1921; obligation on the part of both signers to prohibit the maintenance of any hostile armies or their passage through the territory or the transportation of munitions from enemies; renunciation by both of all claims for military expenditures or war losses; an agreement to an exchange of prisoners.

POLAND. For an account of Poland's repulse of the Soviet armies and the subsequent Treaty, see POLAND, *History*. The main question before the American people in 1920 in respect to Poland was whether or not her recent policy had been imperialistic. An enormous body of writing centered about this subject and it was difficult to arrive at any impartial conclusion. President Wilson, when he vetoed the proposed peace by resolution on May 26, criticised the arrangement therein proposed because among other reasons, it had nothing to say about the re-establishment of an independent Polish state. The championship of Poland had been one of the principles in his proclamation as a basis for ending the war long before the celebrated fourteen points were in evidence. As to American interest, it was argued that the success or failure of Poland was of the utmost importance to the United States for the most important financial interests were involved in it. After the war all of Poland's frontiers were in the hands of the enemy. The government of M. Paderewski and Gen. Pilsudski, criticised though it had been for its imperialistic tendencies, had to contend with these dangers. It succeeded in coming to terms with the Lithuanians and putting an end to the German danger; in turning the Ukrainians from enemies into friends; and in agreeing to a friendly settlement of the difficulties with the Czechs. As a consequence there remained only the Bolshevik front which had to be defended. In midsummer the military situation of Poland according to the United States government was not dangerous. The city of Kiev was still held firmly by the Ukrainians and Poles, and Minsk and Vilna were still in Polish hands. According to reports of June 1, after heavy fighting, the Reds had been defeated by the Poles near Borisov with a loss of many prisoners and the line of the Beresina river had been re-taken. In the north, on the other hand, the Reds had driven back the Polish lines to some extent and a drive against Vilna was threatened. It was reported at that time that Poland with her ally, the Ukraine, was secure in the possession of about three-fourths of her ancient kingdom and that about half the territory was outside the provisional eastern boundary fixed for Poland by the Supreme Council at the Peace Conference.

This last point is of great importance in the whole discussion of the subject because it was the ground on which the critics of Poland charged that she was pursuing a policy of imperialism, and called the Polish operations in this region a war of conquest. It was repeatedly urged throughout the year that with the Polish forces several hundred miles beyond the line fixed by the Treaty it was absurd to speak of Poland as fighting a war of self-defense. These charges were as frequently denied or dismissed. The justification for Poland's seizing so much territory in White Russia was presented by her partisans as follows: In November 1918, when Poland regained her freedom, the Bolsheviks were nearly at the gates of Warsaw. When the Peace Treaty was signed in June 1919, the Bolsheviks had been driven several hundred kilometers to the east. In December, 1919, Poland's eastern boundary was fixed provisionally. Meanwhile the Poles had continued to drive back the Bolsheviks and were holding a strategic line just to the east of Minsk or 250 kilometers

east of the new boundary. This region was still well within the ancient boundaries of the kingdom of Poland. The Poles had accomplished this by themselves and in spite of the withdrawal of America and England from northern Russia. When the Allies through the Supreme Council invited them to fall back they naturally objected on the ground that this request was unaccompanied by any provision for preventing the enemy from following them up. Thus the Poles were technically in the position of invaders, but as a matter of fact, they had delivered this region from the Bolsheviks; they were feeding and protecting the inhabitants; and they were trying to restore the country to a productive state. Furthermore, according to their point of view, they had not conquered the inhabitants, for these inhabitants were their former subjects. Nor did they claim this territory, either as a result of their occupation or because of racial affinity. They merely claimed the right of self-determination for the inhabitants. General Pilsudski and the Diet had disavowed any intent to annex forcibly this region. It was further argued that the fixing of the provisional eastern line practically left the nation free to push as much further east as it was able. When Poland signed the Treaty, it left her eastern boundary to be determined later by the Allied and associate Powers. The Polish demands in midsummer were as follows: the retirement of the Reds beyond her 1772 boundaries, that is to say, the boundaries that existed before Poland's first partition. The Peace Treaty and the later proclamation concerning the boundary left Poland with an area little more than one-third of the ancient kingdom, that is to say, of Poland as it existed before 1772, and it excluded some 8,000,000 Poles from Poland. The Poles were dissatisfied with this arrangement. They held that besides excluding these 8,000,000 Poles, the provisional boundary was a line unsuited by nature to military defense. In short, they held that they had been left in a bad position with only vague hopes of the support of the League of Nations. They thereupon determined by their own efforts to check the Red advance and to strengthen Poland in every way. They had united with Latvia against the German Baltic troops in the operations around Riga and they had joined the Polish and Lettish frontiers against the Bolsheviks. Those who sympathized with Poland's course throughout all this believed that all criticism of it was due to such influences as German propaganda, Soviet propaganda, the interest of Great Britain in resuming trade with the Soviet government, and in general, ignorance of the true facts, and acceptance of reports colored by the self-interest of those who circulated them. They argued that the Germans naturally were alarmed by Polish success against Russia because they looked to Russia for their own salvation. They regarded the provisional eastern boundary of Poland as a rampart for the protection of the Bolsheviks and they expected to penetrate and exploit Russia by means of it. Berlin press agencies were flooding central Europe with publications attacking Poland and predicting Polish disaster.

It will be recalled that under the treaty a corridor was cut through German land from Poland to the port of Danzig, which port was made a free city, contrary to the desire of the Poles, who wished to control it themselves. The

Poles also hoped on the basis of the fourteen points that the several million Poles living in White Russia would be allowed to vote for annexation to Poland, but the Supreme Council did not give orders for such a plebiscite. According to the Poles, White Russia was far more Polish than Russian owing to political relations, similarity of language, and Roman Catholicism, to say nothing of race. The Poles contended that comparatively few Russians were to be found there. Moreover the agricultural development of the country depended on Poland on account of its geographic position. As to the figures given out by the Poles they were as follows: Assuming the German and Czechoslovakian plebiscites to be favorable to Poland, the population would be 27,500,000 and the area 291,000 square kilometers, as compared with an area of 753,000 square kilometers before the partitions, within which area at the present time about 52,000,000 people lived. Supposing the eastern boundary to be acquired, the population would be about 35,000,000. This represented Poland's maximum claim and still numerically she would fall short of her power before the partitions.

Such were the arguments put forth on behalf of Poland down to the middle of the year and widely presented in the American press. The opposite side though prominent enough in England was not so conspicuously argued in the United States. It consisted in general of a denial of the assumptions on which the above statements were made. For example, it denied completely that the people in the region occupied by Poland to the east of her provisional boundary had any desire to affiliate with Poland or indeed had any racial affinity with the Poles. They asserted the direct opposite of what is said above and contended that the regions were inhabited for the most part by Russians; also, that the Poles there who had been under alien government for nearly 150 years no longer had any attachment to a Polish state. Moreover if the principle that national re-adjustment and self determination were to go back a century and a half as was here claimed, a most confusing condition would arise throughout the world. It was not reasonable to carry national claims back 150 years into the past for the determination of present boundaries. It was argued also that Poland had been impelled to her aggressive policy by the instigation of France, for the French government wished to lose no chance of inflicting injury upon the Bolsheviks. The French government had encouraged Polish advance and had supplied the Poles with military leaders and advisers. The invasion of Russia instead of being open to objection was, from the French point of view, wholly desirable and subject to no limitation whatever so long as the hated Bolshevik régime existed. Critics of Poland therefore saw in her advance, the self-interest of a power eager to regain its ancient and forgotten place on the map, and ready to serve at the same time as a cat paw in the hands of a French government, which desired the downfall of a Russian government that would not pay the debt of the former autocracy to France. As to the argument that Poland was on Russian soil simply to protect her own frontiers, this was dismissed as ridiculous on the face of it for the occupation of territory extending 250 kilometers into the enemy's country was not

necessary to self-defense. Moreover it was usual to argue in all imperialistic ventures that when one government seized the lands of another, it was acting in self-defense.

In a note addressed by the American Secretary of State to the Italian Ambassador, August 10, the attitude of the United States toward Poland and the Soviet government was explained. The principal points are as follows: In general, the United States could not admit that a general European conference should come about as a result of the armistice negotiations and it refused to recognize the Soviet government. The United States desired a united free and independent Poland and would direct all its policy toward that end. It was not opposed to an armistice between Poland and Russia. But it could not take part in any plan which would result in turning the negotiations over the armistice into a general conference, for such a result would involve two things which the United States could not accept, namely, recognition of the Bolshevik government and settlement of the Russian question on the basis of a dismemberment of that country. The United States since March, 1917 had followed with sympathy the efforts of the Russian people to reconstruct their government on the basis of popular rights. It had been the first to recognize the justice of the revolution and to recognize the provisional government. It did not believe that the Russian people were responsible for withdrawing from the war and for the disastrous Treaty of Brest-Litovsk and it believed that the people would triumph over the existing anarchy in Russia. Its belief in this ultimate triumph of the Russian people explained its refusal to approve the decision of the Supreme Council at Paris, recognizing the so-called republics of Georgia and Azerbaijan, which had been formed within the limits of the former Russian state. Because Russia at present found herself in the grip of a brutal and irresponsible government, it did not follow that the dismemberment of the country should be admitted. While the United States government was in thorough sympathy with the Allied Powers in their desire for a pacific solution of the European problems, it did not see how the recognition of the Soviet government would tend to that result and it was therefore opposed to all relations with that government, aside from those necessary to discuss the matter of the armistice. It was an incontestable fact that the present masters of Russia were not governing by the will or consent of a considerable part of the Russian people. Although two years had now passed since they had seized the government promising to protect the constituent assembly they had as yet provided for no popular election. The present heads of the Russian government had openly declared that they were ready to sign with foreign nations agreements which they had not the least intention of observing. This attitude of contempt for their engagements was based on the theory that no agreement with a non-Bolshevik government was morally binding upon them. They not only had avowed this spirit, but had acted upon it; and their various promises of assurances and guarantees were not to be taken seriously. The government of the United States knew that the Bolshevik government was under the domination of a political faction which had many international branches through the so-called "Third International." This body which

was subsidized by the Bolshevik government out of the public revenue had for its avowed aim the spread of the Bolshevik revolution throughout the entire world. There was no common ground of understanding between the United States government and a government whose views of its international relations were so different from its own. The frontiers of Russia must include all territory of the former Russian empire with the exception of Finland, Poland within its ethnic limits, and such territory as should be assigned to the Armenian state. This principle would involve the withdrawal of all foreign troops from the territory within these frontiers, and, in the opinion of the United States government, a declaration to this effect should be made by the Allied and associated powers. This declaration ought to be followed by warning that no transgression of it would be permitted on the part of Finland or Poland, or any other power. If this were done the Bolshevik régime would be deprived of its support from the nationalist spirit of Russia.

In a reply of the French foreign office the principles of the above note were cordially approved.

VILNA. An obstacle was thrown in the way of an adjustment in Central Europe by the adventure of General Zellgouski at Vilna. On October 9 the White Ruthenian division of the Polish forces under his command captured the city which was unable to offer any serious resistance. The Lithuanian troops retired through the city as the enemy advanced in it, and there was but little street fighting. The invaders at once proclaimed a new Lithuanian government at Vilna, saying they had come to liberate the fatherland from "eternal enemies who tried to introduce bloody Bolshevik government"; and they repudiated the Russo-Lithuanian treaty. They appealed to the principle of self-determination. Their aim was to set up a government more favorable to Polish aspirations and ultimately secure annexation to Poland. On October 10 the Control Commission of the League of Nations arrived at Vilna but realizing that nothing could be done went on to Kovno. Zellgouski had acted in defiance of the Warsaw government, which afterwards disavowed his action, but Polish sentiment appeared to be in its favor and official disclaimers were mild and indicated an intention ultimately to pardon it. The Lithuanians protested to the League of Nations and the Powers. In the protest addressed to the United States they said the Polish government had permitted reinforcements to join the troops of Zellgouski. The Geneva Assembly of the League of Nations as noted above opposed the Polish raid on Vilna. It provided for the organization of a small force from Great Britain, France, and Spain, to which were to be added contingents from Belgium, Denmark, the Netherlands, Sweden and Norway. All these Powers contributed with the exception of the Netherlands which at the close of the year was awaiting action by the legislature. This international army entered the region between Poland and Lithuania and put an end to the conflict.

DANZIG. The free city of Danzig was placed under the protection of the League by the treaty. During the year it was under the administration of Sir Reginald Tower, as high commissioner, under the League. A constituent assembly was

arranged for and plans were made for a permanent constitution. There was anxiety in French and Polish quarters in respect to this constitution which was characterized as the work of pro-Germans and as containing several things prejudicial to Poland; and on October 22, the Poles through their delegates at Paris declared their intention of asking from the Council of Ambassadors the right to continue negotiations in respect to the Danzig agreement. The Poles alleged that this agreement did not fulfill the stipulations of the Treaty in respect to Polish access to the sea and Polish control of customs. The agreement created a committee of control over the port made up half of poles and half of residents of Danzig under a neutral president. The Poles demanded the right to buy land and develop the port so as to admit of an annual movement of about 5,000,000 tons; and they also demanded execution of the clause placing Danzig under the jurisdiction of the Polish customs. At the discussion of the Danzig question before the Council of the League of Nations, November 14, the Polish representative, Paderewski, demanded Polish military control on the ground that the port had been assigned by the Treaty to Poland, and that without military control, Poland could not have full use of the port. This was opposed by the German representative from Danzig who argued on behalf of the principle of self-government. In November the problem of Danzig had not yet been solved. Article 104 of the Treaty had provided for a convention determining the relations between Poland and the free city of Danzig. It was declared that the chief allied powers and their associates would determine this agreement which was to place Danzig under the Polish customs administrations to provide for a free zone and to assure Poland of the control and administration of the Vistula and of the railway system within the limits of the city as well as of the postal, telegraph and telephone communications between Poland and the port. The text furthermore provided for the assurance of Poland without restriction of the free use of waterways, docks, basin, etc., within the free city and the control the prejudice of the Poles residing in the city. Moreover no discrimination was to be made to the prejudice of the Poles residing in the city. The importance of Danzig to Poland was manifest. The new Polish State had no other outlet on the sea. Danzig being at the mouth of the Vistula dominated the entire Polish river system. It was argued that if Poland were denied the free use of the port she would be deprived of the necessary outlet for her commerce and would therefore fall under the economic control of Germany. The events of 1920 showed moreover that Poland being shut in between hostile Germany and a Bolshevik Russia could not defend her independence if she did not have the port of Danzig, to assure her of provisions. At the conference of the ambassadors, the representative parties, namely, the Warsaw Government and the Government of Danzig, submitted their projects. The former sought to prevent any obstruction on the part of the inhabitants of Danzig of Polish exports and imports. It wished to make Danzig a Polish port rather than a free port, as England had demanded. Accordingly it claimed part of the docks and it insisted on practically complete customs control. The

Danzig project on the other hand was based on the principle of the sovereignty of the free city. It called for a Danzig customs control independent of the Poles and for an administration of railways and water connections under a mixed commission. It sought to prohibit Poland from concerning itself with the Polish inhabitants of the city. The French consistently with their support of Poland throughout held on general principle that all the claims of Danzig were without foundation. It was impossible to reconcile the two plans and a compromise was likely to please neither party. The problem was unsolved at the close of the year.

THE QUESTION OF UPPER SILESIA. Much was said in the French press about a German campaign for acquiring Upper Silesia. The German commissioner in the matter of the plebiscite asserted the principle that persons born in Upper Silesia though not domiciled there should be entitled to vote and also persons who though not born in Upper Silesia had been domiciled there after December 1, 1918. On the Polish side, objection was made to this as indicating a desire on the part of Germany to profit from the votes of Germans who had merely by chance been born in the region, though they had left it without intending to return, and also of those Germans who had settled in Silesia after it was clear that Germany had an important interest in their doing so. It was estimated that between 250,000 and 300,000 Silesian Germans were scattered throughout the empire. With their votes and the admission of the more recent German settlers, the government of Berlin hoped, it was said, to falsify the plebiscite, giving the Germans a merely artificial majority. If the Germans insisted that the plebiscite should not take place until spring, it was because they sought more time for the transport of voters. The Germans were charged by the Polish and French writers with the intention of colonizing all the doubtful districts with compact masses of voters who would demonstrate in the favor of Germany. There were said to be in East Prussia certain districts where these immigrant voters were more numerous than the residents. The German papers were saying that English and Italian troops ought to maintain order during the plebiscite. The Polish and French writers seemed to see in this an exception that the Allied forces on guard would countenance the German programme. The danger of concentrating 200,000 or 300,000 Germans in Upper Silesia at the time of the plebiscite was emphasized. It was pointed out that German organization of a strictly military character had been carried out and that a central bureau had been established at Breslau apparently for administration purposes, but really composed exclusively for former soldiers with Prussian officers at the head. These were awaiting the right moment to intervene and settle the question by force. Reports were published to the effect that men belonging to the Reichswehr, armed with revolvers had been sent into Upper Silesia to organize a movement against the Poles and the French. The latter regarded as a suspicious circumstance the fact that Germany insisted that the plebiscite should be held in all the districts on the same day. They implied that this indicated a purpose to employ the troops that Germany had organized. The Germans were said to be making every effort to influence the Silesian population—for example, by

promising them self-government as a part of the empire. Hopes were held out to them that they would possess complete autonomy under German government. Chancellor Fehrenbach declared that if the result of the plebiscite were favorable to Germany, Silesia would be admitted as a self-governing state under the German constitution. In other quarters of Germany, however, there was opposition to this policy and it was proposed especially by Prussian statesmen that the government should confine itself to vague promises. These charges against the German government had been made by French and Polish partisans frequently during 1919 and they continued throughout the year. As the date appointed for the plebiscite drew near there were reports that war between Germany and Poland would follow a decision favorable to Germany. The plebiscite was deferred till early in 1921.

FRANCE AND POLAND. As the comments of the Liberal papers in England and the United States exhibited the Polish situation in a wholly unfavorable light and while attacking the French position did not make clear what that position was, the following statement of the French case is here presented. On June 5, 1918 the Supreme Council of War decided that the creation of an independent Polish state with free access to the sea was one of the conditions of a solid peace and the rule of law and justice in Europe. In the Treaty Articles 87 to 93, inclusive, embodied this decision. Finally Poland as a signer of the Treaty became a member of the League of Nations. Now inasmuch as the Bolsheviks from the beginning were bent on the destruction of the Polish state the policy of the Allies in the matter was definitely fixed. It was their duty to protect Poland. Moreover, in all the countries of Europe the Socialist organizations had ranged themselves on the side of the Bolsheviks and they did not content themselves with mere declarations but acted openly against Poland. This had been the attitude of the British Labor party, the Italian railway men, and the extreme Socialists in German Switzerland, for example. Poland was struggling against these radical forces which were trying to dominate and exploit the working populations. The attitude of the governments of the countries concerned had been as follows: In the first place Germany did not conceal her desire that Bolshevism should work in her interest for the destruction of the Treaty, and she had an especial interest in Poland on account of her wish to regain the Polish provinces that had been detached from Prussia. She would like to play the role of savior of Russia. Her policy had been clearly indicated by events in the Saar, in Upper Silesia, in Eastern Prussia and at Erfurt. As to the little states of Central Europe, threatened as Poland was by the danger of absorption within the Bolshevik state, their attitude was hard to understand. For example, Lithuania not content with offering her territory to Germany and Russia for the passage of their troops had even united her forces with the Germans and Bolsheviks in the attack on Poland. In the autumn relying on the support of the Germans and the Soviet government she refused to enter into any agreement with Warsaw. Czechoslovakia had taken advantage of Poland's difficulties by settling in her own interest the question of Teschen, and after that had followed a neutral policy. Rumania had remained silent.

While the course of these little states could perhaps be pardoned in view of their weakness the attitude of the great Powers among the Allies had no such excuse. The British cabinet had taken squarely a position against Poland. While Poland was claiming, according to her rights, the material aid of her Allies, England openly favored the interests of the Bolsheviks. At least this had been the spirit of the government though public opinion in England seemed not to favor it. Italy had completely reversed her policy and drawn away from Poland. Public opinion looked to an intervention of the Council of the League of Nations but nothing had come from that quarter. Late in the summer there had been a meeting at London to consider the danger of a conflict between Moscow and Persia. The representative of the League at Danzig had caused the passage of arms and munitions destined for Poland to be forbidden contrary to Article 104 of the Treaty. Only France had maintained a worthy attitude.

In this brief summary it will be observed that no attention is paid to any of the arguments reiterated far and wide in the press of English-speaking communities and particularly the argument that Poland had taken an aggressive course. Although Polish troops had been for months hundreds of miles behind their own borders having invaded the territory of the Soviet government and although Poland claimed territory not only far in excess of that allotted to her by the Treaty but territory peopled by an alien race, the French case as above indicated had nothing to say on these points. In general each party to the dispute proceeded along the line of its own interest or beliefs paying no attention to the arguments of the other. The consequence was that in this dispute as in many others during the year most of the discussion was completely valueless serving only to stimulate those readers whose minds had been made up already.

THE ARMISTICE AT RIGA. The signature of the armistice at Riga by the Polish and Russian delegates gave assurance of an early peace between the two countries. In quarters friendly to Poland there was some surprise at the moderation of the Bolsheviks and it was hinted that the peace was only a provisional one. The question of Galicia which was the most difficult of all was settled in principle. Among the French the fear was expressed that the Bolsheviks were merely making a temporary truce with Poland on account of their insecure position in Russia and the danger that was threatening them at the hands of General Wrangel. Having their hands free on the Polish frontier they would be able to transfer their forces to the Crimean frontier and dispute the advance of Wrangel. It was said that the Germans had made an agreement with the Soviet government to aid it in its struggle with all its enemies and that war material was passing from Germany into Russia. It was said specifically that military transports destined for Poland had been held up in the Kiel canal and at Danzig contrary to the terms of the Treaty and that the Council of Ambassadors protested and finally secured the free passage of these transports. The German authorities, however, disclaimed responsibility for these incidents laying the blame either on their Bolshevik workingmen or on the force of necessity. There was no

doubt, however, according to pro-Polish writers that the Germans were responsible.

TREATY WITH HUNGARY. On account of disturbed conditions in Hungary, the treaty between her and the Allies was delayed for three months. It was presented to the Hungarian delegation, January 15, but straightway encountered such determined opposition on the part of the Hungarians, that it was reconsidered by the Supreme Council. Some slight changes were made and the treaty was again presented and was signed in Paris, June 4. The main protest had been made against the territorial clauses. These provided that Hungary should give up her claim to all territories awarded to Italy, Jugo-Slavia, Rumania and Czecho-Slovakia. The Allies, however, would not give way in this respect. Other features of the treaty were as follows: Limitation of the army to 35,000 men; requirement that Hungary should be responsible for her part of the Austro-Hungarian debt; free export of food-stuffs into Austria; and the assurance to Austrian buyers of as favorable terms as those offered to Hungarians. The other clauses were similar to those of the treaty of St. Germain with Austria. The signature of the treaty was preceded by agitation in Hungary on the part of the irreconcilable group of the Christian National party headed by the former prime minister, Friedrich. The day of signing was made a day of national mourning in Budapest and was the occasion of a series of riots in which several Jews were killed and many wounded. In the National Assembly and in the churches and public meetings, the treaty was bitterly denounced and speakers, including members of the cabinet, declared that its terms could not be fulfilled and that it contained the germs of future wars. The treaty was ratified at Budapest, November 15. See HUNGARY, *History*.

FRENCH POLICY IN CENTRAL EUROPE. In the French press, M. Millerand was applauded for having pursued a policy in central Europe favorable to the interests of the liberated nationalities. It was said that he had placed them under the protection of France and this policy in central Europe, especially along the Danube and in the Balkans was welcomed as certain to increase French influence and consolidate the results of the victory. The same policy as seen by many British Liberals and especially by the members of the Labor party were described as follows: The French government with the aid of capitalists was said to be extending its economic control over the new states of Europe. Great munition plants in Czecho-Slovakia and in Upper Silesia and Poland had been acquired by France. The economic life of Hungary was passing under French control; France was paramount in banking circles and in the management of railways and river navigation and French interests had recently secured concessions in the port of Budapest. French journalists saw in all this a praiseworthy activity and prudence on the part of their diplomats and financiers, while in England the policy was described as part of a vague and magnificent scheme for giving France the leadership in Europe through influence over the little states and Poland up to the shore of the North Sea. In certain quarters this policy was attributed to the determined hostility of France against Bolshevism. French writers admitted that this element entered into their foreign policy and congratulated themselves on that

fact. France was the country that stood, according to them, for good order and had escaped the dangerous tendencies under certain other governments toward anarchy. She certainly desired to serve as a bulwark against disorder for the protection of the little states in their dire need of external and internal peace.

LITTLE ENTENTE. The text of the convention known as the Little Entente was published at Belgrade, November 11. It was defined as a purely defensive agreement and it provided that in the event of an unprovoked attack by Hungary on either member of the convention the other was to come to its aid and that neither of the contracting parties should conclude an alliance with another State without the other's consent. The convention was to be submitted to the League of the Nations and it was to last two years. The contracting parties were Czecho-Slovakia and Jugo-Slavia, but it was expected that Rumania would be induced to enter and efforts were to be made to secure the adherence of other Balkan States. In the meanwhile M. Take Jonesco, the Rumanian foreign minister, in the course of an interview in September had set forth the nature and purposes of the Little Entente. The question had been raised whether it would pursue a neutral attitude between eastern and western Europe or would side with one or the other. He said that its policy would be neutral and that its aim would be distinctly for the maintenance of peace but that as the western Powers were embarked on that same policy it would naturally unite with them. The main object of the Little Entente was not only to safeguard the rights of its members against rivals but especially to protect the general European interests. Inevitably difficulties and differences had arisen among the five states. If the League of Nations were already what it ought to be, there would be no need of such measures as the formation of the Little Entente. But in the present indeterminate situation there was such a need just as France had found it necessary to enter into an agreement with Belgium. If the Little Entente were meant to serve as a war measure, it could not last a week, but as an instrument of peace working along with the western powers it would be one of the best results of the war. As to the relations with Hungary, it was not expected that the Hungarians would be contented necessarily with the results of the war; or that they would cease at once to demand the incorporation of territory that was inhabited by members of their race. The new combination would live on friendly and peaceful terms with Hungary. Nevertheless it would not look in that quarter for support but rather would rely on the friendship of France for Rumania. As to the Danube question they would certainly arrive at an understanding. In Rumania the question was not merely a technical one but stirred deeply the popular imagination because it was by means of the Danube that Austria had in the past held Rumania by the throat in order to enforce an Austrian alliance. Demands that the status of the Danube as regards the Danube Commission and the right of the states on its banks should be the same as that which they had established on the Rhine seemed so just that it was hard to imagine why they should be refused. It would be absurd, for example, to refuse on the Danube the same sort of arrangement that France had accepted on the Rhine.

The origin of the Little Entente may be briefly outlined as follows: When Poland seemed to be in danger the foreign minister at Prague, M. Venes, took measures to insure the neutrality of his country. The policy of Czecho-Slovakia was to avoid any form of conflict with its neighbors and especially as regarded Germany and Russia neutrality had to be observed because Czecho-Slovakia had a considerable German population on the one hand and was racially akin to and therefore in sympathy with the Russians. The foreign minister then set about organizing a league of neutral nations which should hold itself apart if the Germans and Russians formed an alliance. The new grouping known as the Little Entente was formed at the moment when the members of the great Entente were unable to agree upon a policy toward Russia. Czecho-Slovakia and Jugo-Slavia first united and then tried to win over Rumania. The Rumanians gave only a conditional consent, however. The new combination was especially concerned with the danger of Hungarian attack. Several great provinces having been taken from Hungary it was feared that she might take advantage of circumstances to try and regain her lands. The new grouping was regarded with some alarm in France especially as affecting the recent attempts of the French government to come to some understanding with Hungary. An agreement had been concluded between French and Hungarian commercial bodies which promised greatly to develop French commercial interests in Hungary. It was an opportunity for France to take her part in the exploitation of banks, railways, electrical works, etc., in Hungary before the Germans regained their commercial strength. It was hoped that French enterprise might succeed in replacing German capital in developing the resources of countries that had lagged behind in respect to industrial progress. The policy of France was to aid in the establishment of powerful states in the east of Europe that might serve as a counterpoise against Germany in the future. This accounted for their interest in the return of orderly government to Russia and in the desire that out of the present conflict in the Balkans a strong and stable system might develop. Certain French writers argued that Hungary was the best nucleus for a new Anti-German group in the southeast of Europe. However, the authors of the economic agreement between France and Hungary including the French minister were not of that opinion and it was argued that too great concentration of French capital in Hungary would be unwise in the long run.

The situation in the Balkans was described by travelers as still serious. Everywhere commerce was impeded by customs and the country was guarded by police. Although bridges had been rebuilt, free communication was still impossible on account of the suspicions between the states. The railway communications were unsatisfactory owing to the lack of adjustments at the borders, the different lines having no connections. Between Hungary and Austria all communication was suppressed because in the opinion of the Austrian Socialists, Hungary was in a reactionary condition. Hungary was in fact cut off from the rest of the world and in order to go from Vienna to Budapest it was necessary to take a steamer. The necessity of

passports and certificates of various kinds involved travel in a tangle of red tape. The postal service was bad and according to some reports practically inoperative. The authorities of one country blamed those of the other for these conditions. In short the Balkan countries were described by travelers as separated from each other by Chinese walls and commercial communication was out of the question.

THE ADRIATIC QUESTION. As noted in the previous YEAR BOOK, conferences on the Adriatic question were held in London during December, 1919. As a result of these, a memorandum was prepared by the representatives of France, Great Britain and the United States and delivered to the Italian representative December 13. This provided that Fiume should be a free buffer state under the League of Nations and that the city and hinterland of Zara should be a sovereign state under the authority of the League, if it became a member of the Jugo-Slav customs union; also that four specified islands were to be transferred to Italy and that Albania as an independent state should be administered by Italy under mandate, and that the city of Valona should be turned over to Italy. The other demands of Italy were rejected. Italy now requested that the treaty of London be fulfilled; and a new conference took place in Paris for the purpose of forming a compromise agreement. In this the United States was not represented. The new conference modified the December proposals, and provided that Fiume should not be a free buffer state, but an independent state under the League and joined to the territory of Italy by a narrow strip along the coast, while its contiguous city Sussak should go to Jugo-Slavia, the port and transportation to be under the League of Nations; Zara to be an independent state under the League; the Italians of Dalmatia to have the right to vote for Italian nationality without leaving the country; Italian business enterprises in Dalmatia were to be safeguarded by treaty. This disregarded the boundary line proposed by President Wilson. The Jugo-Slav government accepted this settlement in general, but insisted on the frontier proposed by President Wilson. Upon being pressed for a more definite answer, the Jugo-Slav government rejected these proposals. On February 12 the Supreme Council insisted upon their acceptance without change, or the acceptance of the treaty of London. On February 14 President Wilson declared to the British, French and Italian governments that if the Adriatic problem was settled without the support of the American government, the latter would consider withdrawal from participation in European affairs. The prime ministers of the Allies replied in defense of their arrangement and appealed to the President not to withdraw. The President replied, February 24, declaring, in justification of his objection, that the proposed agreement was contrary to the principles for which the war was fought, and suggesting that new conferences should take place between Italy and Jugo-Slavia for the purpose of agreeing on terms acceptable to both. The Allied prime ministers, February 27, offered to withdraw both the proposals of December 9 and January 20 in order to facilitate a solution. The President refused to consent to the withdrawal of the proposals of December 9 or

to the application of the treaty of London. New negotiations between Jugo-Slavia and Italy resulted in a failure to agree, March 9 but were later resumed.

THE TREATY OF RAPALLO. On November 12, the Italian and Jugo-Slav governments came to an understanding on the points at issue and signed the treaty of Rapallo. According to the treaty of London, concluded by the Powers of the Entente four weeks before the entry of Italy in the war, Italy was assured of the control of the Adriatic Sea. For the terms of that understanding and the points at issue after the armistice see preceding YEAR BOOKS.

The agreement reached at Rapallo was a compromise and as necessarily happens in such cases both parties made a sacrifice of their extreme claims. As to Valona and the Albanian protectorate Italy had abandoned her claims. In the arrangement at Rapallo, she recognized Jugo-Slav unity; renounced Dalmatia, with the exception of Zara, and renounced also all but six of the islands; and restored to Jugo-Slavia two small territories lying to the southeast of Istria. On their part, the Jugo-Slavs agreed to an Italian frontier enclosing all of Istria and extending as far as Monte Nevoso; and gave up any claim of control over the railway and port of Fiume. Generally, it appeared that Italy had agreed to limit her control of the Adriatic to the northern sea, while Jugo-Slavia had consented to the annexation by Italy of half a million of their fellow citizens. Yet in one sense, both of the Powers gained by the transaction. As to the Jugo-Slavs, they acquired a considerable part of the regions occupied by Italy after the armistice. If Italy had retained those regions, Jugo-Slavia would have been shut off from the Adriatic, whereas she now had ample possessions on the coast. As to Italy, an Italian newspaper set forth the results as follows:

"Encircled by her rocky barriers which are as formidable as a stormy sea, Italy is henceforth to be a sort of continental England. She has realized her most difficult aims—so difficult that the collapse of a giant empire a thousand years old was necessary for their realization. She is now hemmed in on the west by France, which certainly has no designs on Piedmont and on the east by a state, only one-quarter the size of Austria, which has recognized the Italian rights over all Italy. Henceforth, Italy is really a great power and she owes this to her own strength and not to the concessions of the European concert. That means in a word that the victory of Vettorio-Veneto was no ordinary victory but the end of an old system and the beginning of a new one. Three years before, Italy went to Rapallo suffering the humiliation of Caporetto. She now goes to Rapallo wearing the crown of victory." This however, did not represent the attitude of all the press. Certain papers declared that the last word on this subject had not been spoken and protested against an arrangement which left the Jugo-Slavs in possession of such important seaports and islands. The nationalists were far from content.

Fiume. In spite of the sensational methods of d'Annunzio the question of Fiume lost its hold on public attention during the year. In Italy itself it appeared not to be regarded with much seriousness. In September a proclamation of independence was issued by d'Annunzio on the

anniversary of his first appearance in the country and a constitution was made public. The new state was known under the title of the Italian Regency of Quarnero and included the city of Fiume along with the port and the railway, the islands which traditionally had belonged to Venice, subject to the approval of their population, and all the neighboring communities that should desire to unite with the new state if the latter decided to accept them. The limits on the west touched Italian territory. On the east they were to be drawn in accordance with the necessities of the future and by means of conventions with the communes which might wish to unite with the new state. The constitution included some features that occasioned ridicule—for example, articles dealing with architecture and decorative art and more or less bombastic phrases pertaining to the dawn of a new era of humanity, etc.—and critics remarked that the poet adventurer had confounded government with masquerade. After the announcement of the Rapallo agreement the d' Annunzio government issued a formal protest. This being disregarded d' Annunzio threatened to take possession of certain parts of Dalmatia and the islands on the coast. Thereupon the Italian government took measures to safeguard its decisions. A blockade of Fiume was enforced and the troops of d' Annunzio were shut off from the sea. A virtual state of war existed beginning on the afternoon of December 3. Hostilities came to an end, December 29, and the protocol was signed December 31. The terms included the release of the troops from the oath of allegiance to the Regency of Quarnero; restoration of prisoners; surrender of arms; and the giving up of certain islands in the Gulf of Quarnero. A new provisional government was set up.

BALKAN SITUATION. The economic situation in the Balkans was the product not only of the war itself but of the lines of division drawn between the peoples by the terms of the Treaty. Proceeding on the principle of racial unity so far as possible, the Treaty divided the peninsula among the respective new states without any regard to economic unity. Thus it happened that these states were generally cut off from some part of the economic resources upon which their populations depended. For example Czechoslovakia while rich in minerals and having a supply of industrial machinery was cut off from the sea and lacked means of feeding the population. The Slovaks on being joined to the Czechs were cut off from their natural economic relation with the Hungarians, nor did they have direct communication with Bohemia and with Moravia. The former Austrian kingdom suffered most of all being reduced to those provinces inhabited by Germans and containing the city of Vienna. It was cut off completely from the sources of food and raw materials and on the other hand, for political reasons its union with Germany was refused. Jugo-Slavia, a state almost as large as Italy was in danger owing to the Italian claims of being completely cut off from the sea. Plenty of food was produced but it was a question whether the means of export would be available. Again Hungary was deprived of her mineral resources and left within frontiers that offered no natural protection and without any outlet to the sea. The railway situation as described at the beginning of 1920

was chaotic. The railway systems of the former empire had been turned into short lines terminating at the respective frontiers and with no provision for through trains. In the mutual fear that prevailed the rolling stock of one country could not be allowed to pass into the other lest it should be seized. In short the predominance of political ideas in the settlement had entirely shattered the economic system upon which the different populations had hitherto been supported. Hence the importance of plans for a new integration through alliances or otherwise which under one aspect or another were much discussed during the year. It was pointed out that this Balkanization of Middle Europe was especially dangerous in view of possible Bolshevik aggression. This was the view of the French and of the writers in this country who supported the French policy. It was argued that when the Bolsheviks advance westward began the only protection would be Rumania and Poland for the whole region from Bavaria to Belgrade was in hopeless confusion.

THE TURKISH TREATY. The settlement of the Turkish question offered extreme difficulties owing to the internal disorders and racial and religious conflicts. Work on the treaty with Turkey began in February and was completed May 11 when the treaty was presented to the Turkish peace delegation. It left Constantinople subject to the Sultan, but provided for its permanent occupation by a small force of Allied troops. Certain coast areas, the straits of Dardanelles, the Sea of Marmora and the Bosphorus along with their approaches and the adjoining islands were to be placed under a Straits Commission appointed by the League of Nations and consisting of French, British, Italian, and Japanese representatives, with two votes each, and of Greek and Rumanian representatives with one vote each, provision being made for the representation in the future of Russia and the United States with two votes each, and of Bulgaria with one vote. The Straits were to be garrisoned by an international guard and to be opened in times of peace and war to all vessels without distinction of flag and not to be subject to blockade. Other terms of the treaty limited the Turkish army to 35,000 men subject to the addition of 15,000 in case of special necessity; provided for destruction of fortifications along the straits; prohibited the maintenance of military air forces, etc.; and included the following financial terms: No loan to be contracted without the consent of an international finance commission consisting of representatives of France, Italy and Great Britain, which commission was to control the budget, supervise the financial administration of the reform of the currency, and to fix the sum to be paid by Turkey for the cost of occupation; financial losses due to the war to be admitted as liabilities by Turkey. Other features were, protection of racial minorities; release of political and religious prisoners; reform of the laws in the interest of the liberty and safety of foreigners; trial of Turkish war criminals by Allied military courts; surrender of persons guilty of the massacres since August, 1914, to be tried by a court under the League of Nations, or some similar court. The political penalties were severe and amounted to the dismemberment of the empire. At the time of the war the total area was about 710,224 square miles and the

population 21,273,000, including 10,882 square miles with a population of 1,891,000 in Europe. The terms reduced the area to less than 100,000 square miles and left the population about 5,000,000 who were mostly Mohammedans. Turkey was to give up Thrace to Greece with the exception of a small region; to acknowledge Greek possession of the islands that Greece was occupying; to give over to Greece the administration of a large region in Asia Minor including Smyrna, Magnesia and other localities, which region had the right to decide whether or not it would annex itself to Greece by a popular vote to be held after two years. Turkey was to recognize the independence of Armenia, Syria, Palestine, Mesopotamia and the Hedjaz and was to allow self-government to Kurdistan. It was provided that the President of the United States should be invited to lay down the western frontier of Armenia and that the boundaries of Syria, Mesopotamia and Palestine should be fixed by special commissions. These last three divisions were to be under the direction of mandatory powers. Turkey was further to recognize French authority over Tunis and French Morocco, Italian over [?] Liberia, the Dodecanese and Castellorizo, and British over Cyprus and Egypt. To Great Britain, also, Turkey was to give over the rights that she had secured in the Suez Canal Treaty in 1888. The British government was to assume responsibility for debts based by Turkey on tributes formerly payable by Egypt and Cyprus now that those tributes had ceased. The execution of the treaty was to be under an inter-Allied commission of control at Constantinople which was to be supplied with inter-Allied troops to enforce its terms. The treaty did not embody some of the provisions recommended by President Wilson. The latter in March had addressed a note to the Allies urging among other things that the Turkish government be expelled from Constantinople, eastern Thrace be given to Greece, the port of Trebizond to Armenia, and the cities of Adrianople and Kirk-Kelissé in northern Thrace with an adjoining territory be given to Bulgaria. The Turks objected vigorously to the treaty and the Nationalists under their leader, Mustapha Kemal Pasha, definitely refused to accept it.

At length the date for the signature of the Turkish treaty was fixed at June 25. Meanwhile there were many reports in the western papers of hostility on the part of Turks toward the Greeks. It was said that the National party in Turkey was determined to fight the Greeks in Thrace and at Smyrna and that the Bulgarians would take the side of the Turks. To this the Greek press replied that such reports should not be taken seriously. It was reported, for example, that a certain Turkish general was going about trying to stir hostility to the Greeks at Adrianople and elsewhere. To this the Greek press replied that only a few restless spirits were being won over to his side and that the forces under him amounted to nothing. According to the Turkish press, if the Turks of Thrace resisted the Greeks, France and Italy would insist upon a revision of the Turkish treaty and change the boundary. Many reports were circulated by supporters of Constantine to the effect that the internal situation in Greece was serious—that M. Venizelos was losing ground and deserved to lose it. In Greece, according to a supporter of the government, the great mass of the people, however, were loyal

to Venizelos. A common remark was to the effect that if Venizelos succeeded in securing for Greece, Thrace, Smyrna, Epirus and the islands, the country was for him, but if he failed, then he had been fooled by the Allies and it would be a proof that ex-King Constantine's policy of neutrality would have been a wiser course and the country would not be for Venizelos. The success of Venizelos in securing his demands of the Allies won him wide support and he was so confident of his hold on the people that he twice declared in Parliament that if he were not returned by a majority at the next election he would abstain from politics. See *GREECE, History*.

By November, the Turkish Nationalists had entirely broken the power of Armenia (q.v.). The capital of the Armenian republic was occupied by their troops and the Russian government was preparing to come to some arrangement with the Turks for the use of Armenia as a road to the Mediterranean. The opponents of the Turkish Nationalists had had as their main support England and Greece; the former supplying the naval power and the latter the military. Some successes had been won by the Greek general during the summer and a part of western Anatolia had been conquered but the Greeks were not strong enough to complete their work. The war had ceased to be popular in Greece and a demand was made everywhere that the troops should be brought home. The popularity of ex-King Constantine was due largely to the feeling of disappointment at the results of the Greek expedition. Although Constantine had committed himself to the expansionist policy of Venizelos, it was not believed that he would keep up the war against the Turks. In France there was a tendency to draw to the side of the Turks as the successful party in order to promote the interests of France. Since Greece had rejected Venizelos, the French argued that advantage might be gained from Turkey at the expense of the Greeks. None of the powers had the intention of sending an army into the National Turks' domain, that is into Anatolia. In the confused state of affairs President Wilson was unable to take any effective measures for mediation on behalf of Armenia. See *TURKEY and GREECE*, paragraphs on *History*.

Early in December a difficulty arose at the Geneva assembly between the French and English delegates in regard to Armenia. The French representative desired that Armenia, that is to say, the Armenian Republic, be admitted to the League of Nations. To this the English representative was opposed. M. Viviani made an eloquent plea on behalf of the French proposal, but was voted down and immediately hastened to Paris, where it was reported that a ministerial crisis was impending, the subject giving rise to much discussion and many conjectures in the press. A lack of sympathy with the French proposal and with the French government was reported in France and the administration itself was said to be divided on the question.

GREECE AND THRACE. At the conference of London, western Thrace, so far as was occupied by Allied forces, was awarded to Greece and all Turkish territory on eastern Thrace to the Tchataldja line. At the conference of San Remo, the Turkish treaty was completed. The Greek representative M. Venizelos thereupon returned to Greece with the promise to occupy western

Thrace at once. Despite certain protests by the Bulgarians, the Greek army occupied western Thrace May 10th. There were various reports tending to show that the Greeks were not welcomed by the inhabitants. These were denied by the Greeks themselves, who maintained that the army was received with popular rejoicing, that its conduct had been exemplary and that they were received with favor even by the Turks, who preferred their rule to that of the Bulgarians. The Greek press subsequently published other articles indicating the good-will of the population toward Greek control.

ANGLO-FRENCH AGREEMENT IN THE NEAR EAST. An accord was reported in the press between the French and English governments in respect to their zones in the Near East on December 24. The limits between their two spheres were for the first time laid down in the treaty of May, 1916. After the armistice, negotiations between M. Clemenceau and Lloyd George resulted in certain modifications of these terms. France gave up her claim to the Mosul region in December, 1918 and agreed at the beginning of 1919 to international control of Palestine under a British mandate. It now remained to determine the limits of Syria and Palestine. The question was settled in London before the San Remo conference, but the Zionists, who had taken up their abode in Palestine with the approval of Great Britain, demanded certain changes in their own interest. In December these points were discussed between Lloyd George and the French Prime Minister, Leagues, in London and the final accord on December 24, according to the press, defined in detail the boundaries between the territories under French mandate, namely, Syria and Libanus, and those under British mandate, namely, Mesopotamia and Palestine. Other features were an arrangement between the two governments for the use in common of the line of railway between Lake Tiberias and Nasih; the use of the waters of the Upper Jordan and of the Diver Yarmouk and their branches for water power and irrigation in Palestine, subject to an examination by experts; the application in the interest of France of the agreement of San Remo in respect to petroleum; and the stipulation that Great Britain would not alienate the island of Cyprus without the consent of France. The result of the agreement was to increase the area of British Palestine at the expense of French Syria beyond the limits agreed upon in 1916, bringing at one point the frontier of Palestine to a distance of only about seventy-five kilometers from Damascus.

GREAT BRITAIN AND PERSIA. The agreement between the British and Persian governments has been noted in the preceding YEAR BOOK, which contains a summary of the document published on that occasion. In 1920 this agreement was the subject of increasing criticism on the part of the French. It was taken as explaining in part the more or less friendly attitude of Lloyd George toward the Russian Soviet government since he was afraid of Bolshevik encroachments in Asia. In England the press abounded in expressions of anxiety over the possible effect of Bolshevik propaganda on the vast populations under British rule which held to the Moslem faith. This anxiety did not arise merely from that which had happened in Mesopotamia but was occasioned by events in Persia as well. Un-

der the pressure of business men and especially certain leading financiers who sought to get possession of enormous petroleum deposits in Mesopotamia and Persia, Great Britain had pursued in Persia a dangerous policy. In the northwest of that country she maintained a small army which by the autumn of 1920 had been cut off from Bagdad. Its fate caused much anxiety at that time among the students of the eastern question. The Moscow government denied that it had any part in the attacks on Persia by certain Bolshevik detachments. It was pointed out by French writers that these denials were incredible; that the Russian government knew the sentiment of the Persian people in respect to England and took advantage of it on every occasion. Russian propaganda was believed to be behind the Egyptian revolution and it was supposed that the Bolsheviks were hoping for the same success in Asia. Lloyd George as a master-stroke had signed with the Persian government or rather had forced the Persian government to sign within less than a year after the armistice an agreement which practically turned Persia into a British protectorate. For the loan of £50,000,000 at 7%, Great Britain assured herself by the accord of August 9, 1919, of all that had any value or interest to her in the empire of Persia. The Persians did not protest because they no longer had any representative body to express a popular protest and because they were at England's mercy, but their irritation was profound and made itself known to all travelers by the hostility toward westerners generally. The present Shah accused of having sold out his country was said to be extremely unpopular. At any moment the discontent might take the form of an outbreak. The military operations in Mesopotamia had not yet resulted in the pacification of the country. The Persians were observing closely the course of events in Mesopotamia which was also watched with careful attention at Moscow. The Persian policy of England might therefore come to grief. This point of view was brought out in the French press and it was said that in acting as she had done England seemed to have, for once, failed in foresight and in political sense. Her policy was also criticised from this point of view by certain English papers, for instance, the London *Times* declared, "It is time that we should have a frank and plain explanation of our policy in Persia. So long as we do not know what our government plans in Persia its promises regarding Mesopotamia will not receive much credit."

CHINA AND JAPAN. During the early part of 1920, the Chinese boycott of Japanese goods continued and had a serious effect on the finances of the latter Power. Although the Chinese government was under the control of the pro-Japanese militarist party it was unable to stem the tide of hostile popular sentiment. The motives for China's refusal to negotiate over the question of Shantung were reported as follows: As a preliminary, China insisted that the Japanese government should cease to occupy Tsingtao, the Kiao-chow leased territory and the Tsingtao-Tsinan railway and should restore these properties to China. China would be then ready to form an agreement with the powers interested in trade with Shantung with a view to internationalizing the port of Tsingtao and its public utilities, China to have complete control of the

customs of the port and to re-purchase the German shares in the railway by means of an international loan. After the railway had passed into Chinese hands it could be incorporated in the Chinese railway system and its management then placed under international supervision. In Japan there seemed to be a resolute intention to negotiate, and repeated efforts were made to reopen the question with China. According to Mr. Thomas W. Lamont, who represented a group of American financiers who were negotiating along with British, French and Japanese groups with the Peking government for a loan of \$50,000,000 to China, the repudiation of the German issues of the Hukuan railway by China was an obstacle to further loans. Japan, he implied was ready to withdraw its reservations in regard to Manchuria and Mongolia. On May 7 the Japanese government officially announced this withdrawal. Thus these two provinces which had long been excluded came now within the operation of the consortium. See CHINA and JAPAN.

JAPAN AND THE OTHER POWERS. There was much said during 1920 about the alleged imperialist aims of Japan, not only in the United States, but in England, and on the Continent. The question of renewing the alliance between England and Japan was raised early in the year but was postponed on account of the anxiety that it caused not only in the United States but in the British dominions in the Far East. Twelve months' notice was required before the denunciation of the treaty according to the terms of Article 4. No such notice having been given, the treaty by its own terms was prolonged until July, 1922. As to the Japanese situation in 1920, it was pointed out by those who feared Japanese imperialist designs that their conduct throughout the war had been exclusively directed to the gaining of national advantage. Thus, while the war was going on she devoted a large part of her time to getting the upper hand in China, and the end of the war found her the sole foreign power in Siberia. The retention of Eastern Siberia would complete geographically a dominion of over 2,000,000 square kilometers with a population of 80,000,000, comprising besides eastern Siberia, Mongolia, Manchuria, and Shantung. In south Siberia alone, the cultivated area was estimated at 7,775,000 hectares. The Japanese also had recently seized that part of Sakhalien which hitherto had not belonged to them and Kamchatka as well as the island of Yap which was a desirable strategic base halfway between Australia and Japan, assuring Japan of the control of all the cables in that part of the Pacific. The ultimate aim of dominating Asia as the first step toward world conquest was charged against her by the extremists. The so-called Asiatic or yellow peril which had been an occasional feature of articles on foreign politics for many years became especially menacing in the magazines and newspapers in 1920.

JAPAN AND THE UNITED STATES. The real estate question in California (q.v.) which gave great offense to a certain element in Japan was a subject much discussed in the press in the latter part of the year. In Tokio the opinion of the press was that it seriously damaged the interest of Japanese residents in California. It placed serious restrictions upon them that were not found under the previous law, not only depriving them of the right to own or lease landed

property but even attacking rights already acquired. A former foreign minister in Japan characterized the policy as a virtual confiscation of the product of Japanese labor. Another prominent public man, president of the Japanese American Society, declared that it would sweep away in one day the friendship that had developed between the two countries in sixty-four years. Similar attacks on the measure were made by other Japanese notables. The House of Peers unanimously demanded a prompt settlement of this irritating problem, and called upon the government to assume a firm attitude toward the United States. Several workingmen's organizations took up the matter and decided to protest in regard to it to the workingmen of the United States. Efforts to call mass meetings were checked by the government in order to prevent unpleasant consequences. While in Japan it was recognized that the question of foreign property in California was partly a matter of internal public law in the United States, it was believed that Californian authorities, out of regard for good relations between the two countries, ought to consent to submission of the question to diplomatic discussion between Washington and Tokio. It was hoped at least, that some reasonable compromise might be reached, as another question likely to disturb the relations of the two countries was about to arise. This concerned the little island of Yap, in the Carolinas. In 1885 Germany had tried to take possession of it as a coaling station. Spain protested and Bismark offered to submit the question to the arbitration of the Pope. The latter decided in the favor of Spain. After the Spanish-American war, the Spanish government sold the Carolina Islands to Germany and in the course of the late war they fell into the hands of the Japanese. Various agreements in 1917 between Japan and the Allies stipulated that the islands lying to the south of the equator should be included in the sphere of British interests, while those to the north should fall within the sphere of Japanese interests. This arrangement subject to a restriction in respect to mandates under the provision of the League of Nations was confirmed by the Supreme Council, May 7, 1919. In 1920 at the instance of the American national authorities the Washington government brought this decision into question. The island of Yap had become the terminus of several Transatlantic cables and it would constitute for the United States a valuable naval base on the route to the Philippines. Hence, the American government wished Japan to consent to an arrangement of some sort to that end. The irritation of Japanese sentiment was likely to prevent such a concession.

In November according to a Japanese authority, there was no quarrel over the question of immigration which had been settled by an arrangement involving the prohibition by Japan of the entry of Japanese laborers into this country. He said that the government had consistently pursued a fair policy in the matter and that this had been fully appreciated in Japan. Japan's extraordinary growth in population had brought her into the same class as Holland, that is to say a density of 376 per square mile. The question of overflow, was therefore most important. He characterized the California land bill as unwise and futile for if it succeeded in driving

out Japanese farmers, California would be deprived of a considerable part of her agricultural products and would thus face an increase in the cost of living. Moreover the law was useless because it might be evaded by various legal subterfuges. The Californians by means of repression and persecution were thus driving the Japanese into the position of law-breakers or hypocrites, to say nothing of the feeling of hostility that this course occasioned. The exclusion law would add to the humiliation of Japan and the movement in favor of depriving the Japanese American born of the right of citizenship was plainly a reactionary course. See JAPAN.

THE VATICAN. Much was written during 1920 in regard to the growing power of the Vatican in international politics, by far the most conspicuous feature of the new tendency being the reconciliation with France. By November diplomatic relations between France and the Vatican were in a fair way toward resumption. This was a complete reversal of French policy, which for two generations had been anti-clerical. It was explained, so far as France was concerned, by the practical needs of the hour, and in spite of the bitter feeling on the subject in the past, there was no general opposition to it. The Catholics were supreme in middle Europe and French policy in middle Europe required the means of coming to terms with them. France as represented by its press and government was anti-Bolshevist and the Catholic element in France was the stronghold of anti-Bolshevism. Some of the ablest French writers during the year instead of denying the charge that France was reactionary in her policy after the war, admitted it and gloried in it, saying that France stood as a great conservative force in Europe—that it was the centre of resistance and counter-revolution, and that, especially, it was the bulwark against Bolshevism and other dangerous forms of radical politics. France appeared to have become more anti-Bolshevist than she had been in 1919. For example, M. Clemenceau had signed an offer to feed Russia, but M. Millerand, had such a point come up in 1920, would certainly have taken a different stand. France in her anti-Bolshevist endeavors was trying to form a ring of states around Russia. Now in this the importance of Catholicism could not be over estimated. To present French policy, the good will of the Catholic elements in central Europe was indispensable. In Germany for instance, unity could well be prevented, and French aims realized, by the separation of the Catholic element in the South, and its alignment with the Catholic population of Austria. In short the various schemes of the dominant French political groups of 1920 intent upon the crushing of German power in the future by the prevention of German solidarity could best be realized by an accord with Catholicism. M. Maurice Barrès, a conspicuous representative of Catholicism and of a certain type of chauvinism, advocated the detachment of the Catholic states from Germany, though not their annexation to France. The French Ministry in 1920 sent representatives to Catholic ceremonies which a few years ago would have been officially ignored. The return of the two strongly Catholic provinces, Alsace and Lorraine, added to the many influences tending to revive Catholicism in France. Popular imag-

ination in France was much struck by the sanctification of Joan of Arc at Rome, and the public ceremonies and processions which followed in France tended to promote friendship for the Vatican. A report made to the French government by a committee of the Chamber of Deputies after considering this question of resuming relations with the Vatican, favored the immediate appointment of a regular ambassador to be followed within a year by the sending of a Nuncio to Paris, when the two governments should have come to agreement in regard to the choice of the person. France should continue her policy in the Near East of protecting Catholics, but in return must demand recognition by the Church of French official representatives there. France desired peace in Europe, and the high moral power of the Pope is exerted toward the same end. The resumption of relations, it was said, was necessary in order to coöperate for this purpose. It was not proposed that modification of present French legislation should result from the resumption of relations.

BOLSHEVISM IN THE LOW COUNTRIES. In Belgium during the first part of the year not much was heard of the danger of extreme radicalism. The Socialists had lost several seats in the by-elections. In Holland on the other hand there was much alarm over the danger from foreign agitators and it was believed that a number of strikes had been ordered by the International Communist bureau at Antwerp under instructions from Lenin. Holland tried to keep out foreign agitators by establishing a zone at her frontiers beyond which no one might pass except along specified lines on penalty of being shot. An anti-revolutionary bill was introduced June 2, which went further than the prevention of outward acts of violence and aimed at moderate Socialists as well as Communists. The Socialist party condemned this as a departure from Dutch precedent. Its introduction was followed by riots and strikes and there was some fighting in the streets of The Hague between the police and the rioters.

BELGIUM AND HOLLAND. A sharp difference of opinion showed itself in the early summer between Belgium and Holland in respect to access to the sea by way of the Scheldt and checked the progress of the treaty between the two countries which was reaching its final stage (May 26). On May 3, the Dutch presented a note to the Belgian government demanding exclusive jurisdiction over the Wieleingen channel which is the largest of the three passable channels of the Scheldt below the city of Flushing. Thereupon Belgium broke off the negotiations and referred the subject to the Chamber of Deputies which approved their action on May 26.

FRANCE AND BELGIUM. A military convention was concluded in the autumn between France and Belgium. It was generally applauded in both countries as a necessary measure of precaution against a new war on the part of Germany. Many pointed out that if such an arrangement had existed before the late war it would have prevented the great disasters that marked that war's beginning.

ITALY AND RUSSIA. An illustration of the attitude of the Italian government toward Russia is offered by the following incident: In September a committee of the Socialist group

in parliament waited upon the foreign minister Count Sforza and asked him directly when the Italian government intended to renew commercial relations with the Soviet government of Russia. The foreign minister replied that in the spirit of the government's declarations in parliament relations with Russia would be resumed as soon as possible, first, commercial relations and then diplomatic relations; that is to say, they would be resumed as soon as the conflict between the Poles and the Bolsheviks was ended. He added that the Bolshevik representative Woroski whom he characterized as a man of genius and a moderate Bolshevik would have been received as the representative of the Soviets with great cordiality in Italy but that unfortunately it had been learned that owing to illness he could not undertake the Italian mission and in his place had been nominated M. Litvinoff. The foreign minister declared that he had been unable to accept the nomination of M. Litvinoff, the Supreme Council at San Remo not having authorized the latter to enter any Allied state. The Socialist deputies called the foreign minister's attention to the attitude of France toward the Soviet government and to the nomination by that country of a delegate to General Wrangel. As for their own country they insisted upon the necessity of following a policy of pacification and friendship toward Russia. The minister declared that Italy had taken the lead of the other countries in this direction, having concluded, for example, the agreement of Copenhagen for the exchange of prisoners and having admitted a Russian steamship loaded with wheat. As soon as the Russo-Polish conflict was ended an agreement would be made with the Soviet government for a merchant marine service between Italy and the port of Odessa.

FRANCE AND THE REPARATIONS. The French papers professed an inability to understand the attitude of their Allies in the matter of reparations. They argued that a complete agreement had been reached by the Allies on the articles of the Treaty after long and serious discussions. Why then should there be any question of the execution of these articles? France naturally asked whether Germany was to make good the damage that she had deliberately inflicted on France. The Allies seemed to bring this point into question. Were the Allies intending to pass over the 33,000,000,000 francs that France had already advanced to the Germans for the reparations, and all the other billions that it would still be necessary to find before the victims of German barbarism were indemnified? The French could not understand according to their newspapers. Why their Allies showed this excessive mildness toward Germany. The money question was important but still more important for the future was the subsistence of good-will between France and her Allies. If a secret hostility developed between them, the peace of the world would soon be broken. It was time to appeal to the opinion of the peoples on this subject. England had emerged from the war greatly increased in power. She was in the largest degree responsible for holding Germany to her word. Now if the old policy of England which aimed at keeping the Continent in a state of weakness and preventing France from becoming a strong nation should be carried out it would lead to disaster. Probably that

policy was not approved by the majority of the English people. Things had changed since Napoleon's time and France had become the least imperialistic and the most pacific of the nations. She had shown her good-will liberally toward England in not interfering in any way with British interests or even British ambitions. England had taken everything she wished in Africa and in Asia without any opposition on the part of France. England had acquired enormous booty and France had consented to everything, even to paying, by the convention of Spa, a price for coal that was very profitable to her. France had shown in this instance and in many others her willingness to sacrifice herself in order to live on cordial terms with England. But in the matter of the reparations the very existence of France was at stake and France could not accept demands that would tend to her ruin. The friendship of France and England was the sole effective safeguard of peace. It should be remembered that after all France was the chief victim of the war. Why should the reparations which had been agreed upon and which should be recognized as legitimate be called into question? It behooved the English people to reassure France in regard to England's intentions. A serious misunderstanding had arisen and it should be removed as soon as possible. France had acted with good-will and unselfishness when English interests had been involved. Now it was a question of the essential interest of France which required merely the respect for obligations deliberately incurred and based on the most elementary justice. France appealed to the British people to recognize her right. It would be dangerous for the British as well as for the French if the former should cease to cooperate with France because in that case France would have to insist that Germany pay her debt and in the event of a refusal would have to go and take the money wherever she could find it.

The French argument in respect to the financial condition of Germany as compared with that of France appealed to a report on that subject which had been submitted to the League of the Nations. From the figures supplied in that report it seemed that the percentages of receipts to expenditures in the budgets for 1920 for Germany, France, Belgium and Italy were as follows: 53.5% Germany; France, 44.6%; Belgium 42.8%; Italy 42.5%. The only budgets that showed no deficit were those of Great Britain and Czecho-Slovakia, all the other countries of the Allied and associated Powers showing a deficit. The deficit of France as shown by the above figures was 10% higher than that of Germany. The following figures showing the per capita revenue expenses of France and Germany were cited: France, internal revenue per capita \$265; Germany, \$103. France per capita expenses \$108; Germany, \$23; thus the comparative percentages were France, 40% and Germany 23%, the excess of internal revenue over expenses being therefore, 17% higher in Germany than in France. Finally as to the burden of taxation: The debt in 1913 in France was 33,000,000,000 francs or 868 francs per capita and in Germany 5,000,000,000 marks or 83 marks per capita. The debt in 1920 in France was 219,000,000,000 or 5,773 francs per capita and in Germany 197,000,000,000 marks or 3,346 per capita. From this the French argued that if the respective countries applied all their

annual resources to the payment of their debts. the German empire would require seven years to extinguish its debts, while France would require ten years. Hence, it was argued that Germany showed bad faith in her outcry of poverty. She had suffered less than France and it was inadmissible that the League of Nations founded on the principles of right and justice should maintain a policy which injured France in the interest of a criminal and conquered Germany. Moreover, the bad faith of the Germans was shown by the frequent threats on the part of the press and German public men, that they would never execute the Treaty. The reactionary element in Germany had declared that its execution was illegal because Germany had been compelled to sign it. Much had been published in Germany to the effect that the Germans were not bound by any engagement in respect to it. The Pan-German press was constantly exciting the people to thoughts of revenge. As illustrations of German sentiment many intemperate articles from the German press were shown, including one in which German conditions of the present time were likened to those after the peace of Tilsit. Just as it required only six years after the defeat of Prussia for her to regain her power in the great battle at Leipzig, so the recuperation and vengeance of Germany would not require a long interval now. It was hinted in various articles that the limitation of Germany's military force need not prevent military preparations; that the training of troops could go on clandestinely and an army might be prepared, for example, under the guise of a police force.

Many items appeared in the French press, illustrating the hostility of Germany to France. It was said in November that an anti-French campaign had been long carried on in order to stir up the people. An incident described as serious was reported in French dispatches. According to these a member of the French consulate at Hamburg was attacked on the street and wounded. The consul-general of France demanded retribution and this demand was supported by the French ambassador at Berlin. Publication of this incident led to a summing up of French grievances against Germany. It was said that it would be a mistake to assume that Germany was ready to execute the Treaty in good faith. An affair similar to that at Hamburg had occurred at Breslau and it was a question whether the French representatives were safe in the German empire and whether France ought not to take extraordinary measures to protect them. The punishment of the offenders in the affair at Breslau had evidently had no deterrent effect upon the population of Hamburg. There was plainly an outbreak of hatred against France as well as a systematic campaign against the Treaty and this was not only the work of Pan-Germans and irresponsible politicians; the ministers themselves employed intemperate language and prominent financiers took part in the campaign of hate. When Helfferich had predicted an early revenge, he was applauded by the crowd. Evidently the people were regaining their courage and the period of depression which had succeeded the defeat had come to an end; the Germans were realizing that their country was the most populous and the best organized in central and eastern Europe. At the Nationalist Congress, a speaker had declared that the German people would have a third revival of youth and

that the new empire would be stronger than in the days of Bismarck, in that it would include all the countries of the German race, eighty millions including those of Austria and Bohemia, which would constitute a powerful bloc to the 40,000,000 of Frenchmen. The French declared that this idea was stimulating Germany. Again it was believed there that France alone desired the complete execution of the Treaty. Acts counted and not words. The official declarations of the allied governments might be in agreement in respect to the necessity of enforcing the Treaty, but when the Germans saw that the discussions at Paris and London on the subject of reparations lasted a month before an agreement was reached they naturally concluded that the harmony between France and England was more apparent than real. And when they saw the British Government in the interest of British trade accept an arrangement that departed widely from the Treaty and renounced the punishment provided in case of failure to execute its provisions, the Germans had a still stronger reason to believe that France stood alone. This concession of England according to the French commentators placed a premium on German resistance. Germany was constantly hoping that the allies would fall out.

ATTITUDE OF FRANCE. The year closed with a strong feeling on the part of many French publicists that the efforts to secure the execution of the Treaty throughout the year had failed. Marshal Foch presented his report on German disarmament to the Allied ambassadors, December 31. He declared that Germany had not fulfilled her obligations either under the Treaty or under the Spa agreement. Although the German government had reduced the regular army to 100,000 as required and had dismantled all the fortresses that she had promised to dismantle, she had not kept faith in the matter of disarmament of the militia and the home guard organizations. He pointed to Germany's refusal a week before to disarm the home guards of Eastern Prussia and Bavaria. This, according to many French writers, was an open and direct violation of the agreement of Spa, and the Allies would therefore be justified in occupying the Ruhr valley. As to the general attitude of Germany toward the Treaty, M. Poincaré was winning much applause in certain quarters by his complaint of laxity on the part of France and her Allies in the matter of holding Germany to her promises. At the close of the year, he spoke of the twelve wasted months that had preceded. The Allies had been too good-natured and Germany had always taken advantage of them. When the treaty provisions were disregarded the Allies ought at least to have insisted upon the more indulgent terms of the Spa conference. Now, Germany was violating even the Spa terms. In spite of all the talk about disarmament, and in spite of the real desire of France to see the terms of military service shortened, it was impossible to disarm if Germany were left free to prepare new attacks under cover of the darkness. So long as Germany did not disarm, there could not be general disarmament. This had been clearly understood, and had been proclaimed at all the conferences, but the Allies had listened to the complaints of Germany and made concessions. Germany continued to ask further concessions. Hardly had the articles of peace been signed, including the one

that provided for the reduction of the German army to 100,000 men and the other that said the police forces must not be greater than in 1913, except in proportion to increased population than ingenious organizations sprang up in Germany for police, gendarmes, and civic guards which were merely military forces in disguise. According to reports published at the same time in Berlin, the army had been reduced to 90,000 men and the armed police force was below the limit required. On the other hand, it appeared that the civilian guard numbered hundreds of thousands. Although it had outwardly ceased to exist in Prussia, it was secretly maintained under various forms, such as clubs and sporting societies, and in Bavaria it was recruited in defiance of the Allies. In Germany, there was much protest against the reduction of the forces on the ground that Germany would thus be deprived of the defense against the Bolsheviks.

ANGLO-FRENCH FRICTION. During the closing months of 1920 the press of all the Allied countries gave much space to discussion of the differences in policy between France and Great Britain. The cardinal points concerned their attitude toward the Russian Soviet government and toward Poland. The French point of view may be briefly summed up as follows: England, after 40 years of a more or less hostile policy toward France, as was indicated by the incident of Fashoda in 1898 and many other circumstances formed with her in 1904 the famous Entente Cordiale at a time when Great Britain felt herself in danger by the world policy of the Emperor William. On the outbreak of the war this understanding was transformed into a war alliance which in turn became at the end of the war an alliance for peace. Now, it was generally admitted that the war had practically ruined France and that peace had especially enriched the British Empire. Again it was also certain that a thorough understanding between France and Great Britain would suffice for the maintenance of permanent peace in Europe whether with or without a League of Nations or the United States or Russia. But it seemed inevitable that a British government on becoming more and more powerful and free from the maritime and colonial competition of Germany would tend to contravene certain interests of France. After 1916, in spite of the war alliance, the British Empire without the knowledge of the French had entered into a long series of arrangements profitable to it and injurious to France. Under Lloyd George this policy had been carried to its furthest limit and had become actually hostile. For example, English munitions were supplied to the rebels of Cilicia; English instigation roused Feisal against France; English plots sacrificed Poland whose welfare was necessary to French security; English pretensions reduced the just compensation; and English capital worked against France in Silesia. Then as to Bolshevism which was a flat denial of right, of good sense, and of civilization, Lloyd George by an obscure understanding and through the influence of Jewish financiers had attached himself to the Soviet Government. The French government had positive and detailed information in respect to this relation. For example, Great Britain had promised Judenitch to support him on the left flank by occupying Kronstadt and a part of the coast but she had evacuated all these positions at the approach of the

Reds. Thus Poland was left exposed, Judenitch was beaten and Lenin was saved.

As to the United States, experience had shown that no reliance was to be placed upon permanent support from that quarter because American diplomacy depended too much on mere internal party rivalries. Nor could Great Britain be regarded in the long run as a permanent force. The very existence of the British Empire was at present in question. It was at least reasonable to consider the possibility of its decay during the next 50 years. The French so-called empire, on the other hand, was not threatened. So long as the French should hold the Rhine, which they had a right to do alone, so long as Eastern Europe should be closed to the Soviets, which could be insured in part by French action against Berlin, Germany would grumble but would not dare to stir. Association with England on the Rhine and in Poland would hamper French efforts whereas an understanding with Belgium, Luxembourg and Spain together with a progressive development of French economic resources and her military strength might bring results more satisfactory and less costly. At all events the interest of France must come first and not a fantastic notion based on British pretensions. The course of Millerand was based on these realistic views. It implied that France ought to follow a distinctly French policy and oppose any anti-French tendency no matter what its origin. In short, events since 1916 had shown that it was not possible for France to bind herself by a policy of common interest with Great Britain. The only agreement possible would be one that consisted of specific understandings formed from time to time in relation to the definite purposes that developed. To be sure, nothing should permit the possibility of misunderstanding with Great Britain. The policy of Lloyd George appeared to lack good will. Nevertheless a nation of 90,000,000 inhabitants disposing of an immense colonial empire having rich deposits of iron and other minerals could certainly resist every anti-French policy in Europe from whatever source it came. It was safe to say to the British Premier that France had had enough of concessions and that she intended to apply the treaty of Versailles with the English if they wished but without them if their selfishness obliged her to do so. This was the policy of M. Millerand as interpreted by a considerable body of French opinion and to it was attributed his diplomatic victories over Great Britain.

The above summary is a fair example of the attitude of many prominent French publicists and doubtless represented the point of view of the class that dominated French policy after the close of the war. That it did not represent several important elements in French society was evident but for some reason their criticisms were not generally cited in the American Press.

A part of the British press carried on a systematic campaign against the policy of the French government. In the first place it insisted upon a reconciliation with Germany. It published articles indicating that France aimed at the economic destruction of Germany and that France was embarked on an imperialistic career that was the most audacious that had been known since the excesses of Pan-Germanism. It declared that Europe was covered with French military missions; that Poland had been ruined

as a result of French encouragement; that peace had been made impossible in Russia by French support of Wrangel; that Hungary had become a French military outpost; and that as a result of the Franco-Belgium agreement, the safety of England was in danger in that quarter. The French replied to this that French imperialism was an invention of German mendacity; that instead of having driven Poland to ruin, France had saved the people in their moment of peril from being crushed by Russia and Germany for if France had not aided the Poles in their resistance, the Red armies would have occupied Warsaw. France had saved western Europe at that crisis, for with Warsaw once under Red control, Bolshevism would penetrate throughout all Europe. In recognizing the government of Wrangel, France was following the only reasonable attitude for nations that wished international relations to be based on right. If Bolshevik Russia were not checked, the most elementary principles of civilization would cease to be respected in the dealings between nations. As to Hungary, the alleged motives of French diplomacy in Hungary had been formally denied and as to the Franco-Belgian agreement its purely defensive character had been proclaimed by both parties to it. It was formed in order to withstand in the future any new aggression. Nor was it the fault of either France or Belgium, that England had not been willing to take part in the measures undertaken by France and Belgium for the common defense of the west against such attacks as those of 1914. These criticisms of France were all dismissed by the French press as part of a systematic campaign against her, falsely based on desire for peace, while actually tending to compromise peace measures that had been taken. In a British paper renunciation by the British government of its rights to seize the property of Germans was defended and it declared that France in occupying Frankfurt, recognizing Wrangel and pursuing her Polish policy, had taken a menacing attitude. It also said that after the conference at Spa it had violated both the letter and the spirit of the agreement reached at San Remo. The paper went on to say that the Entente would break up at an early date and possibly before Christmas for if France assumed the right to act according to her own inclinations, she could not refuse the same right to England. These points are quoted simply to indicate that in both countries strong efforts were being made by certain elements to stir up hostilities between the two governments. Eminent publicists, especially in France, expressed extreme views. For example, the makers of the Treaty according to Lauzanne were eternally disgraced because there had not been included penalties insuring the execution of the terms and M. Millerand deserved everlasting credit for his attempt to complete it in this respect. It was absurd that a Treaty should contain 222 pages of demands and only a page and a half on the measures for the enforcement of those demands. French policy was at present engaged in creating the necessary sanctions. At the convention of Spa it had created a sanction in respect to coal and the result was that Germany delivered the coal. That is what sanctions meant and they had been completely forgotten in the Treaty. It remained to be seen what penalties would be agreed upon in the approaching meetings at Brussels and Geneva for the failure to

keep the financial terms. The Germans would pay if they knew that in case of non-payment certain measures would be taken against them such as the occupation of Essen, the seizure of the customs, etc. In other words if the Allies should proceed in the matter of financial reparations as they had proceeded at Spa in respect to coal, France would secure some portion of the booty, but if they proceeded as they did at Versailles and only made phrases, France would get nothing more than a shadow.

GREAT BRITAIN AND GERMANY. Liberal opinion in England was distinctly in favor of the programme of restoration and reconciliation for Germany. In more or less conservative quarters there was a disposition to agree that it was to the best interest of the Allies to follow a moderate course in the matter of indemnity. It was clear that the French and British should stand together and it was also clear that the terms of the Treaty should be enforced. Although Mr. Lloyd George had frequently changed his mind in domestic politics his course in this matter was generally regarded as consistent. While the French showed a preference for military means in insuring the Treaty, Lloyd George and the Italian prime minister believed in methods of diplomacy, and had worked out plans, for the adjustment of differences with Germany by peaceful means. In the matter of the coal question the Allies pointed out to Germany that she had failed to comply in regard to disarmament and in regard to the reparations generally, and at the conference of San Remo they framed this declaration and included in it the statement that the Allies did not ignore the difficulties with which the German government are faced and did not intend to insist upon the literal interpretation of the Treaty. Furthermore they invited the head of the German government to confer directly with the heads of the Allied cabinets. Mr. Lloyd George had been behind this policy and in inducing the French minister to meet the German minister he had done much toward restoring normal relations. Moderate British opinion argued that after all the war had ended and Germany had signed the Treaty. They urged her inability to carry it out literally and punctually. The British government was willing to examine that plea and see what could be done. As to the indemnity so long as the amount was left indefinite, Germany had an excuse for saying that she did not know what to do about it. The Allies for their own sake would do well to fix the amount definitely as soon as possible. Germany could adjust her internal conditions to meet this necessity. Generosity in the treatment of a vanquished enemy was not in the long run unprofitable to the conquerors. The above comment fairly represents moderate British opinion as indicated in the press at the time of the San Remo conference in May, and in general the same spirit continued throughout the year.

In December, 1919 a White paper was published saying that the money due to or the property acquired by the Germans as a result of transactions following the authorized resumption of commercial relations were not subject to sequestration in England. On October 8, 1920 the British embassy at Berlin repeated this engagement and reassured the Germans that from that moment the only thing

demanded of them would be to make an honest effort to pay their debts. In that case complete immunity was assured them in respect to their deposits in bank or their goods in Great Britain. On October 21, the Board of Trade published the information that the government of Great Britain had informed the German government that it had no intention of exercising the right conferred upon it by paragraph 18, Annex II of the eighth part of the Treaty, to seize the property of Germans who left the United Kingdom, in case of voluntary violation of these obligations by Germany. In France this policy was condemned as encouraging the Germans to resistance in the matter of indemnity. It was pointed out that the German press was saying that German commerce was not in any danger. On the occasion of the fair at Frankfort, purchasers came to Germany from all countries and during the months of April and May the excess of exports was very considerable. For months Germany had ceased to publish statistics of products and exports. Finally the government decided to publish statistics for the whole of 1915 and the first five months of 1920. These showed the excess of exports in April to have been 576,000,000 marks and for May, 1,100,000,000 marks. According to French commentators, this proved that Germany was in a position to pay her debts. Indeed, some of the German newspapers condemned the government for publishing these figures on the ground that it played into the hands of those who wished to press for payment.

OCCUPATION OF THE RHINE. In the autumn several German newspapers conducted a campaign in regard to the cost of the army of occupation on the right bank of the Rhine, with a view to relieving Germany of part of the burden. The French Finance Minister in the autumn published figures showing the expenses that France was obliged to pay. The total contribution to the support of the army of occupation on the part of France amounted to 1,800,000,000 francs. The installments paid by Germany for reimbursement amounted on July 31, only to 402,813 francs. Certain German papers however, added to this figure very large sums spent by the German government for indemnification of its own people on account of requisitions, etc., resulting from the occupation. Many instances of French requisitions were cited by these German papers, notably at Kaiserslautern, with a view to proving that the French occupation was an intolerable burden upon German finances. There was no opportunity during the year of determining the right of this matter, since the German charges as published in the press were not accompanied by proof and since the answer of the French was simply a flat denial, also unaccompanied by convincing information.

FRENCH-ITALIAN FRICTION. In spite of the interview between the French and Italian premiers at Aix-les-Bains, there was much criticism of French policy on the part of the Italian press. In general the French Russian policy was condemned and there was a tendency to insist on easier terms for Germany. Moreover, the so-called Little Entente among the Balkan states was approved by the Italians as a check on the French designs. In France this criticism was attributed to Italy's disappointment in the terms of peace and to the serious economic crisis that

she was undergoing. In spite of the overthrow of her hereditary enemy, Italy was much dissatisfied with what the peace had brought her. Moreover, there was a political crisis resulting from the acknowledged necessity of modifying and simplifying organs of administration, financial methods and the electoral system. Then the economic crisis, due in the first instance to the disorganization of the ratio of production to consumption, to the lack of agricultural resources and to the failure of raw materials for manufacture, which was all the more serious as the result of lack of means of transport and the reduction of emigration. Finally there was the enormous increase in the cost of living. These elements which had marked the history of the year 1919 had given impetus to the more radical movements and the Chamber elected November 16, 1919 was a distinctly radical body. The dominance of this class did not tend to cordial relations with countries in which, like France, the more conservative classes were in control. But while the French attributed the Italian attacks upon them to these causes in part, they saw no reason for the violence of these attacks and did not admit their justification. The main grievances against France according to Italian writers were, in the first place, that France had emerged from the war enormously rich. She controlled in Europe the iron market and the market of chemical fats and to a certain extent the market for colonial raw material on account of her territorial gains in Africa. Italian industry in effect depended upon the good will of France. The French had occupied the coal fields of the Saar from which they granted to Italy only a small proportion and they would not relinquish the mines of Heraclea in Asia Minor. French policy paralyzed Italian industrial activity and deliberately drove Italy toward anarchy and ruin. A contrast was drawn between the new wealth of France resulting from the war and the poverty of Italy which was the direct result of French policy. To these attacks French writers replied that if they did not furnish cast-iron and steel to Italy it was because they required them in the reorganization of their own metal industries. Many of the French blast furnaces in fact could not operate on account of the lack of coke. France had the first claim naturally on her own products in order that she might bring the balance of trade in her favor. The restrictions on the exportation of phosphates, for example, were due to internal needs and to the difficulties of transportation. As to coal, it should be remembered that the coal fields in the north of France had been made unproductive for a long time to come by the Germans and the output was by no means equal to the needs. Instead of monopolizing the Heracleian basin, France as a matter of fact had granted Italy a right to take part in its exploitation. Moreover, France had sent a delegate to Rome to facilitate direct purchase by the Italians in her African colonies. The charge that France wanted to cause a social revolution in Italy by unemployment and famine would not bear examination. Moreover, in most cases commercial relations between the two countries were not under government control but pertained directly to the industrial groups concerned. The agreement at Turin, May 30, 1917, permitted Italian merchants and

manufacturers to export into France goods to the value of a billion francs although French producers had sent to Italy goods to the value of only some hundreds of millions. France was thus the best customer of Italy and had contributed toward the lowering of her rate of exchange. Again France had foregone 3 % of the German indemnity in favor of Italy. In these circumstances Italian criticism seemed unreasonable to the French. It continued, however, without abatement during the year.

ITALY AND GERMANY. Anxiety was expressed in certain French quarters lest Germany and Italy should be drawn together in a commercial alliance and there was much talk about the intention of Germany to secure economic control over Italy. An interview with the German ambassador of Italy published in November presented some of the points from the official German point of view. Germany, according to the ambassador had no desire to penetrate the economic life of Italy, but only to cooperate with it. But the question in Germany was how to reconstitute her own economic life, and she was obliged to think of her own obligations—the delivery of great quantities of coal and the payment of her indemnities. The peace conditions had deprived Germany of the very basis of her industries. Germany to-day was a totally different country from what she had been. She was poor in all raw materials and in money. The work of economic penetration in Italy or in any other country was impossible to her, even if she wished to engage in it. Germany knew very well that such a policy would be ruinous.

Many Germans began to return to Italy after the armistice and their number was said to be increasing in 1920. Among them were persons prominent in industry, commerce and finance, also Church dignitaries, aristocrats and many persons of the middle class. The newspapers referred to this influx of German pilgrims and in the French press it was regarded with suspicion as indicating a pro-German tendency on the part of the Italians. The Germans were very numerous in the north, especially in Milan and Genoa. Writers and journalists were said to form the largest element. Moreover all were received by the Italians as if nothing unpleasant had occurred, and although at first many of them had passed themselves off as Swiss they now took pride in declaring themselves Germans. Certain Italian papers expressed some concern over this immigration and warned the public against a design on the part of the German government to repeat her past error and endeavor to invade anew the industries in Italy. In certain quarters the fear was expressed that in a few years the Italian market would again be flooded by German goods. At present a large number of commercial travelers were seen displaying their wares in Italian streets. Meanwhile they were not neglecting the political side and were constantly carrying on propaganda in favor of Germany. One Italian newspaper declared that the merchandise offered by Germany was not only of a better quality than the Italian, but was delivered under very advantageous conditions as compared with that offered by the French and English, the Germans accepting easy terms of payment. A large credit establishment at Rome announced in the autumn that two German

bankers had been called to direct a branch which had been opened. It was feared by some that the time was not far distant when Italian finance would be under German domination. It was significant that Germans were already placed at the head of an important Italian bank.

WARRE, EDMOND. Former headmaster of Eton College, England, died at Eton, January, 22. He was born Feb. 12, 1837; studied at Eton; graduated at Oxford with honors; became assistant master at Eton in 1860; was elected headmaster in 1884, and held that office till his resignation in July 1905. He was celebrated for his extraordinary memory which enabled him to quote with ease from classic authors on almost any subject. As an administrator he was autocratic but kindly and he made an especial effort to develop public spirit among his pupils.

WASHINGTON, D. C. See CITY PLANNING.

WASHINGTON. POPULATION. According to the preliminary report of the census of 1920, there were 1,356,621 residents in the State January 1, 1920, as compared with 1,141,990 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 66,288, an increase of 18.0 per cent since 1910. The following table was compiled from the estimates of the United States Department of Agriculture for the years, 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	78,000	2,808,000	\$3,510,000
	1919	78,000	2,808,000	5,195,000
Oats	1920	823,000	15,052,000	10,837,000
	1919	824,000	12,960,000	12,053,000
Barley	1920	110,000	3,883,000	3,883,000
	1919	117,000	3,510,000	4,738,000
Wheat	1920	2,329,000	37,982,000	51,276,000
	1919	2,441,000	39,305,000	84,113,000
Hay	1920	844,000	1,659,000	30,360,000
	1919	845,000	1,986,000	45,468,000
Potatoes	1920	56,000	8,680,000	8,246,000
	1919	58,000	7,250,000	10,512,000

^c Tons.

MINERAL PRODUCTION. The value of the gold, silver, copper, lead, and zinc produced from mines in Washington in 1920, according to the estimate of the United States Geological Survey, was about \$1,193,000, an increase of \$224,039 over that in 1919. The decrease in the value of the gold and silver was more than offset by the increase in that of the copper, lead, and zinc. The output of copper from the Chewelah district, Stevens County, was slightly less, but there was an increase in the output from Snohomish County. Most of the ores except those of lead and zinc were smelted at Tacoma, Wash. The mine production of gold decreased from \$252,862 in 1919 to about \$142,000 in 1920, a decrease of nearly 44 per cent. Nearly all the gold came from the Republic district, where the shipments of ore were comparatively few. From this district approximately 10,200 tons of siliceous ore was shipped during the year, as compared with 25,537 tons in 1919. The mine output of silver decreased from 259,384 ounces in 1919 to about 193,000 ounces in 1920. The value of the output decreased from \$290,510 to about \$210,000. Most of the silver was obtained from copper ores and from ores mined in the Republic district. No silver ores were either shipped or treated. The mine output of copper increased from 1,676,576 pounds in 1919 to about 2,394,000 pounds in 1920, and the value of the output increased from

311,843 to \$409,000. The mine output of lead increased from 2,146,157 pounds in 1919 to about 5,079,000 pounds in 1920, and the value from \$113,746 to about \$415,000. Most of the product came from the Electric Point property near Northport, in Stevens County, the shipments from which were greatly increased. In the same district much lead ore was opened in the Gladstone mine, from which several shipments were made during the year. Several hundred tons of zinc ore were shipped from the Northport district in 1920. No large output of zinc ore had been made since 1917.

FINANCE. The Treasurer's statement for the biennium ending September 30, 1920 was as follows: Balance on hand, Oct. 1, 1918, \$5,370,697; gross receipts during biennium, \$43,240,707; gross disbursements, \$42,953,825; balance on hand, September 30, 1920, \$5,657,579.

EDUCATION. For the year ending June 30, 1919, 272,325 pupils were enrolled, the average daily attendance was 197,595, and the number of teachers employed 9,770. The total enrolled in high schools was 37,317 and the number of teachers 1,612. See **EDUCATION IN THE UNITED STATES**.

TRANSPORTATION. Of steam trackage the Northern Pacific maintains 2,966 miles, the Great Northern 1,798 miles, the Chicago, Milwaukee & St. Paul 1,138 miles, the Oregon-Washington Railroad and Navigation Company, or Union Pacific, 1,133 miles, and the Spokane, Portland & Seattle 512.41 miles.

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 223,137; Cox (Democrat), 84,298; Christensen (Farmer-Labor), 77,246; as compared with the following vote in the presidential election of 1916: Wilson (Democrat), 183,388; Hughes (Republican), 167,208; Benson (Socialist), 22,800. The vote for governor was: Hart (Republican), 210,622; Bridges (Farmer-Labor), 121,371; Black (Democrat), 66,079; and for United States Senator: Jones (Republican), 217,069; France (Farmer-Labor), 99,309; Cotterill (Democrat), 68,488.

WASHINGTON, UNIVERSITY OF. A co-educational State institution at Seattle, Washington, founded in 1861. The enrollment for the summer session of 1920 (first term) was 1506, and for the regular fall session, 5191. There were 275 members of the faculty. The income for the year ending June 30, 1920 was: State appropriations \$1,133,978; local fees and tuitions \$464,917; Federal \$7746; other income \$46,880; total \$1,653,521. The library contained 120,530 volumes and 547 periodicals. The Philosophy Hall was completed at a cost of \$366,000. President, Henry Suzzallo, Ph.D., LL.D.

WASHINGTON AND JEFFERSON COLLEGE. A non-sectarian institution of higher learning, at Washington, Pa., founded in 1802. The enrollment for the summer session was 97 and for the regular fall session 408. The faculty numbered 22, including 2 new members. The productive funds amounted to \$1,000,000 and the income for the year was \$147,000. There were 31,214 volumes in the library. President, Samuel Charles Black, D.D., LL.D.

WASHINGTON AND LEE UNIVERSITY. A non-sectarian institution of the higher education at Lexington, Va., founded in 1749. The enrollment for the regular fall session was 695. There were 36 members in the faculty, includ-

ing 8 additions. The productive funds amounted to \$969,000 and the income for the year was \$190,000. There were 55,000 volumes in the library. An addition was made to the Department of Education, and a new dormitory was finished costing \$116,000. The McCormick family of Chicago gave \$200,000 toward the endowment fund. President, H. L. Smith, Ph.D.

WASHINGTON UNIVERSITY. A non-sectarian co-educational institution, at St. Louis, Mo., founded in 1863. The enrollment for the regular fall session of 1920 was 2520 and 1457 in the extension courses. There were 295 teachers on the staff. The approximate endowment of Washington University was \$9,500,000 and the value of grounds, buildings and apparatus was \$4,000,000. There were 176,013 volumes and 64,200 pamphlets. Two new buildings were to be built, a gift to the university. Chancellor, Frederic Aldin Hall.

WATER PURIFICATION. See **WATERWORKS**.

WATAHWASO, PRINCESS. See **MUSIC, Artists, Vocalists**.

WATERWORKS AND WATER PURIFICATION. Notwithstanding the fact that waterworks are one of the most vital of municipal improvements, much-needed enlargements and extensions, as well as improvements in the quality of the water being furnished, were still being held up by war and after-war conditions through the year. Engineering reports advising and outlining important water-works construction were made during the year for Philadelphia, Baltimore, Norfolk, Cleveland, Chicago, Kansas City and other cities. Contracts were let for the beginning of a portion of a dam on the new Wanaque River project for Newark, N. J., for a portion of a 350,000,000-gallon pumping and filtration plant for Detroit, Mich., and for a part of the new filtration plant for Sacramento, Cal. See **San Francisco**, under **MUNICIPAL OWNERSHIP**.

WEATHER BUREAU. See **METEOROLOGY**.

WELCH, DESHLER. Author, died Jan. 7. He was born at Buffalo, N. Y., July 20, 1854, and was a descendant of John Alden. In 1878-9 he was the editor of a Buffalo weekly. He founded *The Theatre* and edited it from 1884 to 1892. He was at one time business manager to Augustin Daly and he wrote dramatic criticism and stories for the press during many years. He was also European correspondent for several leading newspapers. His books include: *The Life of Grover Cleveland* (1887); *The Bachelor and the Chafing Dish* (1896); *The Story of Louise* (1901); *The Reincarnation of David Damien* (1900).

WELD, STEPHEN MINOT. Merchant, died March 15. He was born at Jamaica Plain, Mass., Jan. 4, 1842; graduated at Harvard, 1860 and served with honor in the Massachusetts volunteers during the Civil War. He was head of a large company of cotton merchants after 1875 and a director of other important enterprises.

WELLESLEY COLLEGE. An institution of the higher learning for women at Wellesley, Mass., founded in 1875. The enrollment for the fall session of 1920 was 1551. The faculty numbered 135. The productive funds of the institution amounted to \$3,540,883, and the income for the year from funds was \$144,145; and the income from all sources including tuition and residence charges amounted to \$1,154,242. There

were 92,000 volumes in the library. The college was to enter upon a campaign for a Semi-Centennial Fund for endowment and buildings with reference to the anniversary of the opening of the college in 1875. The only large gift was through the bequest of Mrs. Margaret Olivia Sage, which amounted to \$472,683. President, (Miss) Ellen Fitz Pendleton, Litt.D., LL.D.

WERTHEIM, JACOB. Jewish banker, died in New York City, Nov. 14. From humble beginnings he became the largest independent cigar manufacturer in the United States and was also prominent in the development of the automotive industry. He was born at Hartford, Conn., in 1850; went into the cigar business in New York at an early age and 1889 formed a firm whose business grew rapidly till with others it was consolidated into the United Cigar Manufacturers. Mr. Wertheim was president of the last named company till 1913 and in 1917 was elected the first president of the Tobacco Merchants' Association, a national trade organization.

WESLEYAN METHODIST CONNECTION IN AMERICA. This denomination grew out of the slave question in the period preceding the Civil War. It was founded at Unita in 1843, and barred from membership all persons connected with slavery, or in any way with the manufacture or sale of intoxicating liquor, and all persons who were members of secret societies. The latest available statistics are those of 1919, when there were 510 churches, valued at \$815,615; 205 parsonages, valued at \$251,915, and 521 Sunday schools, with 36,193 pupils and 2174 teachers. Membership in 1920 was 21,000, a marked increase over the 19,818 members reported for 1919. Foreign missions are conducted in Sierra Leone with 18 missionaries, and in India with 20 missionaries. The work in Japan, which was started in 1919, was considerably expanded during the past year. Home missions are maintained in Alabama, and among the Blue Ridge Mountains. A large part of this missionary work is conducted by the Woman's Home and Foreign Missionary Society. Colleges are maintained at Houghton, N. Y.; Central, S. C.; Miltonvale, Kan.; and a Theological School, Fairmount, Ind.

WESLEYAN REFORM UNION. See METHODISTS, WESLEYAN.

WESLEYAN UNIVERSITY. A non-sectarian institution for the higher education of men at Middletown, Conn., founded in 1831. The enrollment for the fall session of 1920 was 556 students. The students registered the year before were 595. The reason for the decrease was due to the fact that the Trustees in June voted to limit the number of undergraduates to approximately 500, and gradually a reduction was being made. The faculty numbered 56, of which ten were new members. The productive funds of the institution amounted to \$2,560,162, and the income for the past year was \$272,536. There were 121,000 volumes in the library. Through the endowment campaign \$2,250,000 were received of the \$3,000,000 sought. This was to be used for increasing professors' salaries, adding new departments, and very little if any for new buildings. President, William Arnold Shanklin, LL.D.

WEST, SAMUEL. British physician, died, March 2. He was born in 1848; educated at Oxford; studied at St. Bartholomew's Hospital

and at Berlin and Vienna. He was demonstrator of anatomy at Oxford and was in the faculty of the Royal College of Physicians, London, and held other teaching positions in medicine. He was consulting physician or officer of a large number of hospitals and other important institutions. He wrote *Diseases of the Organs of Respiration* (2nd ed. 1909); *How to Examine the Chest*, etc.

WESTERN AUSTRALIA. One of the states of the Commonwealth of Australia, extending from the Indian Ocean to the Northern Territory and South Australia; the largest of the states with an area of 975,920 square miles. The estimated population, Sept. 30, 1919, was 329,920 as compared with 327,162 in 1919. The males numbered 174,268, and females, 154,778. Capital, Perth with a pop. (including suburbs) estimated, Dec. 31, 1918, at 133,000. Executive power is vested in a governor who acts through a responsible ministry and legislative power in a parliament of two houses: The legislative council of 30 members elected for six years and the legislative assembly of 50 members elected for three years. Governor in 1920, Sir F. A. N. Newgate; Prime Minister, James Mitchell. See AUSTRALIA.

WESTERN RESERVE UNIVERSITY. A non-sectarian institution of higher learning at Cleveland, Ohio, founded in 1825. The enrollment in the summer school was 1214 and for the regular fall session, of 1920, 2058. There were 372 members in the faculty. The endowment funds amounted to \$4,074,039 and the income for the year from all sources amounted to \$10,719. There were 100,822 bound volumes in the library. President, Charles Franklin Thwing, LL.D., Litt.D.

WESTMOUNT, QUE. See GARBAGE.

WEST POINT. See UNITED STATES MILITARY ACADEMY.

WEST VIRGINIA. POPULATION. According to the preliminary report of the census of 1920, there were 1,463,701 residents in the State, January 1, 1920, as compared with 1,221,119 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 87,289, a falling off of 9.7 per cent since 1910. The following table was compiled from the estimates of the United States Department of Agriculture, for the years, 1919 and 1920:

Crop	Year	Acreage	Produc. Bu.	Value
Corn	1920	650,000	22,100,000	\$25,636,000
	1919	650,000	22,100,000	36,244,000
Buckwheat ..	1920	40,000	780,000	1,092,000
	1919	40,000	840,000	1,428,000
Oats	1920	200,000	5,400,000	4,266,000
	1919	190,000	4,750,000	4,322,000
Wheat	1920	340,000	4,250,000	8,075,000
	1919	400,000	5,400,000	11,880,000
Tobacco	1920	13,000	*10,400,000	2,600,000
	1919	15,000	*10,500,000	5,250,000
Hay	1920	808,000	*1,010,000	24,360,000
	1919	784,000	*1,172,000	29,987,000
Potatoes	1920	57,000	6,840,000	9,234,000
	1919	55,000	4,950,000	8,662,000
Sorg'm Sirup	1920	5,000	*500,000	675,000
	1919	5,000	*500,000	670,000

* Pounds. * Tons. * Gallons.

FINANCE. Balance on hand, July 1, 1919, \$2,218,091; receipts during fiscal year, \$19,901,391; expenditures during fiscal year, \$19,570,122; balance on hand, June 30, 1920, \$2,549,900.

CHARITIES AND CORRECTIONS. The State institutions with number of inmates, or average

daily attendance in 1920 are as follows: State hospitals at Weston (1100), Huntington (771), Spencer (612), Welch (54), McKendree (24), and Fairmont (34); Tuberculosis Sanitarium, Preston Co. (149); Colored Tuberculosis Sanitarium, Denmar (51); Penitentiary, Moundsville (892, Oct. 1, 1919); Industrial School for Boys, Grafton (376); Industrial Home for Girls, Industrial (94); Children's Home, Elkins (27).

LEGISLATION. The official summary of the extraordinary legislative session in 1920 is as follows: The Legislature was called into extraordinary session on February 27, 1920, by a proclamation issued by the Governor on February 20 to consider and act upon the following subjects: *First:* To consider and enact legislation dealing with the high cost of living. To make the taking of excess profits on the necessities of life a misdemeanor and to fix penalties for the violation of the provisions of such statutes as may be enacted on the subject.

Second: To authorize the Independent School District of Ravenswood to erect a new school building and to level a tax or a bond issue sufficient for that purpose.

Third: To amend the charter of the City of Charleston relating to the paving of its streets and alleys.

Fourth: To amend the charter of the City of Martinsburg relating to paving and sewage and the method of paying for same.

Fifth: To consider and ratify the amendment to the Constitution of the United States, extending the right of suffrage to women and to pass all appropriate legislation making the same effective in West Virginia for all purposes.

Sixth: To amend, if deemed advisable, the corporation laws of the State to allow the issue of non-par stock and to fix the basis of the tax on same.

Seventh: To make necessary appropriations of public moneys to defray the expense of the special session.

The legislature assembled at the capitol in the city of Charleston on Friday, February 27, pursuant to the Governor's call, with a quorum of both houses present, and remained in session until Thursday, March 11. The subjects mentioned in the second, third, fourth, fifth, sixth and seventh items of the call were acted upon favorably; no legislation was had upon the first item, nor was any act passed making the suffrage amendment effective in West Virginia.

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 282,007; Cox (Democrat), 220,789; Debs (Socialist), 5618; as compared with the following vote in the presidential election of 1916: Hughes (Republican), 143,124; Wilson (Democrat), 140,403; Benson (Socialist), 6150. The vote for governor was: Morgan (Republican), 242,327; Koontz (Democrat), 184,762; Montgomery (Non-Partisan), 81,330; Holt (Socialist), 2695.

OFFICERS. Governor, John Jacob Cornwell; Secretary of State, Houston G. Young; Auditor, John S. Darst; Treasurer, W. S. Johnson; Attorney-General, E. T. England; Superintendent of Free Schools, Morris P. Shawkey; Commissioner of Agriculture, James H. Stewart.

JUDICIARY. Supreme Court: President, L. Judson Williams; associate judges, George Poffenbarger, Charles W. Lynch, William N. Miller, Harold A. Ritz.

WETHERBEE, GEORGE. British-American artist, died, July 23. He was born at Cincinnati, Ohio, in December, 1851 and was educated at Boston. He traveled extensively on the continent and lived for some time in the West Indies. He was a member of the Royal Academy in England and of the Royal Academy of Arts at Antwerp.

WHALING. See FALKLAND ISLANDS, DEPENDENCIES OF.

WHEAT. Available data as to the yield of wheat in 1920 were still insufficient for definite estimates of the world's production, such as were annually given out before the war. The information at hand did not indicate a marked improvement in the world's wheat situation over that of 1919. Data published by the International Institute of Agriculture, Rome, for a group of countries representing about 60 per cent of the world's yield, showed a decrease of nearly 9 per cent in acreage and an increase of less than 1 per cent in production as compared with the preceding year. The acreage and production of these countries for 1920 were also slightly under the average for the years 1914-1918, inclusive. The same authority gave the 1920 production of wheat in Belgium, Bulgaria, Spain, Finland, France, Wales, Italy, Netherlands, Sweden, Switzerland, Guatemala, British India, Japan, Algeria, Egypt, and Tunis as 1,050,433,000 bu., or 11.1 per cent above the production of 1919 and 1 per cent below the average production of the 5-year period 1914-18.

The 1920 production in Prussia was given as 47,441,000 bu. or 3.2 per cent above the 1919 crop and in Czecho-Slovakia as 24,437,000 bu. The *Corn Trade News*, London, placed the wheat production of Germany in 1920 at 88,000,000 bu., or over 8,000,000 bu. above that of the year before. In British India, where the harvest begins in March, a record crop of 376,880,000 bu. was produced, as against 280,485,000 bu. in 1919. The Canadian yield of 1920 was given as 284,234,000 bu., or over 50 per cent above the yield of the preceding year. Over half of the Canadian crop is grown in the Provinces of Manitoba and Saskatchewan. No authentic reports relative to the great wheat-producing areas of Russia were available.

The wheat crops of Argentina and Australia, in 1920, where the harvest ends early in the calendar year, fell below the combined production in 1919. The yield in Argentina was placed at 214,000,000 bu. as against 212,800,000 bu. in 1919, and that of Australia at only 47,104,000 as against 75,146,000 bu. the year before. In 1917, the Australian crop was more than 150,000,000 bu.

As estimated by the Department of Agriculture, the United States, in 1920, produced 789,878,000 bu. on 57,412,000 acres or at the rate of 13.7 bu. per acre, while the year before 934,265,000 bu. were produced on 72,308,000 acres, the average rate per acre being 12.9 bu. While the acreage in 1920 showed a large reduction as compared with the preceding year, it was still above the average for the 5-year period 1914-1918 by 3,293,000 acres. The year was marked by an excessive shrinkage in the market price of wheat, which meant heavy losses to the producers after a season of exceptionally high costs of production. The average farm value on Dec. 1, 1920, was only \$1.44 per bushel, as compared with \$2.15 the year before. Based on these prices the total value of the 1920 crop was \$1,140,206,000 and of the

1919 crop \$2,009,407,000. The total value in 1920 was nearly \$60,000,000 below the average for the 5 years 1914-1918. Of the area in wheat this year, 37,993,000 acres were winter wheat and 19,419,000 acres were spring wheat. The yield of winter wheat was 580,513,000 bu. and of spring wheat 209,365,000 bu. The average yield of winter wheat was 15.3 bu. and of spring wheat 10.8 bu. per acre, both yields being below the 5-year average. The area sown to winter wheat in the fall of 1920, for the 1921 crop, according to a preliminary estimate, was placed at 40,605,000 acres or 97.2 per cent of the acreage sown the year before. By far the largest area in any State, 10,343,000 acres, was reported by Kansas, followed by Nebraska with 3,301,000 acres, and Oklahoma with 3,100,000 acres. Kansas in 1919 produced about one-fifth of the country's winter wheat crop, and North Dakota, Minnesota, and South Dakota about three-fifths of the spring wheat.

In the nine spring wheat States, Montana, Wyoming, Colorado, Nebraska, South Dakota, North Dakota, Iowa, Minnesota, and Wisconsin, 80 per cent is common wheat and 20 per cent is durum wheat. The most popular variety of hard spring wheat at present is Marquis, which makes up nearly 60 per cent of the total spring wheat area. A new variety of winter wheat, known as Kanred, originated by the Kansas Agricultural Experiment Station and generally well adapted to the climatic conditions of that State, is regarded as of high value. The variety was first distributed in 1914, and it was reported that 500,000 acres of it were grown in Kansas in 1920 and that approximately 3,000,000 acres were sown to the variety in the fall of 1920.

A survey made by the United States Department of Agriculture to determine the cost of production in 1919 showed that the average cost on 481 farms studied was \$2.15 per bushel.

WHEELER, SAMUEL H. Sewing machine manufacturer, died in Chicago, Ill., November 14. For many years his name was known as the chief partner in the Wheeler and Wilson Sewing Machine company. He was born in 1845 and established the Wheeler and Wilson company in 1894, becoming its president for eleven years.

WHITE, SINCLAIR. British surgeon and professor of surgery, died, August 8. After 1911 he was professor of surgery at the University at Sheffield and in 1909 was president of the British Medical Association. He was born in 1858; and was educated at Queens College, Galway. He became medical officer of health for the city of Sheffield and later practiced as a consulting surgeon. He wrote *Trade Diseases of Cutlers and File-Makers* (1894) and many contributions to the leading medical journals.

WHITELOCK, GEORGE. Lawyer, died, January 7. He was born at Baltimore, Md., Dec. 25, 1854; graduated at the Pennsylvania Military College in 1872; studied law at the university of Maryland, and later studied in Germany and at Johns Hopkins University; after 1876 he was in practice at Baltimore, the name of the firm being Whitelock, Deming and Kemp. He was prominent in many committees of legal revision and was the secretary of the American Bar Association after Sept. 1, 1909; he was a member also of other prominent legal associations. After 1908 he was the Maryland commissioner on uniform State laws and in 1913, he was a member of the commission appointed to frame

the Workmen's Compensation Act. In 1915 he declined appointment to the supreme bench at Baltimore.

WHITON, JAMES MAURICE. Editor and author, died, January 25. He was born at Boston, Mass., Apr. 11, 1835, and graduated at Yale in 1853. In 1865 he was ordained to the Congregational ministry, meanwhile having been the rector of the Hopkins Grammar school at New Haven for ten years. He was then for several years pastor in Massachusetts, New Jersey and New York City but after 1896 was on the staff of the *Outlook* in New York. He wrote extensively for the reviews and published various works on classical and religious subjects, including among the later ones: *Miracles and Supernatural Religion* (1903); *Interludes In a Time of Change* (1909); *Getting Together* (1915). He was a contributor to the *New International Encyclopedia*.

WILLIAM AND MARY, COLLEGE OF. A co-educational State institution at Williamsburg, Va., founded in 1693. There were 284 students enrolled for the summer session of 1920. For the regular fall session there were 180 women and 280 men. The faculty had 27 members. Four professors were added during the year. The endowment fund amounted to \$154,000. The remainder of the support was from State appropriation. The library contained 17,000 volumes. A new dormitory for women was under construction. President, Dr. J. A. Chandler.

WILLIAMS, GEORGE FORRESTER. Journalist and soldier, died on Staten Island, New York, December 31. He was born in Gibraltar in 1877, the son of a captain in the English army, and passed his childhood in the East and West Indies, and on the African Gold Coast. After the death of his parents, he came to New York, at the age of thirteen, penniless, and began work in a newspaper office. He then served in the Civil War for three years and during the last year was war correspondent, and also was war correspondent in Mexico in 1867. In 1870 he became managing editor of the *New York Times* and was subsequently on the *Herald*. He had charge of that paper during the "newspaper war," when the proprietor of the *Herald* succeeded in forcing the sale of the paper at a reduced price. He was afterwards on the staffs of the *New York World*, and *Recorder*. He wrote several books, among which may be mentioned: *Bullet and Shell*; *Unfair in Love and in War*; and *A Half-Century of New York Newspaper Life*.

WILLIAMS COLLEGE. A non-sectarian institution for the education of men, at Williams-town, Mass., founded in 1793. The enrollment for the regular fall session was 575. The faculty numbered 52. The income for the year was \$342,858. Gifts for the endowment fund amounted to \$534,765. The library contained 94,825 volumes. President, Harry A. Garfield.

WILLIAMSON, CHARLES NORRIS. British novelist, died at Bath, England, October 5th. He was among the first to make the automobile a feature of popular romantic fiction. He was born at Exeter and studied science and practiced engineering till the age of twenty-two. Early in his career he published a two-volume work on the life of *Thomas Carlyle* (1881). His success as a novelist began with *The Lightning Conductor*, an automobile romance written in collaboration with his wife who also collaborated in his other stories. Among subsequent tales

may be mentioned *The Princess Pasees; My Friend the Chauffeur; Lady Betty Across the Water; Scarlet Runner; The Car of Destiny; The Motor-Maid; Lord Loveland Discovers America; The Golden Silence; The Princess Virginia; The Love Pirate; The War Wedding* (1916) and *The Lion's Mouse* (1919).

WILLIAMSON, F. J. See PAINTING AND SCULPTURE.

WILKINSON, WILLIAM CLEAVER. Author, died, April 25. He was born at Westford, Vt., Oct. 19, 1833; graduated at the University of Rochester in 1857, and at the Rochester Theological Seminary in 1859, and after studies in France was ordained Baptist minister. After a few years of pastoral work he was a professor in the Rochester Theological Seminary in 1872-81. For the next 10 years he was engaged in literary work until 1892, when he was professor of poetry and criticism in the University of Chicago. A list of his writings is too long to be given here, but contains among the later works: *Wilkinson's Foreign Classics* (6 vols. 1900); *Poetical Works* (5 vols. 1905); *Modern Masters of Pulpit Discourse* (1905); *Some New Literary Valuations* (1909); *The Good of Life* (1910); *Daniel Webster* (1911); *Paul and the Revolt Against Him* (1914); and *Concerning Jesus Christ* (1919 and 1918).

WILSON, JAMES. Ex-Secretary of Agriculture, died at Traer, Ia., Aug. 26, 1920, at the age of eighty-five. He was born in Ayrshire, Scotland, Aug. 16, 1835, and came to this country with his parents in 1851, settling first in Connecticut and later in Iowa where he engaged in farming in Tama County. He was a member of the State Assembly for three terms, being Speaker for one term, and from 1873 to 1877, and again from 1883 to 1885 was a member of Congress. From 1870 to 1874 he was regent of the University of Iowa, and from 1890 to 1897 was director of the agricultural experiment station and professor of agriculture in the Iowa Agricultural College. In 1897 he was appointed Secretary of Agriculture under President McKinley, being retained by Presidents Roosevelt and Taft, and serving continuously in that capacity for sixteen years, until March, 1913. The period of his administration was one of remarkable development of the Federal Department of Agriculture, placing it at the head of institutions of its kind in any country. Its appropriations grew from approximately three and one-fourth million dollars to nearly twenty-five million, the working force from less than twenty-five hundred persons to nearly fourteen thousand, and the organization was greatly expanded. He made the Department indispensable to the farming people and to the nation. Not only were the practical features of the Department's work developed but its scientific investigation was greatly enlarged and its regulatory functions were expanded under such measures as the Food and Drugs Act, the Meat Inspection Law, the Plant Quarantine Act, etc., which were enacted in his time. Agricultural extension was started under the name of the Farmers Coöperative Demonstration Work, plant introduction on the basis of explorers sent to different countries of the world was inaugurated, durum wheat was introduced and established in the northwestern semi-arid regions, and plans for a systematic survey of the soils of the country were put into effect. The beet sugar industry practically grew up during his admin-

istration, measures were set on foot for the eradication of Texas fever among cattle in the South and bovine tuberculosis from dairy herds, and two outbreaks of foot-and-mouth disease of foreign origin were stamped out with vigor and dispatch. A definite forest policy was worked out and applied to the management of the national forests whose area increased until at the close of his administration they amounted to 185,000,000 acres. Increased Federal appropriations were secured for the State experiment stations, and stations were established in Alaska, Hawaii, Porto Rico and Guam. These and many other developments marked a career of unprecedented construction and made him one of the most notable figures in American agriculture.

WILSON, WOODROW. See UNITED STATES AND WAR OF THE NATIONS.

WINCHESTER, CALER. T. Educator, died March 24. He was born at Montville, Conn., Jan. 18, 1847; graduated at Wesleyan University in 1869 and studied in Germany. He was professor of English Literature at Wesleyan University after 1890 and lectured frequently throughout the country. He wrote *Some Principles of Literary Criticism* (1899); *Life of John Wesley* (1906); *A Group of English Essayists* (1910); *Wordsworth—How to Know Him* (1916); and he published *Courses of Reading* which were widely used.

WINDWARD ISLANDS. The group consisting of Grenada, St. Vincent, and St. Lucia, together with the Grenadines (which are one-half under St. Vincent and one-half under Grenada), forming the eastern limit to the Caribbean sea. Each island has its own administration, but they are united under a court of appeals and for certain other purposes. Governor and commander-in-chief at the beginning of 1920, Sir G. B. Haddon-Smith.

WINSLOW, JOHN BRADLEY. Judge, died, July 13. He was born in Livingston County, New York, Oct. 4, 1851 and graduated at Racine College in Wisconsin, 1871. He was judge of the first judicial circuit, 1884-91 and justice of the supreme court of Wisconsin after May 4, 1891, and chief justice after 1907.

WINTERHALTER, ALBERT GUSTAVUS. Naval officer died, June 5. He was born at Detroit, Mich., in 1856 and graduated at the Naval Academy in 1877. In January, 1900 he had risen to the rank of lieutenant commander and in 1905 he was commander, in 1909 captain, and in 1915 rear-admiral. He published in 1889 a report of the proceedings of the International Astrophotographic Congress in Paris. During the Spanish-American War he served on the *Philadelphia* (1898). He commanded a division of gun boats in the expedition to China, 1903. In 1915-17 he was in command of the Asiatic fleet and station with the rank of admiral. After May 11, 1917 he was a member of the General Board of the Navy Department.

WIRELESS TELEGRAPHY AND TELEPHONY. The year was notable for great advances in the application of radio apparatus to communication. New transmitting and receiving stations were built, constantly increasing use was made of radio facilities for the dissemination of press news and commercial messages and wide-spread investigation and experiment had brought radio telephony to such a degree of perfection that it was expected that the coming year would witness the beginning of its use on a

commercial scale in many localities. Wire-directed radio transmission was the term used to designate the employment of wire circuits such as telephone, telegraph, trolley or power lines for guiding or directing high-frequency radiations. By this means, communication between distant points with comparatively small power outfits was successfully maintained, without in any way interfering with transmission over such wire circuits.

What was said to be the most powerful radio station in the world was completed and put into use at Croix d'Hins, near Bordeaux, France, in August. High power arc transmission equipment and antenna towers 820 feet high were employed with generators of 1000 kw. capacity gave the station a regular sending range of more than 12,400 miles, quite equal to that at Nauen, Germany. This installation, that had been begun during the war by the United States navy at the suggestion and request of General Pershing, was named the Lafayette station and it was the intention to turn it over to the French government at an early date.

The equipment of the Nauen station was increased by the installation of a 400 kw. high frequency generator supplying single-phase alternating current that was stepped up to 24,000 cycles by stationary transformers. The antennas were supported on four masts, two of which were 858 feet and two 393 feet in height. By this additional apparatus, the sending range was increased to more than 12,000 miles.

The *Electrical World*, July 17, 1920, stated that the Radio Corporation of America was beginning the construction of what was designed to be the most powerful radio plant in the world, near Port Jefferson, New York, on the north shore of Long Island. Two 200 kw. machines were to be installed and the apparatus was designed with the idea of sending to and receiving from five different stations in other countries simultaneously.

Some of the most interesting and valuable results obtained with wireless apparatus were those of transmitting and receiving between ships and shore stations. During July, (*Electrical World*, July 31, 1920), satisfactory conversation was maintained between a station in New Brunswick, Canada and a ship more than 600 miles at sea. Between Santa Catalina Island, 30 miles off the coast of California and a land station communication was so successful that the American Telephone and Telegraph Company established and put into regular use public telephone stations. As another instance of the possibilities of radio transmission, it may be related that a test was made wherein Luisa Tetravini, grand opera prima donna, in New York City, sang a number of songs into a telephone instrument especially equipped for transmission to a number of ships of the United States navy in various ports and at sea. The receiving apparatus of the warships having been properly tuned to receive such radiations, the singer's voice was distinctly heard in the ships' telephones at distances up to 400 miles. One of the advantages of radio telephone transmission to great distances as contrasted with that by wire only was the preservation of the quality or timbre of a speaker's voice, which while faint, was not altered or distorted to any extent, thus retaining its personal, individual characteristics.

During the sessions of the International Com-

munications Conference in New York City October 21, a demonstration of the possibilities of wire-directed radio telephony was arranged and successfully carried out in which conversations between a ship 40 miles off shore in the Atlantic and another 30 miles off the Pacific Coast were plainly heard by members attending the Conference in New York. Radiations from each ship, picked up by the shore stations were transmitted by wire across the continent with comparatively small generating apparatus.

The thermionic valve, or heterodyne receiver, (see *WIRELESS TELEGRAPHY*, YEAR BOOK, 1918) came into practically universal use both as transmitter and receiver of electromagnetic waves. Applications of radio apparatus to position and direction finding for ships were numerous during the year. A cable was laid in the Ambrose Ship Channel entering New York Harbor and suitably connected with a radio shore station. During a dense fog, the master of an incoming vessel was able to follow his course correctly by means of radio detectors located on each side of the ship. By listening in on the telephone circuits connected with each detector, it was possible to determine the exact location of the vessel with reference to the cable by comparing the intensity of the sounds in the two telephones. In Canada, at Canso, Chebucto Head, near Cape Race, direction finding apparatus that had been erected during the war for the detection of air raids and the approach of submarines was put to use during the year as an aid to navigation; it being possible to give the master of a vessel in fog his true position (*Journal, Engineering Institute of Canada*).

WISCONSIN. POPULATION. According to the preliminary report of the census of 1920, there were 2,632,067 residents in the State, Jan. 1, 1920, as compared with 2,333,860 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 189,196, an increase of 6.8 per cent since 1910. The following table was compiled from the estimates of the United States Department of Agriculture for the years, 1919 and 1920:

Crop	Year	Acreage	Produce. Bu.	Value
Corn	1920	1,960,000	86,044,000	66,254,000
	1919	1,845,000	86,715,000	108,394,000
Oats	1920	2,408,000	107,878,000	52,860,000
	1919	2,348,000	78,423,000	54,896,000
Barley	1920	502,000	15,913,000	13,367,000
	1919	516,000	13,674,000	16,546,000
Wheat	1920	341,000	5,152,000	7,934,000
	1919	552,000	7,392,000	15,893,000
Clover Seed	1920	169,000	338,000	3,887,000
	1919	201,000	402,000	10,693,000
Rye	1920	483,000	7,728,000	10,046,000
	1919	527,000	8,327,000	11,075,000
Tobacco	1920	50,000	*62,400,000	10,162,000
	1919	48,000	*60,960,000	13,533,000
Hay	1920	8,189,000	*5,271,000	108,482,800
	1919	3,061,000	*5,275,000	104,008,000
Potatoes	1920	308,000	33,264,000	28,607,000
	1919	302,000	28,388,000	39,743,000
Sorgh'm St'p	1920	4,000	*300,000	540,000
	1919	3,000	*225,000	396,000

* Pounds. ° Tons. ° Gallons.

FINANCE. Balance, June 30, 1918, \$5,070,563; receipts for year ending, June 30, 1919, \$26,582,892; receipts for year ending, June 30, 1920, \$52,083,559; total receipts for biennium, \$83,737,014; disbursements for year ending, June 30, 1919, \$24,094,808; disbursements for year ending, June 30, 1920, \$48,047,486; total disbursements for biennium, \$72,142,294; balance, June 30, 1920,

\$11,594,721. The debt, June 30, 1920 was: School fund, \$1,163,700; normal school fund, \$1,512,292.

EDUCATION. The school population in the year 1919-20 was 818,885; enrollment, 465,243; average daily attendance, 368,712; number of teachers, 16,985; median salary of teachers, \$86 a month. An exact average of teachers could not be figured from the records, which showed a scale ending "\$150 and up."

TRANSPORTATION. On Jan. 1, 1920, the latest date for which figures were available, the mileage of railroads operating in the State was as follows: Road owned, 7548.35; road operated, excluding trackage rights, 7588.18; road operated, including trackage rights, 7716.17.

CHARITIES AND CORRECTIONS. The following table gives the details in regard to the State institutions in 1920:

INMATE POPULATION JUNE 30, 1920

<i>Institutions</i>	<i>Male</i>	<i>Female</i>	<i>Total</i>	<i>Parole</i>
Wis. State Hospital for Insane, Dr. Frank I. Drake, Superintendent, Mendota, Wisconsin	388	277	665	511
No. Hospital for Insane, Dr. A. Sherman, Superintendent, Wineago, Wisconsin	412	251	663	356
*Wis. School for the Deaf, T. Emory Bray, Superintendent, Delavan, Wisconsin	91	66	157
*Wis. School for the Blind, J. T. Hooper, Superintendent, Janesville, Wisconsin	60	41	101
Wis. Ind. School for Boys, Oscar Lee, Superintendent, Waukesha, Wisconsin	439	439	490
Wisconsin State Prison, Henry Town, Warden, Waupun, Wisconsin	667	26	693	52
Wis. State Public School, Dr. L. H. Prince, Superintendent, Sparta, Wisconsin	145	111	256	741
Wis. Home for the Feeble-Minded, Dr. A. L. Beier, Superintendent, Chippewa Falls, Wisconsin	475	541	1016	108
So. Wis. Home for the Feeble-Minded and Epileptic, Dr. H. C. Werner, Superintendent, Union Grove, Wisconsin	30	64	94	7
Wis. State Reformatory, R. M. Coles, Superintendent, Green Bay, Wisconsin	273	273
Wis. State Tuberculosis Sanatorium, Dr. R. L. Williams, Superintendent, Statesan, Wisconsin	95	67	162
Central State Hospital for the Insane, Sr. J. F. Brown, Superintendent, Waupun, Wisconsin	108	108
Tomahawk Lake Camp, F. A. Reich, Superintendent, Tomahawk Lake, Wisconsin	20	20
Wis. Ind. School for Girls, Mary J. Berry, Superintendent, Milwaukee, Wisconsin	229	229	125

* Vacation period, May 31, 1920, figures used.

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 498,576; Cox (Democrat), 113,422; Debs (Socialist), 80,635; as compared with the following vote in the presidential election of 1916: Hughes (Republican), 221,323; Wilson (Democrat), 193,042; Benson (Socialist), 27,631; Prohibitionist, 7318. The vote for governor was: Blaine (Republican), 366,247; McCoy (Democrat), 247,746; and for United States Senator: Lenroot (Republican), 281,576; Thompson (Independent), 235,029; Reinsch (Democrat), 89,265; Weber (Socialist), 66,172; Mead (Prohibitionist), 5107.

WISCONSIN, UNIVERSITY OF. A co-educational State institution at Madison, Wis., founded in 1848. The enrollment for the summer session of 1920 was 1611 men and 1967 women, and

that of the regular fall session was 4954 men and 2410 women. The faculty numbered 927, as compared with 834 in 1919. The productive funds for the year were \$49,487 and the income amounted to \$3,707,280. The Bradley Memorial Hospital was an important gift completed in 1919-20. President, Edward A. Birge, Ph.D., Sc.D., LL.D.

WLADIMIR, GRAND DUCHESS OF. Widow of the Grand Duke Wladimir, uncle of the late Czar, died in France, September 1920. She inherited the title of the Grand Duchess of Mecklenburg. When the Russian revolution broke out she was in the Crimea with her son the Grand Duke André. In spite of the dangers that she ran she was unwilling to leave the country and remained for a long time in the Crimea but was obliged to leave when the Bolsheviks arrived at the beginning of spring, 1920. She then went to France

where she remained to the time of her death. She was regarded as a warm friend of France.

WOMAN'S CHRISTIAN TEMPERANCE UNION. Instead of the annual convention of the National Woman's Christian Temperance Union, an executive committee meeting was held immediately following the sessions of the International Congress Against Alcohol, in Washington, D. C., in September at which Miss Anna A. Gordon, national president of the W. C. T. U., was one of the principal speakers. During the year that has followed the enforcement of the Eighteenth amendment, the Union has been actively engaged in the several other lines of welfare work which are included in its field of endeavor. Through the Department of Child Welfare a chair of Eugenics was established in

the Iowa State University in connection with the Department of Child Research which is a part of the regular work of the University. Through this important research is being carried on to secure data from which to effect better conditions for the child of the future. Also a Mother-Child center has been established in Detroit where welfare work is being successfully carried out. Through the Department of the Social Morality a new school, the Frances E. Willard School for Girls at Belen, New Mexico, has been opened. The school is for girls who are otherwise unable to secure academic or vocational training. The Americanization Department has developed a new programme of Americanization work, the basic idea of which is the home teaching of the women who are unable, because of family cares, to go elsewhere for teaching in English and the rudiments of citizenship. The plan has been tried out for a year in New York City and a new plant has just been opened in Chicago on Blue Island Ave. in the heart of a densely foreign district. The Department of Scientific Temperance Instruction is proceeding along the established way of securing the instruction of the youth of the nation in the evil effects of alcohol and the narcotic drugs, having for its aim the education of a generation in the harmful effects of such materials to ensure the permanence of the prohibition reform and to further others. Through the Department of Christian Citizenship it is the aim to educate the newly enfranchised women in the proper exercise of their privileges of citizenship. During the spring and summer of 1920 Miss Anna A. Gordon, president, and Miss Julia F. Deane, editor of the *Union Signal*, the official organ of the W.C.T.U., made a tour of such parts of Europe as were open to foreigners in the interests of world prohibition. They returned late in August just in time for the International Congress. An even hundred women from the United States branch attended the World Convention held in London in April. At this meeting Miss Anna A. Gordon was elected vice-president of the world organization and Mrs. Ella A. Boole, treasurer. Miss Gordon is president of the organization in the United States and Mrs. Boole, vice-president-at-large. Other general officers are: Mrs. Frances P. Parks, corresponding secretary; Mrs. Margaret C. Munns, treasurer; Mrs. Elizabeth Preston Anderson, recording secretary; and Mrs. Sarah Haines Hoges, assistant recording secretary. Headquarters are maintained at Evanston, Ill.

WOMAN'S RELIEF CORPS. This organization, which was the first composed entirely of women to have war relief as one of its objects, came into existence to meet the need of the Grand Army of the Republic for assistance in caring for needy comrades and their dependents, and is the only recognized auxiliary of that organization. Local societies were organized in various states in 1872, and in 1883 the national organization was completed. The objects of the organization are to "assist the G. A. R. in caring for their comrades and dependent ones; to perpetuate the memory of their heroic dead; to cherish and emulate the deeds of the army nurses and all loyal women who rendered service to our country in her hour of peril; to maintain true allegiance to the United States of America; to inculcate lessons of patriotism; and to encourage the spread of universal liberty and equal

rights to all." Thousands of flags have been presented and patriotic literature distributed in many communities.

The Thirty-Eighth National Convention, held in Indianapolis, Indiana, on Sept. 21, 22, 23, 1920 was the largest ever held, there being 650 voting delegates and about half that number visiting members present. The membership of March, 1920, reported at that time, amounted to 194,211. There was spent for patriotic work during the year the sum of \$41,331.69; the amount spent for relief work was \$54,307.43, besides the relief other than money which was valued at \$58,398.46. The amount turned over to the Posts of the G. A. R. reached \$22,538.65. For Memorial observance there was spent the sum of \$1787.62, while an additional \$1000 went to decorate the graves of Union soldiers lying in the South. A gift of \$1360 was presented to needy army nurses at Christmas. Flags distributed numbered 5159, and 4549 schools were visited. All over the country the Woman's Relief Corps has inaugurated the little ceremony at naturalization proceedings, of pinning on the lapel of the coat of the new citizen, a small American flag and presenting him with a somewhat larger flag for his home. The organization has within the last two years added as permanent departments of the work Standing Committees of Americanization and Child Welfare. Officers for the year 1920-1921 are as follows: President, Inez J. Bender; secretary, Flo J. Miller; treasurer, Estella E. Plopper. Headquarters are maintained at 218 Citizen's Bank Building, Decatur, Ill.

WOMAN SUFFRAGE. By Jan. 1, 1920, the Anthony suffrage amendment had been ratified by twenty-two States as follows: Illinois, Wisconsin, Michigan, New York, Ohio, Pennsylvania, Massachusetts, Texas, Iowa, Missouri, Arkansas, Montana, Nebraska, Minnesota, New Hampshire, Utah, California, Maryland, North Dakota, South Dakota, and Colorado. During 1920, the following States ratified: Rhode Island, Jan. 6; Kentucky, Jan. 6; Oregon, Jan. 12; Indiana, Jan. 16; Wyoming, Jan. 27; Nevada, Feb. 7; New Jersey, Feb. 10; Idaho, Feb. 11; Arizona, Feb. 12; New Mexico, Feb. 19; Oklahoma, Feb. 28; West Virginia, March 10; and Washington, March 22. Out of the thirty-six States required for ratification, thirty-five had thus accepted the amendment by March 22. Of these, twenty-five ratified the amendment in special sessions and ten in regular sessions. There were bitter contests over the subject in some of the States, especially in Delaware and West Virginia, and repeated attempts to call special sessions to vote on the amendment in Vermont and Connecticut had been made and failed. By the middle of the year, States that had not voted at all upon the amendment were Connecticut, Vermont, Tennessee, North Carolina and Florida. The following States had definitely refused to ratify: Georgia, Virginia, Alabama, Mississippi, South Carolina, Maryland, Delaware and Louisiana. Special efforts were made by the suffrage party partisans during the first part of the year, in order that the women of the country might take part in the coming presidential election. As matters stood, in the middle of the year, 1920, the following fifteen States had equal suffrage: Arizona, California, Colorado, Idaho, Kansas, Michigan, Montana, Nevada, New York, Oklahoma, Oregon, South Dakota, Utah, Washington,

and Wyoming. The following thirteen had granted presidential suffrage: Illinois, Indiana, Iowa, Kentucky, Maine, Minnesota, Missouri, Nebraska, North Dakota, Ohio, Rhode Island, Tennessee and Wisconsin. Two had given the women the vote in primary elections, namely, Arkansas and Texas.

SPAIN. The feminist movement in general, and the woman suffrage movement in particular, has for many years lagged behind in Spain as compared with other countries and Spanish women were not even represented in the great international suffrage congress at Budapest in 1913. There were, however, various individuals and societies that worked for the advancement of woman's rights. One of the most admired of the pioneers was Concepcion Arenal, who was born at Vigo in 1820 and whose career was frequently recalled at various meetings during the current year, the centennial of her birth. Many prominent women, including members of the aristocracy, had also been active in recent years for the improvement of the condition of women workers and for suffrage propaganda, etc., and a feminist review, a union of Spanish women and various other organizations had been established. In 1903 the International Association of Spanish Women was founded and in 1914 a Woman's Association of liberal tendencies began publication of a review called *Redemption*. The former of these was especially active and out of it grew most of the present organizations either having general feminist aims or specifically devoted to the cause of votes for women. The definite organization and rapid progress of the movement dates from 1918 and owes its impetus chiefly to the development of woman labor during the war. Associations of woman workers were formed and a programme of various reforms was put forth, including measures favored by various groups such as the Young Women of the Universities, Women of the Future, The Concepcion Arenal Society, etc. To offset the woman's movement, or rather to keep it within channels approved by the Church, a woman's society of Catholic Action was founded, having many of the same aims as the other women's organizations, but loyal to the Church. There were also various organizations of women Socialists and groups organized under the institutions called the Houses of the People. Such associations, however, were not recognized by the International Association of the Spanish Women, because they were influenced by political groups controlled by men. In 1919, the minister of the interior drew up a plan of social reforms among which was woman suffrage and it was expected that the issue of the suffrage would soon be a practical one in Spanish politics.

WOMEN'S CLUBS, GENERAL FEDERATION OF. There were in 1920 in the United States approximately 2,500,000 members of this federation. There are clubs in every city, town, and most of the villages, composed of "thinking serious-minded women meeting together regularly, with a definite programme which undertakes to reach the full community problem." There are seventeen clubs in foreign countries, and fourteen national organizations affiliated with the Federation. With the coming of woman suffrage the clubs feel that their work is becoming more and more important.

The fifteenth Biennial Convention was held in Des Moines, Iowa, on June 16-23, 1920. A large number of resolutions were adopted, for the

most part reaffirming previous measures which were deemed necessary for the future welfare of the country. These resolutions took the form of urging legislation upon the government. Thirty-six addresses on special subjects were made on matters of public interest. These addresses are printed in the report of the Convention. Reports from the following departments were read: Art, civics, civil service reform, conservation, education, home economics, industrial and social conditions, legislation, literature and library extension, music, and public health. The report of the recording secretary showed that 635 certificates of membership were granted during the two year period to new clubs. After the convention, the departments were reorganized in an effort to clear out all of the "dead timber and put the Federation on an up-to-date working basis."

The officers for 1920-1922 are: President, Mrs. Thomas G. Winter, Minneapolis; first vice-president, Mrs. W. S. Jennings, Jacksonville, Fla.; second vice-president, Mrs. J. R. Schermerhorn, East Orange, N. J.; recording secretary, Mrs. Adam Weiss, Del Norte, Colorado; corresponding secretary, Mrs. George W. Plummer, Chicago; treasurer, Mrs. Benjamin B. Clark, Red Oak, Iowa; and auditor, Mrs. H. A. Guild, Phoenix, Ariz. The official organ of the Federation is *The General Federation Magazine*. Headquarters are maintained in the Maryland Bldg., Washington, D. C. and the director is Miss Lida Hafford.

WOMEN IN INDUSTRY. A study of the industrial opportunities and training for women and girls pursued in 1920 under the Women's Bureaus of the United States Department of Labor indicated from the experience of women's work in war time that the most promising future for craftswomen lay in the following industries in the order of their importance: (a) Machine shops where light parts are made; (b) wood-product factories where assembling and finishing are important processes; (c) optical instrument factories; (d) sheet-metal shops. Investigation of schools giving industrial courses for women tended to show that rather more than half were part-time or evening schools, and that while a majority of them were teaching women some branch of the clothing industry, a considerable number were giving instruction in subjects relating to iron and steel manufacture and textile operations. It was thus indicated that women were engaging in new fields. The largest number of women wage-earners in the industries above mentioned were thus distributed by States and principal cities:

(a) Machine-shop and sheet-metal industries.

- (1) Ohio: Cleveland, Toledo, Dayton.
- (2) Michigan: Detroit, Flint.
- (3) New York: Brooklyn, Buffalo, Rochester, Syracuse.
- (4) Pennsylvania: Philadelphia, Pittsburgh.
- (5) Illinois: Chicago.
- (6) Connecticut: Bridgeport, Hartford, New Haven.
- (7) Massachusetts: Boston, Worcester.
- (8) Rhode Island: Providence.

(b) Wood-product factories where assembling and finishing are important processes—

- (1) New York: New York City.
- (2) Michigan: Grand Rapids.
- (3) Illinois: Chicago.
- (4) Pennsylvania: Philadelphia.
- (5) Massachusetts: Gardner, Wakefield.
- (6) Wisconsin: Sheboygan.

(c) Optical goods factories.

- (1) New York: Rochester.
- (2) Massachusetts: Southbridge.
- (3) Pennsylvania: Philadelphia.

Further general considerations presented as the result of this study were as follows:

Public vocational training facilities for occupations in these industries and for preparing teachers for these industries are already in existence in these States and cities. But very few of these facilities are now being used by women, either because women are not admitted to these public vocational schools, or are not encouraged to attend.

The greater number of industrial training courses in which women are enrolled in public and semipublic schools throughout the country are courses in dress-making and sewing for the custom trade and in millinery.

The increase in the numbers of wage-earning women, the demonstrated capabilities of women during the war, the decrease in male immigrant labor, and the growing demands of our expanding industries call, not only for the admission of women into courses in machine shop, sheet metal, factory woodworking, and optical work, but for the same policy among vocational educators of encouraging girls as is now adopted to encourage boys to take such instruction.

The Women's Bureau issued at the close of the year a report on State and Federal legislation showing to what extent the legal eight-hour working day had been established in the United States and its possessions in 1920. Its findings in part are summarized as follows: Eight States—Arizona, California, Colorado, Montana, Nevada, Utah, Washington, Wisconsin—one Territory, Porto Rico, and the District of Columbia have laws which limit the working day for women in certain occupations to eight hours. The effectiveness of these laws varies greatly in the different States. The degree of inclusiveness of the list of occupations, the provisions that make for thorough enforcement, whether the law limits both daily and weekly hours, whether the law allows overtime, all make for wide differences in the actual results obtained by these laws.

Two States, Kansas and California, provide that, in specified industries, for all hours worked above eight in any one day an increased hourly rate shall be paid. These laws do not establish an eight-hour day, but they do show the recognition by these two States that eight hours is the fair maximum day's labor, and by making the work done in the hours over eight more costly, tend to limit the working day definitely to eight hours.

These States—Massachusetts, North Dakota, and Oregon—have laws which limit the working week for women in certain occupations to 48 hours, but do not limit the daily hours to eight. The actual application, however, forces in many cases an eight-hour day.

One State, Minnesota, has established a basic 48-hour week for all women workers. Since this standard was established by the minimum wage board it is primarily a means of increasing wages.

Five States—California, Connecticut, Missouri, New York, and Pennsylvania—have laws stating that eight hours shall constitute a day's work unless otherwise agreed. Although work above eight hours in any one day is to be paid extra compensation, it is not penalized by requiring rates of time and a half or double time. The Federal Government has a far more definite law that provides that persons employed on contracts for the United States shall be paid on the basis of eight hours constituting a day's work, with time and a half for overtime.

Five other States—Illinois, Indiana, Montana, Ohio, and Wisconsin—and the Federal Government have laws providing that eight hours shall be a day's work in a limited number of occupations. Illinois and Indiana cover only manual

labor; Montana, labor on public highways; Ohio, work in manufacturing, mechanical, or mining business; Wisconsin, work in manufacturing or mechanical business; United States, letter carriers.

The Territory of Alaska has been the first political division of the United States to pass an all-inclusive eight-hour law. This law, which provides an eight-hour day for all wage and salary earners, was submitted to the electorate and passed. An Alaskan court, however, has declared it to be unconstitutional. No test case has as yet reached the United States Supreme Court.

The largest group of laws limiting the hours of work to eight in any one day covers work done either directly or indirectly for the State. Next to this is the group of laws covering occupations considered especially hazardous. For further details presented in convenient tabular form see *The Eight-Hour Day in Federal and State Legislation* (Bulletin, No. 5), Women's Bureau, United States Department of Labor. For other aspects of the general subject including especially a study of the experience of war-time with precise data in respect to the employment and substitution of women in industry, see *The New Position of Women in Industry* (Woman's Bureau, United States Department of Labor, 1920).

WOOD, HORATIO C. Professor of medicine and author of medical works, died, January 3. At the time of his death he was professor emeritus of materia medica, pharmacy, and general therapeutics in the University of Pennsylvania Medical School. He was born at Philadelphia, Pa., Jan. 13, 1841 and graduated from the medical department of the University of Pennsylvania in 1862. In youth he showed great interest in natural history and he did original work in the Academy of Natural Science before studying medicine. After serving in the hospitals he began private practice in 1865, continuing his study in natural history, especially in botany, and publishing many papers within that field. In 1866 he was appointed to the medical faculty of the university and after the organization of the university hospital became professor of nerve diseases. In 1901 he was made professor of materia medica and therapeutics. His works include *Thermic Fever, or Sunstroke* (1872); *Materia Medica and Therapeutics* (1874); *Brain Work and Other Work* (1880); and *Nerve Diseases and their Diagnosis* (1874). He was a member of many learned bodies, president of the College of Physicians in 1902 and in 1903, and president of the American Pharmacopoeial Convention from 1890 until 1910.

WOOD, LEONARD. See UNITED STATES.

WOOD, SIR LINDSAY. British coal-owner, died in England, September 22. For more than forty years he had been president of the Durham Coal-owners Association. He was born June 21, 1824 and educated at Kings College, London. After serving as a mining engineer in the Hetton collieries which his father was then managing he became assistant-manager and after his father's death in 1866 managing-director. The subject of the pressure of gas in coal drew his attention and he made important experiments in respect to it. He also did useful work on various royal commissions and as chairman of the Durham Coal-owners Association he did much to maintain good will between the owners and the miners. In politics he was a Unionist.

WOOD PULP. See PAPER.

WOODS, HERBERT SPENCER. Physiologist, died at Dallas, Texas, January 4. He was born in Missouri and graduated at the University of that State. He studied at the university of Illinois, Wisconsin and California and taught at the Texas Christian University and at the Agricultural and Mechanical College at Texas.

WOOL. See LIVE STOCK.

WOOL AND WORSTED. See TEXTILE MANUFACTURING.

WORCESTER FESTIVAL. See MUSIC, *Festivals*.

WORCESTER POLYTECHNIC INSTITUTE. A non-sectarian institution for theoretical and practical training for men at Worcester, Mass., founded in 1865. The enrollment for the summer session of 1920 was about 300, and that of the regular fall session was 559. There were 61 members in the faculty, including 11 additions. The productive funds of the institution amounted to 1,500,000. Gifts during the year amounted to \$400,000, which was added to the endowment. President, Ira N. Hollis. The library contained about 15,000 volumes.

WORKMEN'S COMPENSATION. **FEDERAL LEGISLATION FOR 1920.** An act supplementing the present workmen's compensation act was passed defining compensation and to whom it should go more clearly. Throughout the war risk act the terms "father" and "mother" are broadened to include persons who for a year prior to the man's enlistment have stood "in loco parentis" to him. "Brother" and "sister" include children of such persons. All legally adopted children are included. The time during which family allowances are payable was extended from one month to four months after the end of the war. This act was made retroactive to April 6, 1917. The definition of permanent total disability is broadened and provision made for compensating double permanent total disability at \$200 a month. This law went into effect Dec. 24, 1919.

STATE LEGISLATION: GEORGIA. A new act was passed in Georgia. It is similar to the workmen's compensation laws in other States, compulsory as to public and elective as to all private employments where more than five are engaged. It provides compensation for accidental industrial injuries not due to the employee's willful misconduct, intoxication or willful violation of safety laws. For the first thirty days after an accident the employer must provide medical care not exceeding \$100. No cash compensation is given for the first fourteen days. In case of death total dependents are to receive one-half of the wages for 300 weeks. This act went into effect Oct. 1, 1920.

KENTUCKY. This State increased the maximum of its weekly compensation in a number of directions. Allowances for special needs were included in the law. This law went into effect June 16, 1920.

LOUISIANA. Scale of compensation was increased in this state from 55 per cent to 60 per cent of wages. Insurance is made compulsory in a company approved by the secretary of state, unless exception is made by him. If an employer settles for a lump sum at a discount greater than 6 per cent a year he is penalized to the extent of three times the compensation. The act is extended to railway and steamboat employees not covered by the federal liability act. This law went into effect Aug. 6, 1920.

MARYLAND. Waiting period before compensation is payable is reduced from two weeks to three days. Allowances for medical care is increased from \$150 to \$300. Scale of compensation was increased from 50 to 66⅔ per cent in all except cases of temporary partial disability. Compensation is provided for loss of hearing and unlisted mutilations and disfigurement. Correction of vision by lenses cannot be considered in computing loss of vision. A beneficiary must move out of the United States, instead of out of the state, to permit a commutation of compensation. The term "child" has been extended to include step-children, illegitimate children, and other children who were members of the deceased worker's household when the accident or death occurred. The state also granted increased appropriation for the industrial accident commission. This law went into effect June 1, 1920.

MASSACHUSETTS. Failure to give notice of injuries or to file a claim within the prescribed period will not bar recovery under the workmen's compensation act if it is found that the insurer was not prejudiced in consequence. This law went into effect July 14, 1920.

NEW YORK. The workmen's compensation law is extended to include a limited number of occupational diseases. The maximum and minimum weekly compensation was raised. Loss of binocular vision or loss of 80 per cent vision of an eye is made equivalent to the loss of an eye. Many details as to amounts of payment, commission percentage, lump sum reductions were specified. This law was enacted May 5, 1920.

NORTH DAKOTA. The workmen's compensation bureau was enlarged, a commissioner of insurance being included. The bureau is to represent the employers, labor, and the public. This law went into effect July 1, 1920.

OHIO. If an employer fails to pay workmen's compensation insurance premiums or execute a bond, the court appoints a receiver for his property and business who shall pay the premiums determined to be due to the state insurance fund. Other duties of a firm were defined. This law went into effect Feb. 9, 1920.

OREGON. Compensation benefits accruing between Dec. 1, 1919, and June 30, 1921, are to be increased 30 per cent. This law was enacted June 17, 1920.

RHODE ISLAND. Scope of the workmen's compensation law is extended from employees earning not more than \$1800 a year to those earning not more than \$3000 a year. This law went into effect April 23, 1920.

SOUTH DAKOTA. Insurance commissioner is authorized to regulate workmen's compensation insurance premium. This law went into effect Sept. 7, 1920.

VIRGINIA. Maximum weekly compensation was raised, waiting period reduced from 14 to 10 days, and eliminated entirely if incapacity lasts more than six weeks. Employers are liable for medical care covering the period of 60 instead of 30 days. Further provisions for compensation were specified. Appropriations for commissioners was increased. This law went into effect July 1, 1920.

PORTO RICO. Workmen's relief commission was reorganized giving power to the governor to appoint five commissioners representative of the different parties and the bureau of labor; commissioners given power to investigate all accidents. An employer's property may be attached

to secure payment of compensation. This law went into effect May 6, 1920.

WORLD'S CROPS. See AGRICULTURE.

WRANGEL, GENERAL. Russian leader of the White Guards; successor of Kolchak, Denikin and others as commander of the Anti-Bolshevist forces in Russia. He was prominent in 1920 as the main hope of the movement against the government. He was born at Petrograd in 1879, the son of a Baltic nobleman of Swedish descent and was brought up like other members of the noble class. At the age of twenty he entered the Academy of Engineers at Petrograd where he finished his course with honor. He served with a Cossack regiment in the Russo-Japanese War. When the great war broke out he was placed in command of a regiment of horse guards and distinguished himself by a brilliant rally of his cavalry resulting in the capture of the first two German guns taken by the Russians. He was then raised to the rank of colonel, and in 1915 was appointed to the command of a Cossack regiment on the Galician front. He was on the Austrian front at the outbreak of the revolution. He was a follower of General Kaledin and afterwards joined Denikin. When Denikin failed, Wrangel became the chief of the main Anti-Bolshevist army, and during the summer of 1920 attained a considerable degree of success.

WRECKS. See SAFETY AT SEA.

WRESTLING. A new heavyweight wrestling champion was the outcome of the many professional battles on the mat held during 1920. Ed. "Strangler" Lewis captured the title through his defeat of Joe Stecher who had won the championship in 1919. The success of Lewis was due to his persistent use of the hold known as the "head lock." This particular hold has aroused considerable criticism among followers of the sport on the ground of its brutality and it is possible that 1921 will see it barred.

The Amateur Athletic Union championships were held at Birmingham, Ala., the winners in the various classes being: 108 pounds, K. Benson, Swedish-American A. C.; 115 pounds, Sam Pam-mow, Chicago Hebrew Institute; 125 pounds, A. Gallas, Greek Olympic Club; 135 pounds, G. Metropoulis, Gary (Ind.) Y. M. C. A.; 145 pounds, W. Tikka, Finnish-American A. C.; 155 pounds, E. Leino, New York A. C.; 175 pounds, Karl Kunert, Gary Y. M. C. A.; heavyweight, N. Pendleton, New York A. C.

WRIGHT, ARTHUR. British clergyman and scholar, died August 7. He was born at Birmingham, Eng., Aug. 16, 1843 and graduated with honors at Cambridge, where he was fellow, lecturer, and tutor. He wrote *The Composition of the Four Gospels* (1896); *Some New Testament Problems* (1898); *St. Luke's Gospel in Greek* (1900).

WUNDT, WILHELM. Celebrated German psychologist, died at Leipzig in September. He was born in Neckarau in Baden in 1832 and studied at the universities of Tübingen, Heidelberg and Berlin, specializing in medicine. He taught respectively at Heidelberg, Zürich and Leipzig. He was rector of the last-named university in 1889-90 and he founded there a laboratory of psychology which was taken as the model for similar establishments in many universities of Europe and America. He has been termed the creator of modern experimental psychology and his *Grundzüge* has been for many years a standard text. The breadth of his training and the ex-

traordinary range of his scholarship enabled him to effect a synthesis of the various branches of the science pursued by famous investigators separately in the past. He defined psychology as the science of immediate experience. His system begins with physiological facts and tries to discover elementary psychical laws by variation of external conditions. In short, his method treats physiology as a means toward the building up of psychological science. He was a philosopher as well as a psychologist and in the course of his intensely laborious life he published volumes on a wide range of subjects in both these fields, of which the list is too long to be quoted in full here. In addition to his personal writings, he edited twenty volumes of philosophical studies.

Among the works which have been widely used in English speaking countries may be mentioned: *The Principles of Physiological Psychology* and the six-volume treatise, *Völker Psychologie*, which discusses language, art, mythology and religion. His work on logic is also widely known and regarded as in some respects among the most original of his treatises. It follows somewhat along the lines of Mill's *Logic*, but is wider in scope and contains a greater variety of illustrations. His work on ethics is remarkable also for its comprehensiveness. He owed much to his contemporaries, especially to Herbert and Fechner, but though his psychological work is not in all respects original, it must be regarded as his chief claim to permanent recognition.

WURTEMBERG. One of the constituent states of the former German empire; situated between Bavaria on the east and Baden on the west. Area, 7,534 square miles; pop., Dec. 1, 1910, 2,437,574. It was proclaimed a republic in November, 1918 and on Mar. 17, 1919, Wilhelm Blos was elected president.

WYOMING. POPULATION. According to the preliminary report of the census of 1920, there were 194,402 residents in the State, Jan. 1, 1920, as compared with 145,965 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 15,811, an increase of 42.1 per cent, since 1910. The following table was compiled from the estimates of the United States Department of Agriculture for the years, 1919 and 1920:

Crop	Year	Acres	Prod. Bu.	Value
Corn	1920	65,000	1,560,000	874,000
	1919	50,000	800,000	1,320,000
Oats	1920	300,000	11,400,000	7,068,000
	1919	285,000	5,130,000	5,746,000
Barley	1920	28,000	1,008,000	1,109,000
	1919	34,000	510,000	892,000
Wheat	1920	254,000	5,080,000	6,858,000
	1919	250,000	3,540,000	7,505,000
Rye	1920	30,000	540,000	621,000
	1919	30,000	270,000	486,000
Hay	1920	1,100,000	2,210,000	27,348,000
	1919	925,000	1,151,000	26,583,000
Potatoes	1920	27,000	8,875,000	4,050,000
	1919	30,000	2,400,000	4,560,000
Tons.				

MANUFACTURES. Preliminary figures of the United States Bureau of the Census showed exceptional increase at the census of 1919, as compared with that for 1914, practically due to the tremendous increases in the petroleum refining industry. In the order of their importance from a percentage standpoint, the increases for the several items ranked as follows: Materials, 658.3 per cent; value of products, 624.2 per cent; value added by manufacture, 590.6 per cent;

wages, 381.8 per cent; salaries, 217.1 per cent; capital, 183.2 per cent; wage earners, 120.1 per cent; salaried employees, 113.3 per cent; proprietors and firm members, 89.8 per cent; primary horsepower, 76.2 per cent; and number of establishments, 69.7 per cent. The capital invested, as reported in 1919, showed a gain of \$53,621,000, or 183.2 per cent, over that in 1914. The average capital per establishment was approximately \$145,000 in 1919 and \$87,000 in 1914. The cost of materials used in 1919 showed an increase over that for 1914 of \$36,597,000 or 658.3 per cent. The average cost of materials per establishment in 1919 was approximately \$74,000 and in 1914 \$16,000. The value of products in 1919 showed an increase over that in 1914 of \$70,049,000, or 624.2 per cent. The average per establishment in 1919 was approximately \$142,000 and in 1914 \$33,000. The value added by manufacture in 1919 showed an increase over that in 1914 of \$33,452,000, or 590.6 per cent. The value added by manufacture in 1919 formed 48.1 per cent of the total value of products and in 1914, 50.5 per cent. In 1919, as compared with 1914, the number of salaried employees showed an increase of 469, or 113.3 per cent, while the average number of wage earners increased 3589, or 120.1 per cent. A comparative summary for the State for 1914 and 1919 follows:

	Census		Per cent. of increase 1914 to
	1919	1914	1919
Number of establishments	572	337	69.7
Persons engaged in manufactures	8,017	3,696	116.9
Proprietors and firm members	556	293	89.8
Salaried employees	883	414	113.3
Wage earners (average number)	6,578	2,989	120.1
Primary horsepower	17,624	10,004	76.2
Capital	\$82,891,000	\$29,270,000	183.2
Services	12,824,000	2,843,000	351.1
Salaries	1,684,000	531,000	217.1
Wages	11,140,000	2,312,000	381.8
Materials	42,158,000	5,559,000	658.3
Value of products	81,272,000	11,223,000	624.2
Value added by manufacture (value of products less cost of materials)	39,116,000	5,664,000	590.6

ELECTIONS. The vote in the presidential election of 1920 was: Harding (Republican), 35,091; Cox (Democrat), 17,429; Christensen (Farmer-Labor), 2180; Debs (Socialist), 1234; as compared with the following vote in the presidential election of 1916: Wilson (Democrat), 28,316; Hughes (Republican), 21,698; Benson (Socialist), 1453.

WYOMING, UNIVERSITY OF. An institution of the higher learning at Laramie, Wyo., founded in 1886. The enrollment for the summer session of 1920 was 352 and that of the regular fall session was 444 resident college students. The faculty numbered 75. The income from State and Federal governments was \$450,000. There were about 45,000 volumes in the library. President, Aven Nelson.

YACHTING. The yachting season of 1920 was notable for the series of races held off Sandy Hook with the America's Cup, emblematic of the world's championship, at stake. The defending yacht was the Resolute owned by members of the New York Yacht Club and the challenger was the Shamrock IV, owned by Sir Thomas Lipton of the Royal Ulster Yacht Club of Belfast, Ireland. It was the fourth attempt on the part of Sir Thomas to capture the cup and like his former efforts resulted in failure.

Five races were sailed of which the Resolute

captured three and the Shamrock two. Of the two races won by the challenger only one could be termed a victory gained on its merits as the second defeat of the Resolute was due solely to the frail construction of the defending yacht.

The conditions under which the races were sailed were most unsatisfactory. Merchant craft interfered with the yachts and the yachts in turn caused much trouble for incoming liners and boats engaged in harbor traffic. The conduct of the races too aroused much criticism, especially the postponement of the fifth and deciding contest on the ground that the skippers of the rival boats feared to risk their frail craft in a sea they regarded as "too rough" and with a "wind too brisk." It was contended by the critics that such weather conditions would have afforded a real test of the seaworthiness of the two yachts. The probabilities are that the future races of the kind will be held over the Brenton's Reef course off Newport and also that the competing yachts will be of a type prepared to go out and spread their canvas in any kind of weather.

A brief summary of the races follows:

First race, July 15, fifteen miles to windward and return, a light wind blowing from the southwest. The Resolute withdrew when she was one mile ahead of the Shamrock and about to round the fifteen-mile turn as a result of the parting

of her throat halyards which dropped her gaff and let her mainsail down. The Shamrock finished in 4 hours, 25 minutes, 12 seconds, elapsed time.

Second race, July 20, thirty-mile triangular course, Shamrock winning by 9 minutes, 27 seconds, elapsed time, and by 2 minutes, 26 seconds corrected time. The Resolute's greater sail area gave the defender a handicap of 6 minutes, 40 seconds.

Third race, July 21, windward and leeward course in light southwest wind, Resolute winning by her time allowance of 7 minutes, 1 second although each yacht covered the course in the same time, 4 hours, 3 minutes, 6 seconds.

Fourth race, July 23, thirty-mile triangular course in squally weather, Resolute winning by 3 minutes, 18 seconds elapsed time and 9 minutes, 58 seconds with handicap.

Fifth race, July 27, windward and leeward course in light southwest wind, Resolute winning by 13 minutes, 5 seconds elapsed time and 19 minutes, 45 seconds with handicap.

The first annual race between fishing schooners for the championship of the North Atlantic Fishing Fleet was held off Halifax, Nova Scotia October 30 and November 1 over a forty-mile course. The contending boats were the Esperanto representing the United States and the Delawana

representing Canada, the winner of two out of three races to be declared the victor. The Esperanto captured two straight races, the first by a margin of 18 minutes, 28 seconds and the second by 7 minutes, 15 seconds thereby taking possession of the trophy and also winning a purse of \$4,000.

The international races for the Harmsworth Motor Boat Trophy were held at Cowes, Isle of Wight, August 10 and 11, the regulations calling for the best two out of three races. Miss America, owned by G. A. Wood, United States, won two straight victories over a thirty-mile course. In the first race Maple Leaf VI, owned by Sir M. Edgar, England, finished second but in the second race Miss Detroit IV, another American boat, took second honors.

Miss America added to her laurels of the year by winning the Gold Cup championship at Detroit, Mich., and the Lake George one-mile trophy. This boat also established a new world's record by averaging 77.85 miles per hour.

YALE UNIVERSITY. A non-sectarian institution of the higher learning at New Haven, Conn., founded in 1701. The enrollment for the regular fall session of 1920 was 3896. The faculty numbered 569 including 52 additions. The endowment amounted to \$24,049,730.45. Yale University was made beneficiary under the will of the late John W. Sterling of New York City, who left a bequest to Yale of about sixteen or twenty millions of dollars. The sum was to be held by the trustees for the University under Mr. Sterling's bequest and the money to be used for memorial buildings and for the foundation of scholarships, fellowships and lectureships, the endowment of new professorships, and the establishment of special funds for prizes. This in not included in the endowment figures mentioned above. Notable also were the annual gifts of the alumni during the past three years through the Yale Alumni University Fund Association, each year's contribution totaling over half a million dollars and the largest being in excess of \$700,000 for a single year. The library contained 1,250,000 volumes not counting unbound pamphlets. The annual accessions exceed 40,000 including 5000 periodical publications, and about 60,000 volumes and 4000 pamphlets in the Yale Law School library and additional volumes in other school libraries of the university. A beautiful Memorial Quadrangle containing six campuses which was the gift of Mrs. Stephen V. Harkness, and covers an entire city square was the latest building under construction, at a cost of over a million dollars. Among the other gifts, the most important one was that of Mr. Sterling's. The annual gifts of the alumni during the past three years were a contribution of about 700,000 for each single year. In March, 1919, a thorough-going reorganization of the University was voted by the Yale Corporation. This included, among other features, the creation of a common undergraduate Freshman Year; the elimination of the Select Course from the Sheffield Scientific School and the extension of the course in that School from three to four years; the concentration of all post-graduate work not given in the professional Schools in the Yale Graduate School; the creation of several new offices, including the Provost, who is an educational assistant to the President; the Dean of Students, who is in charge of student morale, and the Dean of Freshmen, to administer with a separate

faculty the common Freshman Year; departmentalization of the faculty and other changes of far-reaching importance. Advance was made in 1920 in carrying out this programme. President, Arthur Twining Hadley, Ph.D., LL.D.

YAP. One of the Caroline Islands in the Pacific, the administrative centre of the western group, prominent in 1920 as the subject of disputed claims on the part of the United States and Japan. It contained an important wireless station. Japan claimed exclusive control to the cable, but the United States contended that as the German islands in the Pacific had been ceded to the Allied and associated Powers by the Treaty of Versailles, their property could not be disposed of without the consent of the United States. Japan had brought the matter to the attention of the Assembly of the League of Nations at Geneva and Great Britain had joined her in so doing. The United States government declared that it had served notice during the Peace Conference that it reserved the right to object to exclusive Japanese control of the cable. No agreement had been reached on the subject at the close of the year. The view of the United States was that Yap should be internationalized and should be an international cable landing station, not under the control of any single Power. The position of Japan was understood to be that as her laws provided for government ownership and control of all communications in Japanese possessions, the cable landing at Yap must be exclusively under Japanese direction.

YELLOW FEVER. We condense slightly the following item from the *Medical Record* for Dec. 18, 1920. "Mr. George Vincent, President of the Rockefeller Foundation, authorizes the announcement of the discovery by Dr. Hideyo Noguchi, at the Rockefeller Institute for Medical Research, of a vaccine for yellow fever which promises to confer immunity against the disease. The discovery of the yellow fever organism has also made it possible for Dr. Noguchi to develop a serum which, it is believed, will reduce the mortality from yellow fever. Already vaccination against yellow fever of people going to tropical countries is being done at the Broad Street Hospital, New York, with vaccine furnished by the Rockefeller Institute. The first shipment of vaccine to tropical countries was made a year ago when three hundred bottles were sent to Mexico; other shipments have been made since, the latest on Nov. 10, 1920. The Central American authorities are so well convinced of the efficacy of Dr. Noguchi's vaccine that those who have been successfully vaccinated are permitted to travel without quarantine detention."

In the latter part of 1919 yellow fever had practically been extinguished for the time in the Western continent, but during the present year there was a recrudescence of cases and Dr. Noguchi repaired to Yucatan to make first hand studies of the disease.

YOUNG MEN'S CHRISTIAN ASSOCIATION. A Christian organization for the promotion of social, economic, recreative, physical, educational, and spiritual development of men and boys throughout the world. It offers a chance for fine fellowship, enjoyment, and self-betterment among young men.

UNITED STATES AND CANADA. The International Committee, as the agent of the International Convention, promotes the general work and policies of the movement. This Committee

is composed of 200 business and professional men representing each state and Canadian province, and elected triennially by the International Convention of the North American local Associations. Of this Committee, with its headquarters in New York, Mr. Alfred E. Marling is chairman and Dr. John R. Mott, general secretary. There are 47 State, group, and national Committees in Canada and the United States with their 1314 business men, that give closer and more direct help and encouragement to the 2194 local Associations in their respective States. In addition, there are a number of metropolitan committees, also county organizations giving special service to the local Associations in large cities, and to those in rural districts respectively. To aid in training the personnel for the movement in America, there are three Association colleges at Springfield, Mass., Chicago, Ill., and Nashville, Tenn.; also nine Summer Schools in various sections of the country, and twenty-seven local training centres. The Association in its various local organizations conducts definite forms of activities for symmetrical manhood and boyhood-building such as social and recreative, physical and body-building, educational, commercial, industrial, and vocational training, Bible study, religious meetings, personal interviews, life work guidance, and spiritual development.

Statistics for April 30, 1920 showed 85,106 business and professional directors, and committee men giving volunteer service; 5199 employed general secretaries and assistants; 868,892 members, of which 199,615 are boys, and 157,135 are in industrial occupations. The total net property and funds paid in is \$128,019,000. Contributions from friends in America, \$8,354,000, and the total operating expenditures, \$38,484,800 for 1920 or an increase of 31 per cent over the previous year. The service of the local Associations to men and boys includes a great variety of features, among the more important of which are: 75,305 socials, entertainments, banquets, receptions, etc.; 117,731 situations or positions secured for men through the employment sections; 308,971 different educational courses conducted by the Association; 136,255 different men and boys enrolled in the regular courses in Bible study; 26,105 decisions for the Christian life, and 8771 united with the church of their choice as a direct result of Association efforts.

The most notable event of the year was the Fortieth International Convention held in Detroit. This was the largest and most representative gathering in the history of the Brotherhood. The Canadian National Convention in Toronto was another similar important event with special significance for the growth of the movement in the Dominion of Canada. An important Boy Workers' Assembly was held in Blue Ridge. Another notable gathering was that of the Student Volunteer Convention, attended by over 7000 students and professors from nearly a thousand universities and colleges.

Along with many other organizations, the Association has turned during 1920 to many international considerations. The World's Committee held its first meeting since 1914. The World's Student Christian Federation brought together in Europe the leaders in the work of Christ among students of thirty-five or more nations.

FOREIGN. Entirely aside from its war service

to young men in the armies and navies of the world, the Association movement of America today ministers through its leaders and financial friends, to the whole range of the life of the young manhood and boyhood of some twenty nations, including the most progressive lands of Asia, Latin-America, Africa, South America and the Pacific islands world. Through the International Committee of North America, and the friends of this great work throughout the world, over 200 experienced general secretaries are leading the development of this work in foreign lands. Coupled with the forces sent from America for this service, there are over 600 native secretaries employed at local expense. While this service of the American Associations in foreign lands has been influenced by the war and its after conditions, yet in practically every foreign field the service has shown constant growth of the Associations, an increase in the spirit of voluntary service and sacrificial giving, in the multiplication of the number of native secretaries, and in the central emphasis on the distinctively spiritual and Christian character of the work. Special attention should be called to the fact that during each of the recent years there has been large growth of self-support and of indigenous leadership in most of the foreign lands. One of the most remarkable contributions of the Association is its far-reaching influence as a unifying force among the different nations and races. The plans of the foreign work were being seriously affected by the prevailing financial conditions, the exchange problem alone involving an enormous increase in the budget. During this thirtieth year of the development of Association work in foreign lands as directly related to the International Committee, there were profound changes in the social, political, religious and industrial life of the people during the period of transition from world war to world reconstruction. Japan, China, India and the Near East especially faced most difficult national crises. Latin-America was confronted afresh with her most difficult and unsolved problems. These countries, therefore, were led to consider anew what were the real constructive agencies and influences at work, and the Association was examined and tried out as never before.

The expense for the leadership and promotion of this work from America among the National Committees of foreign lands, and their local Associations was \$1,124,112 for 1920. In China the 25th anniversary of the founding of the Association in that nation was celebrated with a great convention. The first industrial Association in Japan was opened in Tokio. A Japanese secretary directs this pioneer work which is supported by Japanese funds. In India where conflicts between labor and capital are making their appearance, the Tata Steel Works has provided a fund of \$66,000 and asks the Association to begin the first welfare work among India's needy industrial classes. Similar work is beginning in other foreign lands and the Association is asked to conduct it. The foreign Associations have now come to the time when they are strong enough to take the lead in serving their communities in times of emergency when other organizations fail. During the great influenza epidemic in Brazil, the Association in several cities rendered notable service in relief and sanitation measures, receiving much praise from the public press and the officials of the Re-

public. In Porto Rico, the San Juan Association likewise ministered to the needy during the earthquake disaster. In Foochow, China, the Association quickly and successfully mobilized its forces to combat the cholera epidemic in the summer of 1920 and took the lead in organizing the Heth Committee which carried a campaign of relief and prevention which finally rid the city of that disease. Just now at the end of the year there were calls for directors and play leaders from 25 different countries. The International Olympic Committee through its president, asked the Association to assist in a plan to democratize the World Olympics and to make these games more truly a world influence.

ASSOCIATION WAR WORK. Although nearly two years have elapsed since the signing of the armistice, the war work of the North American Associations during 1920 constituted one of its three principal activities. In America, notwithstanding the putting into effect of the new policy of the War and Navy Departments, by which the government planned to conduct the larger part of the welfare work within training camps and stations, the Association carried on its work both in the army and navy among far larger numbers of soldiers and sailors than during the pre-war period, and it was evident that this service must be greatly enlarged, especially in communities adjacent to the great military camps and naval stations. Work was accomplished along educational, re-employment, and general rehabilitation lines among hundreds of thousands of ex-soldiers during the critically important demobilization period. In extent, however, by far the greatest work being accomplished by the North American Association in the midst of war conditions or in critical circumstances occasioned by the war, was that still in progress among the young men of Allied countries and among prisoners of war. The North American Associations were ministering in their war work to more than twice as many young men as they were serving in the large and growing Home Work and Foreign Work combined. In each of two fields, Poland and France, the war service plans embraced fully one million men.

The National War Work Council had hoped to be able to disband during the past year and to hand over any of its unfinished tasks to the permanent Association and other agencies; but, after prolonged consideration, it decided that, owing to the volume of the work, the size of the fund entrusted to the Council, as well as owing to the fact that America had not yet made peace, and the further fact of the alarmingly unsettled conditions in the war areas, it was their "clear duty to continue to discharge their trust until conditions were more nearly stable and normal." Headquarters are maintained at 347 Madison Ave., New York City.

YOUNG, WILLIAM. Author and play writer died, October 2. He was born in Illinois, in 1847. He was the author of volumes of verse and of a number of plays including *The Rajah* (1883); *Young America* (1894); *Woman's Wiles* (1898); a dramatization of *Ben Hur* (1899); and *A Japanese Nightingale* (produced in 1903).

YOUNG WOMEN'S CHRISTIAN ASSOCIATION. This is a national organization "to advance Christian social service by advancing the physical, social, intellectual, moral, and spiritual interests of young women." Total membership in 1920 in the national organization num-

bered 559,315 of whom 100,000 were girls between the ages of 12 and 18 enrolled in the Girls Reserve Corps of the Association. The headquarters of the National Board are in New York City, besides which there are branch offices in Philadelphia, San Francisco, Richmond, Chicago, St. Louis, Denver, Dallas, Minneapolis, Seattle, and Cincinnati. These cities are headquarters for field committees which the National Board appoints to represent it in various sections of the country. Each field committee employs a staff of secretaries to do the direct work of organizing local associations and to aid in developing the activities for girls and women which form the general Association programme. At the end of 1920 there were 185 field secretaries being employed. Figures for Jan. 1, 1921 show that there were 347 city associations in 234 cities, 78 town associations, 27 county associations, and 711 student associations. The national programme includes classes in Bible and mission study, physical training, commercial subjects, language study, domestic arts and sciences, vocational training, elocution, and dramatics, trained attendance, business law, parliamentary law, and current topics; clubs: recreational, musical, and social; management of cafeterias, boarding residences, housekeeping apartments, room registries, residential and transient hotels, summer camps, vacation homes, employment bureaus, health centres, and home investigation bureaus. Special attention is given to industrial workers, colored women, Indian women, business and professional women, women of foreign birth, and students. In 1920 the National Board conducted 40 10-day summer conferences for girls, with a total attendance of 10,840. A national training system to prepare young women for executive positions is maintained. Part of this course must be taken in residence at the National Training School, 135 East 52nd St., New York City.

The National Board has extended its work into the foreign field so that in October, 1920, it had 59 centres in Europe and the Near East with 118 secretaries, and in the Orient and South America 32 centres with 118 secretaries.

The official organ of the National Board is the *Association Monthly*. The officers in 1920 were: President, Mrs. Robert E. Speer; chairman executive committee, Mrs. John French; secretary, Mrs. Lewis H. Lapham; treasurer, Mrs. Samuel A. Broadwell; and general secretary, Miss Mabel Cratty.

YUKON. A territory of Canada, bounded by Alaska on the west and the Northwest Territories on the east and extending from British Columbia at the 60th parallel to the Arctic Ocean. Area, 207,076 square miles, of which 649 are water; pop. in 1911, 8512; capital, Dawson with a pop. in 1911 of 3013. Commissioner in 1920, George Black. See CANADA.

ZANZIBAR. A British protectorate of east Africa, comprising the island of Zanzibar (640 square miles), the island of Pemba (380 square miles), and several islets; situated off the coast of the former German colony of German East Africa. Population of Zanzibar, (1910) 113,624; of Pemba, 83,109. The Europeans numbered about 200. The chief town is Zanzibar with a population of about 35,000; and it is one of the best African ports. The natives for the most part are Mohammedans. The industry is mainly limited to the production of cloves of which the output in 1918-9 was £24,980,977. Imports,

1917-8, \$11,516,036; exports, \$10,383,149. Sultan, in 1920, Seyid Khalifa bin Harub (born in 1879); high commissioner, Major-general Sir Edward Morthey.

ZAZA. See MUSIC, *Opera*.

ZINC. The production of primary metallic zinc from domestic ores in 1920 was about 449,000 tons and from foreign ores about 14,000 tons, a total of 463,000 tons, compared with 452,272, 13,471, and 465,743 tons, respectively, in 1919. Of the output of domestic zinc in 1920 about 51,000 tons consisted of electrolytic zinc, as compared with 27,056 tons in 1919. In addition to primary zinc there was an output of about 20,000 tons of re-distilled secondary zinc, compared with 19,748 tons in 1919, making a total supply of distilled zinc and electrolytic zinc in 1920 of 483,000 tons, of which 81,000 tons was high grade zinc, 34,000 tons intermediate, 51,000 tons select and brass special, and 317,000 tons prime western. The production of the corresponding grades in 1919 was 45,377, 39,173, 146,917, and 260,024 tons, respectively, a total of 485,491 tons. Of the total output of primary zinc in 1920, about 111,000 tons were made in Illinois, as against 118,340 tons in 1919; 42,000 tons in Kansas, as against 43,942 tons; 110,000 tons in Oklahoma, as against 121,988 tons; 30,000 tons in Arkansas, as against 31,437 tons; and 74,000 tons in Pennsylvania, as against 67,521 tons.

The exports of zinc made from foreign ores were about 28,500 tons and those of zinc made from domestic ores were about 86,000 tons, compared with exports of 16,789 and 129,508 tons respectively in 1919. The exports of domestic zinc at smelters and in warehouses at the end as against 19,762 tons in 1919. The stock of zinc at smelters and in ware houses at the end of November was about 61,509 tons, as against 29,892 tons on June 30, 1920, and 36,793 tons at the end of 1919. The apparent consumption of primary zinc during 1920 was about 324,000 tons, compared with 323,964 tons in 1919 and 423,792 tons in 1918.

The recoverable zinc content of ore mined in 1920 was about 597,000 tons, compared with 557,000 tons in 1919 and 632,243 tons in 1918. The output of the Eastern States was about 102,000 tons, that of the Central States about 343,000 tons, and that of the Western States about 152,000 tons, compared with 122,000, 305,000, and 130,000 tons respectively in 1919. The gain in the output of the Central States was made possible by an increase of nearly 50,000 tons in the Joplin district, and the gain in this district was chiefly the result of an increase in the output of Oklahoma, which reached a total of about 209,000 tons, the largest zinc output ever made by a single State, but Kansas also made a good gain, producing over 68,000 tons. In 1919 Okla-

homa produced 178,410 tons and Kansas 47,620 tons. In 1920 Montana (Butte district almost wholly) apparently produced about 102,000 tons, as compared with 84,382 tons in 1919, and the New Jersey output declined to about 78,000 tons from 92,912 tons in 1919. The output of the upper Mississippi Valley was about 37,000 tons, as compared with 47,553 tons in 1919.

The imports of zinc in ore increased from 17,009 tons in 1919 to about 23,000 tons in 1920. The zinc content of ore imported from Mexico increased from 11,225 tons in 1919 to about 16,000 tons in 1920. Australia furnished ore containing 3,852 tons of zinc and Canada and other countries sent smaller quantities. The zinc content of zinc ore in bonded warehouses on November 20 was 25,642 tons.

FOREIGN ZINC INDUSTRY IN 1920. Of the European zinc-producing centres Belgium and Upper Silesia seemed to be in the best condition. Belgium started the year with a smelter output of about 4,500 short tons monthly, which it brought up by the middle of the year to about 8,000 tons. After that the output remained about stationary, so that the total production for the year was probably about 90,000 short tons. Reports near the end of the year indicated that the output is slackening and considerable stocks are on hand. The total stocks in Europe were thought to amount to 100,000 short tons. Belgian smelters had recently contracted for a supply of Australian zinc concentrates. The zinc output of smelters in Upper Silesia in 1919 was 81,596 short tons, equal to about 60 per cent of the production in 1918. Reports for the first half of 1920 indicated a little larger production than in 1919, the output for the six months being 49,643 short tons. The zinc industry in other European countries and in Japan was reported at a low ebb. Perhaps the most noteworthy happening in the zinc industry during the year was the acquisition of the Mount Read and Roseberry mines, Tasmania, by the Electrolytic Zinc company of Australasia, by which that company gained immense reserves of ore. The enlargement of the electrolytic zinc plant at Risden, near Hobart, Tasmania, continued, a zinc rolling mill and a zinc oxide plant having been installed.

In Europe although zinc production was less than before the war, the purchasing power of the manufacturing nations was unable even to take care of this amount, much less what was exported or held for export from America. At the beginning of the year it was believed that the exports of spelter from the United States would run up to 100,000 tons, and prices and production were arranged on that basis. Spelter which had been steadily rising from June 1919 scored a high record in January, 1920, with an average for that month of 9.62 cents per pound at New

UNITED STATES PRODUCTION OF ZINC 1915-1920

From Engineering and Mining Journal

(In Tons of 2,000 Lbs.)

By Ore Smelters Only

* Includes Anaconda and other electrolytic production in 1915.

York from which with a temporary rally in August it steadily declined to about 6 cents in December. In like fashion the year started with a high rate of production although there were numerous strikes at the smelters, but this decreased in the second half of the year and was accompanied by decreased efficiency in labor which was able clearly to sense the prevailing situation. In 1920 it was stated that at a plant working under usual conditions the smelting of a ton of ore required $7\frac{1}{2}$ per cent more labor paid for at a rate $2\frac{3}{4}$ times greater while the extraction obtained had fallen from 88 per cent to about 82 per cent. Coal also cost more as did other supplies, but the newer mines of Oklahoma were able to produce concentrates from rich ores which made the output as regards price compare with conditions before the war. See METALLURGY.

ZIONISM. See JEWS.

ZONING. See CITY PLANNING.

ZOOLOGY. Earlier YEAR BOOKS have noted the expedition to the African Congo sent out by the American Museum of Natural History in New York City in 1909 to 1915. A survey of the collections made on this expedition showed that there were 6,000 specimens of mammals, birds and fishes, 500 reptiles and batrachians, and 100,000 invertebrates. Materials for preparing mounted groups of the Okapi and of the Square Lipped Hippopotamus were also obtained.

Slotopolsky *Zool. Anz.*, Aug.) discussed the question of natural and accidental death in the sense in which this distinction was made by Weismann, and concluded that the Protozoön has a certain portion of its plasma set apart for reproduction and this part is therefore, immortal; just as a similar separation has been supposed to occur in the Metazoa.

Orton (*Jour. Marine Biol. Ass. of United Kingdom*) reviewed the conditions of breeding in various marine organisms and concluded that temperature is the most important single factor, being more important than food, which indeed, seems to have little influence. Herdman, in his address as President of the Zoölogy section at the meeting of the British Association, discussed the generally held opinion that arctic pelagic life is more abundant than either temperate or tropic. Herdman's opinion was that variations in oceanic currents are of more importance in this connection than are differences in latitude. It seems true, however, that the greater abundance of individuals of any species in the colder waters is due to the slower rate of metabolism at these temperatures, and a corresponding greater duration of life for the individual.

The Gifford Lectures delivered in 1915 and 1916 at the University of St. Andrew by J. Arthur Thompson have been published in book form under the title of *The System of Animate Nature*. Under the general heading of "The Realm of Organisms" Professor Thompson took up such topics as the "criteria of livingness," "animal behavior" and "adaptiveness and purposiveness," in which discussion he takes a decided stand against the extreme mechanistic interpretation of vital phenomena, citing such cases as the migration of birds, and examples of the regulation and readjustment of developing eggs both under normal and under experimentally determined conditions. The farther we go into developmental mechanics the more do we recognize that physical and chemical processes are in evidence, but at the same time we do not

get appreciably nearer a mechanical description of development. Part 2 dealt with the "Evolution of the Realm of Organisms." In this he agreed with the modern school of Mendelians in their general conclusions as to the mechanism of the hereditary processes. He argues that Heredity has three functions:—(1) to secure the persistence of a specific dynamic organization; (2) to shelter the specific organization from the influence of parental modifications; (3) to allow of appearance and persistence of variations. He adopted the theory of sexual selection, believing that this process, involving elaborate courtship activities, has influenced bodily structure and behavior in ways not now fully recognized. He said that Darwin meant by sexual selection all "sifting in connection with mating, whether the female held the sieve or not," and thought that future students will give this theory more, rather than less, importance.

In the series of Monographs on Experimental Biology (see YEAR BOOK for 1919) two volumes appeared in 1920: "Inbreeding and Outbreeding" by East and Jones, and "The Nature of Animal Light," by Harvy. (See below) East and Jones discussed the question whether, as has generally been believed since Darwin's time, inbreeding in plants and animals is in itself injurious to the race, citing results of this inbreeding from the literature relating to both plant and animal heredity. In some instances (that of maize seems to be one of the most extreme) the immediate results of inbreeding are found to be not only injurious but often disastrous, though this does not happen in all cases. When the question is asked whether inbreeding is injurious simply because of the consanguinity, the answer is "most emphatically no." If unfavorable traits appear after inbreeding it means simply that they were originally present but were concealed by other characters. The authors believe that all inheritance is in accordance with Mendel's law, and in this it is evident that characters originally not in evidence because concealed by other characters may through recombinations make their appearance. Two results might follow. Since these characters are thus made evident, it should be possible for the breeder to eliminate them from the race; and on the other hand, the favorable characters could be freed from attachment to these unfavorable ones, and thus the race improved. Whether inbreeding is or is not injurious depends, then, entirely on the composition of the hereditary material of the breeding organisms. Heterosis or outbreeding, or crossing of distinct races (in cases where normal hybrids are obtained) often results in an increase in vigor of the offspring over that of their parents. East and Jones explained this on the assumption that each parent has some genes which make for vigor and some which tend to reduce this vigor. In crossing, both vigor-producing genes are brought together in the hybrid and being dominant, affect the character of this hybrid. Later generations, because they tend to repeat the genetic composition of the original parents in consequence of a redistribution of the genes may lose some of this vigor. Any individual which happened to be homozygous for the vigor-producing genes, and happened to mate with another of similar composition, would establish a vigorous race, but this combination would very rarely be accomplished. The authors conclude that the mechan-

isms which are provided for cross fertilization are to be explained as devices for producing variations, thus giving natural selection materials on which to work.

So far as human inheritance is concerned, the authors reach the same general conclusions as those given by recent experimenters that if there is nothing injurious in the germ plasma, close inbreeding is not at all undesirable, but that such inbreeding is apt to bring to the front defects which otherwise might remain hidden.

As stated above, Harvey, in a volume of the series of Monographs on Experimental Biology, discussed the "Nature of Animal Light." A few plants and many animals are luminescent, and Harvey gave a list of animals in which this phenomenon has been described, showing that in this list the distribution of luminescent animals is very erratic and does not follow any evolutionary order. The light of the firefly, so far as energy is concerned, is 100 per cent efficient, but would not be a satisfactory source of light for the human eye, since its maximum does not correspond with the maximum of sensitivity of the human eye, and since all objects seen in it are of a uniformly green hue. Light from animal sources differs from that from ordinary sources only in intensity and spectral extent. The exact function of the light in nature is not always evident. In the fireflies it seems to be a means of sex recognition, but in other cases no explanation based on experimental evidence is available. It may attract positively phototropic animals which are food for the luminous animal, toward the source of light, and it may in animals which live in the dark, serve as a means of illumination for guidance in walking.

Chemically the luminescence is produced by oxidation of a substance, *luciferin*, in the presence of an enzyme-like body, *luciferase*. These substances differ in different animals so that it is better to refer to them as the "*luciferases*" and the "*luciferins*." Contrary to earlier assumptions, neither of these substances has a fatty composition. Other chapters of the book give a detailed account of the chemistry of this process of light production (see YEAR BOOK for 1917). Hess (*Anat. Record*, Jan.) described the tracheation of some fireflies, and found that no new branches of the trachea supply the light organs, but that in the somites where the light organs are located these tracheal branches are of excessive size. They are not only larger but have a more profuse mode of branching, seemingly in connection with the need of supplying extra air to these organs. In the males of some species of fireflies, the longitudinal tracheal connectives in the somites with the light producing organs do not connect with the tracheal trunks of these somites, but become greatly branched and supply air directly to the light organs.

HEREDITY. As previous YEAR BOOKS have indicated, our present-day research in Genetics is based on various developments of Mendel's law, and the results obtained especially by Morgan and his colleagues have shown a great probability, amounting almost to a demonstration, that the genes or hereditary units which act as determiners have a very definite distribution along the chromosomes of the sex cells. Objection to the theory of crossing over (see YEAR BOOK for 1915), which plays a very large part in the explanation given by Morgan for the behavior of some of these genes, has been made that the

peculiar chromosome union known as the "chiasma type" which is pre-supposed in Morgan's explanation has really been found in too few cases to justify the importance assigned to it. Wilson (*Amer. Nat.* May-June) discussed the recent work of Janasens as bearing on this point, and concluded that this chiasma type does occur, though as a matter of fact, the evidence for it seems to be derived more from genetics than from cytology. Castle (see YEAR BOOK for 1919) held that the data given by Morgan indicated that the arrangement of the genes could be better explained by a three-dimensional figure than by arrangement in a straight line, as Morgan supposed. Morgan, Sturtevant and Bridges; and Metz (*Proc. Nat. Acad. Sci.*, Apr.) declined to accept this explanation, and gave reasons for their belief that Castle's argument was based on a misunderstanding of the data.

New varieties of the fruit fly, which has been the animal most studied, furnish the material for crossing experiments, and arise by mutation. Bridges (*Biol. Bull.*, Apr.) stated that extreme mutations are often poor in viability, and while this may be partly corrected by better culture methods it is in general true that mutants of low variability are more viable than those of high, and that these are fortunately the bulk of the non-lethal mutations. These latter are as definite in character and offer as great precision in classification as extreme mutations. This he illustrated by a description of "white ocelli," a mutation which affects the ocelli on the back of the head of the fruit fly. Muller (*Jour. Exp. Zool.*, Nov.) described more mutations of the white eye color in *Drosophila*, making 10 in all. In this case, minute deviations seem very infrequent. Mutation seems to occur in only one member of a pair of allelomorphs (i.e. mutually opposed characters) at a time.

Wodsedalek (*Biol. Bull.*, May) described the chromosomal character of the sex cells of cattle, finding that there is here a sex chromosome, which is paired in the female but single in the male. All of the ova contain one X chromosome and only half of the spermatozoa have one. Ova fertilized by the X-containing spermatozoa develop into females, while those fertilized by the spermatozoa without an X become males. Thus sex is determined at the time of fertilization, and is not, as has been suggested, modified by the time during the heat period when the female is served. Shaffer in Cicada (*Biol. Bull.*, June), Taku in Squilla (*Jour. Morph.*, Sept.) and Harmon in the Tettigidiidae (*Biol. Bull.*, April) described various phases of the chromosomal history of the germ cells. Firket (*Anat. Rec.*, Apr.) stated that in the chick and in the white rat there are two generations of germ cells, the primary and the secondary, having a different mode of origin. The former, probably in the chick and certainly in the rat, do not give rise to definite sex cells, but degenerate, showing that they are cells in "phylogenetic degeneration."

A truncate character of wing in *Drosophila* had seemed to be impossible to harmonize with the concept of a relatively fixed gene, since it appeared in a very variable fashion, and Morgan had been unable after four years of selection, to reduce the production of normal below 10 per cent. Altenburg and Müller (*Jour. Genet.*, Jan.) recorded experiments showing that this truncate appearance is really produced by three factors, t_1 , t_2 , t_3 , of which t_1 and t_2 act as intensifiers for

t_1 and the truncated character does not show unless t_2 is present. T_1 and t_2 may be present, but do not produce any observable effect without t_1 . T_1 acts as a lethal when homozygous, and this fact explains the inconstancy of the effects obtained when studying selected stock. So and Imai (*Jour. Genet.*) found two factors in the spotting of the coat color in mice, one factor being lethal when homozygous as is the case in yellow mice. Owing to the presence of the two factors a continuous series of stages from dark-eyed white, through spotting, to self-color may be produced. Bridges and Morgan (*Carnegie Inst. Pub.*, 278) described thirty-nine mutant characters whose genes lie in the second chromosome and are especially convenient as tests in crossing, while in this same chromosome Sturtevant (*Carnegie Pub.*, no. 218) found two genes which affect the amount of crossing over, usually decreasing it. Morgan (*Carnegie Pub.* no. 278) carried on mass selection on a character called "notch" which produced a notched wing, and his results apparently indicated an increase in the direction of the selection. Further experiments showed, however, that this is not due to a modification of the notch gene, but to the presence in the second chromosome of a recessive modifying factor. Outbreeding with wild flies would bring back this notch character, even in strains where it had disappeared.

The chromosomal theory of heredity is based on the assumption that in fertilization and cleavage the chromosomes derived from the two parents do not fuse, but each divides independently of the other and each of the resulting nuclei thus contains half of each parent chromosome. Smith (*Anat. Rec.* 17) found that this history of the chromosomes can be demonstrated in the amphibian *Cryptobranchus alleganiensis*, where the two can be traced as distinct up to the gastrula stage.

Interesting applications of the results obtained by the study of the character and behavior in breeding, of the chromosomes to the solving of other problems has been made especially by Morgan. In *Carnegie Publication* No. 285 Morgan takes up the question of Sexual Selection, as an explanation of the sex differences between male and female, especially in birds and insects, a theory advocated by Darwin but not now generally accepted. Morgan prefaced this discussion with an explanation of some results obtained in experiments on the Sebright Bantam, a fowl in which the male has the characteristic comb and wattles of the cock bird, but is without the typical male plumage, and is known as the "hen-feathered male." In all but one case, (this exception was not fully explained), castration of this hen-feathered male was followed by a diminution in the size of comb and wattles as is usual after castration, but there was at the same time a development of typical male feathers. Microscopical examination of the testes of this Sebright race showed the presence of luteal cells which do not occur in the testes of other races, and it seemed probable that secretions from these cells suppress the secondary sexual characters so far as these should appear in the plumage. Starting with the sexual selection theory as stated by Darwin, Morgan discussed various explanations that have been given for the secondary sex differences, and concluded that the conditions which call these forth are so diverse in different groups of animals that it seems unlikely that

such a single cause as choice by the female could have directed their evolution. In many cases the genetic composition of a highly ornamented male and of the female without this ornamentation differ only in that genes in a particular chromosome are simplex in one sex and duplex in the other. Owing to this initial difference the female bird produces an internal secretion that suppresses in her the male ornamentation, and in the mammal some secretion formed by the testis causes the full development in the male of the secondary sex characters. We are coming to recognize, Morgan said, that hereditary genes have more than a single effect on the characters of the body, and thus the secondary sex characters may be only by-products of genes whose important functions lie in some other direction.

In a later paper (*Biol. Bull.*, Oct.) Morgan described similar results in experiments on the "Campine" race of poultry, in which the hen feathered male may assume the cock feathered condition as a result of castration. The operation of castration is dangerous in the adult bird, often causing death through hemorrhage. To avoid this, he experimented by ligaturing the testes at their attachment to the body wall, and found that this gave the same results as castration. If, however, any fragment of the testis is left, the complete plumage change will not take place.

Morgan and Bridges (*Carnegie Publication* No. 278) discussed the problem of gynandromorphism in insects (cases where one part of the body is male and the other female). The history and the genetic composition of the individuals studied was known, and it was thus possible to formulate an explanation based on this composition. The experiments were performed on the fruit fly, *Drosophila*, in which the female has two and the male one, X chromosome: and the sex-linked characters connected with these X chromosomes had been to a large extent determined. It was possible, knowing through experiment, the genetic character of the individuals, to demonstrate that both the female and male parts of the gynandromorph contain the same autosomal group of chromosomes (i.e. chromosomes not X). The sex organs of the two sides are always alike, the differences between the two parts of the individual being entirely in bodily structure. The explanation offered is that in an early cleavage one of the X chromosomes fails to pass over to one of the daughter plates, and thus one half has two X's and is female, while the other has one X and is male. Since, usually, large areas of the body are involved in these cases of gynandromorphism, it seems probable that this elimination takes place at an early division, but it is possible that if smaller areas did occur they might be easily overlooked, so that there is no evidence that this aberrant division may not take place at any stage. Crozier (*Am. Nat.* Jan.-Feb.) described a salmon pink color in a female *Chiton tuberculatus* from Bermuda, a sex distinction which can have no selection significance but is due to bodily metabolism during the development of the ovary.

Morgan (*Am. Nat.*, May-June) recorded observations on the fiddler crab, showing structural conditions intermediate between the male and the female individuals in the character of the claws and the abdomen. Morgan compared these conditions with similar structures on other animals and while he did not attempt an ex-

planation he evidently thought the condition is due, in some cases at least, to irregularities in chromosomal behavior.

Vaulx (*Compt. Rend. Zool. Soc. France*) discussed the question of intersexuality in Cladocera, and the recent attempts of Morgan to explain it as conditioned by the X chromosome (see above) and of Goldschmidt (andrase vs. gynase. See YEAR BOOK for 1917); and decided that none of these theories apply to the cases he studied. In these we must assume a combination effect produced by changes in sex dominance in different parts of the body. There is, he thought, a general sex instability due to a variety of causes.

Evidence that selective breeding experiments do not develop any more extreme individuals than were present at the beginning was shown by MacDowell (*Jour. Exp. Zool.*, May), in *Drosophila*, where he selected for forty-nine generations for an increased number of bristles. In the early generations the high-grade parents produced rather better offspring than did the low-grade, but this was not the case in the later generations. After the forty-ninth generation selection was suspended, and later generations showed that there was no tendency for the high-grade parents to produce any higher grade offspring than did the low-grade parents. Selection reduced the amount of genetic difference between the germ-cells, but there was no evidence that any genetic differences not present at the beginning had been operative. Cases where continued selection seemed to have modified the genes of a race have been explained by the Mendelians as really due to multiple factors which become separated as a result of the selection, and give rise to apparently new characters. Sumner (*Jour. Exp. Zool.*, April) in a study of geographical variations of the mouse *Peromyscus maniculatus* and the results of crossing these races, concluded that the variability which appears in later generations is due to the fusion of the parental characters, giving rise to a perfect blend. He admits that this might be explained on the multiple factor hypothesis, but held that the other explanation is the more reasonable.

Davenport (*Am. Nat.*, March-April) argued that the non-appearance of twins in human births is due to lethal factors in the spermatozoa, and that the appearance of twins indicates that the spermatozoa are physiologically more active.

Duerden (*Am. Nat.*, July-Aug.), described callosities on the sternum and pubis as well as in other localities in the ostrich, and showed how these might arise in each individual as a direct result of pressure on these parts during the ordinary activities of the bird. Study of the embryo showed that these callosities are present before hatching, giving the appearance of the inheritance of an acquired character. Duerden regarded this as really such an inheritance, though not one represented by a germinal variation. Since the ability to form callosities is possessed by all parts of the body, this really represents merely a new relationship set up between factors already present resulting in an earlier appearance of the character in question.

INTERNAL SECRETIONS. Steinach (*Archiv. F. Ent.* Vol. 46) discussed the results obtained by him in transplanting ovaries into the body of a castrated male, and, *vice versa*, transplanting testes into the body of a castrated female. In all of these cases the animals took on the bodily

and mental characters of the opposite sex, showing that these sex characters are due to sex hormones. The hormone of one sex produces its appropriate sex characters and inhibits those of the other sex. Hermaphroditism must in all cases be referred to a condition in the embryo where the separate sex gland did not fully differentiate, and a castrated young animal does not develop normal adult sex characters. If a testis be implanted under the skin of a male, the sperm cells degenerate, but the mass of interstitial cells remain, and under the influence of the secretions from these the animal will equal or surpass normal ones in growth and sexual power. Similar results follow similar experiments on the female. Can we then, by implantation renew youth? Steinach says that we can. By opening the animal and ligaturing the vas deferens, the sperm cells will be caused to degenerate, but since the interstitial cells remain, the animal renews its youth. Steinach records the clinical history of three cases in man, where by this operation completely senile men had been restored to full sex vigor. Harms (*Zool. Anz.*, Aug.) reached precisely similar conclusions as a result of his experiments on guinea pigs, where transplantation of pieces of testes under the skin of senile pigs, resulted in a renewed sexual vigor lasting for six months.

In the YEAR BOOK for 1919 mention was made of the results of removing the pituitary body of the frog. Similar experiments were recorded by Smith (*Amer. Anat. Mem.* No. 111), who removed the pars buccalis of the hypophysis, with the result that changes appeared in the pigmentation, the growth rate, and in most of the other endocrine organs. The young frog is albino and has a slow growth rate. A diet of the fresh anterior lobe replaces the principle lost by the operated frog, and this has a practical value in that the treated frog may be used to test preparations of the anterior lobe for the presence or absence of the growth principle. Alcoholic and aqueous extracts of the gland do not possess this, but it is present in the residues. Masaglia (*Endocrinology*, Oct.-Dec.) gave further evidence that the testis of the male fowl produces a secretion which determines the male instincts and plumage. Pezard in the same Journal, discussed the results of various experiments, in which he shows that the maintenance of the sex characters depends on the constant presence of a minimal amount of testicular parenchyma. If this minimal amount is present, the characters appear, but beyond this point there is no relation between degree of development of the characters and the amount of the gland.

PROTOZOA. Landes (*Am. Nat.*, Sept.-Oct.) described an amiconucleate race of paramoecium and pointed out that since in all described cases the micronucleus is an important organ in conjugation, this discovery will be an important one for further research. Evidently a type of reorganization must occur here which is very different from any yet observed. Woodruff and Erdmann (see YEAR BOOK for 1917) described a process of endomixis in Paramoecium. Erdmann (*Archiv. f. Entwick.*, 46.1) reported on further studies, giving the results of an elaborate statistical study of size inheritance in this genus. She concluded that heritable variations in size can occur without conjugation. "The rigid conception of the genotype does not hold for Protozoa."

Taylor (*Publications of Univ. of Cal.* 19) described a neuromuscular apparatus in *Euplotes patella*, in the form of a fibrillar system which is neither contractile nor supporting, but does possess conductive properties functioning in the coordination of the movements of the locomotor organelles with which they are intimately associated. Kofoid (*Univ. of Cal. Pub.* 19) reported on a new study of *Noctiluca* and concluded that this is really a Dinoflagellate much modified through distension by hydrostatic vacuoles. So far as this genus is concerned, the order Cystoflagellate does not exist, though it may be retained for such forms as *Leptodiscus* and *Craspedotella*.

PORIFERA. Van Tright (*Rev. in Biol. Cent.*, Jan.) gave results of study on the biology of fresh water sponges. The green cells in these sponges are not symbionts, but food, or at least an intermediate stage between symbionts and food. The water stream, which is often very rapid, is kept going by the action of the flagellae of the flagellated cells (choanocytes.) Digestion takes place in the amoebocytes, sometimes in the protoplasm and sometimes in vacuoles.

COELENTERATES. Hickson, (*Quart. Jour. Mic. Sci.*, July) described observations on *Protohydra*. This genus was first found in England in 1868 at Ostend, and rediscovered in 1891 and 1892. It was later found at Southampton and has been studied there by Hickson for the past four years. It occurs only in estuarine pools where the sea water comes in only at spring tides. Parker (*Jour. Exp. Zool.*, Nov.) described activities of *Renilla*, in which two separate forms of peristaltic movement occur, one in the peduncle and one in the rachis. One of these tends to depress the colony into the sand, the other to raise it out. At night, but not by day, this coral is highly luminescent, the luminescence being located on the dorsal surface of the rachis. The activities of *Renilla* are colonial, not zooidal, the zooid being dominated by the colony.

Komai (*Annot. Zool.*, Japan), described the anatomy and embryology of *Coeloplana bocki*, and concluded that this represents a highly specialized form of the Ctenophora derived from a Cydippid ancestral form, by the loss of old characters and the acquirement of new ones in adaptation to a change of life from pelagic to creeping. The entire creeping surface was derived by the turning out of a large part of the inner pharyngeal surface of the ordinary Cydippid. In a later paper in the same journal Komai described a parasitic coelenterate living in *Salpa* and showed that it is without doubt a degenerate Ctenophore.

PLATHELMINTHES. In the so-called digenetic trematodes, which have two hosts, and a different phase of the parasite in each host, it is customary to speak of this as alternation of generations. Kathariner (*Zool. Anz.*) concluded that it is incorrect to speak of this as an alternation of generations, for the cells from which the cercaria generation develop are a part of the original fertilized egg, which have passed unchanged through the earlier stages and have begun to develop here. Thus there is no break in the continuity of the germ plasma.

NEMERTINEA. Coe (*Biol. Bull.*, July) described sexual dimorphism in some of the pelagic nemerteans where the sex differences are so great that male and female have been described as of different genera. In *Nectonemertes* for example,

the male has a pair of long muscular tentacles which extend laterally from the body walls directly back of the head. These are used for locomotion, but their chief function seems to be to hold the female during insemination.

ANNELIDA. Lippo (*Biol. Cent.*, July,) described experiments on the reproduction of *Stylaria*, the fresh water annelid, where both reproduction by fission and sex reproduction occur. He was unable to discover that either feeding or removal of water in any way stimulated the beginning of the sex reproduction, but did decide that an increase in temperature to 18° to 20° would have this effect. Where sexual individuals are found in the cooler months as in October, it simply means that the sex organs have been carried over from the warmer time. In animals put into a warm room from a cold one this change does not take place, but it does in buds that have been given off from animals which have been thus transferred. The ability to form buds ceases with the formation of the sex organs, and the animal dies after egg laying.

MOLLUSCA. Piéron (*C. R. Soc. Biol.* 82) stated that limpets which live attached to rocks, show a topographical memory for their particular site. They feel over the surface of the rock with their cephalic tentacles, and to a certain extent with their pallial ones. Kinesthetic memory, gravity, and illumination also coöperate in this process.

CRUSTACEA. Cowles (*Proc. Acad. Nat. Sci.* Jan.) described a transfer of a sea-anemone from one shell occupied by a hermit crab to another shell when the animal itself changed its dwelling. The anemone which was attached to the first shell was loosened from its attachment by the claw of the crab, and eventually put in place on the new shell. The process was a slow one, and involved much pulling about of the anemone.

INSECTA. Uichanco (*Philippine Jour. Sci.*) described some Philippine termites which make nests rarely over two metres high. Beneath an outer crust of clay they grow coral-like fungus gardens. These mushrooms may break through to the surface and are eaten by man. In the swarm of this termite there are about five females to one hundred males. Edwards (*Ann. Mag. Nat. Hist.* 9, vi. 34) described some midges which when flying seemed to be extremely long. Examination showed that when flying these insects evert from the sides of the abdomen very long tubes. He found such tubes occurring also in a number of related species, and made the suggestion that possibly they are scent organs, functioning as recognition means in mating. Seguy (quoted in *Parasitology*) reported that in France the larvæ of house flies may bore their way into the bodies of snails and spend the winter there. Bresslau (*Biol. Cent.*, Aug.) found in the larvæ of a number of German mosquitoes a peculiar egg tooth on the dorsal surface of the head of the larva. This is used to cut off the top of the egg when the larva is hatching, and is later lost in the first moult. Denning (*Nature*, May) recorded observations on wasps in England. The queens appear at the third or fourth week in April and look for places to build nests. Denning lists *Vespa germanica*, *V. rufa* and *V. vulgaris*, but does not say on which his observations were made. In a month the queen will make 1136 journeys to get material for food and to build the nest. The young queens leave the nest in August and September. A strong nest had

1118 queens and 995 drones. A small nest of *V. germanica* killed 2000 flies in one day and Denning estimated that a strong nest would kill about 12 times as many. Brues (*Am. Nat.*, July-Aug.) stated that in the choice of plants as food by insects several factors are involved: (1) Odor and taste of plant, as is indicated by the use by the same insects of several members of the same plant family, where there must be a similarity of taste; (2) a somewhat similar recognition method but based on less obvious odors or tastes than the above; (3) similarity in the immediate environment or general form of food plant; (4) chance associations which have become fixed. Mrs. Goodrich (*Quart. Jour. Mic. Sci.*, June) showed that in the practical work of studying bee diseases, it is often difficult to decide whether a bee died of disease or of old age. Preliminary studies which she has made indicate that the condition of the nerve cells and that of the glands are good criteria. Bishop (*Jour. Exp. Zool.* 31, 2) described the sex organs of the honey bee and the method of sperm transfer. The male is unable, for at least nine days of imaginal life, to fertilize the female, owing to the immature condition of the sex organs. In copulation, a mucous secretion follows the sperm, forcing these farther into the body of the female, and then hardens, forming a plug behind the sperm when the male organ is torn away. Since mating always takes place in the air, this description was drawn following an examination of the female organs before and after copulation.

ARACHNIDA. Although the statement has been made that the Solifugidae have no tactile organs, Dahl (*Zool. Anz.*, Aug) stated that they have well developed sensory (tactile) hairs, imbedded in the chitinous outer layer of the body. A nerve carrying a ganglion near its outer end enters this hair, and even a mild movement of the outer end of the hair will cause a considerable stimulation of this ganglion. Beside these sense hairs are other stouter structures which do not connect with nerves and are evidently not sensory. Probably they are simply protective and possibly aid in catching food. Other finer hairs seem to have as their function the keeping of water from the surface of the body, and there is another form, easily vibratile, which may have to do with tone perceptions.

FISHES. Lee (*Nature*, Sept.) stated that while confusing details often occur in the markings on the scales of fishes, so that it is sometimes necessary to study a considerable number in order to reach accurate conclusions, it is true that up to 5 or 6 years of age, the rings on the scales give an accurate indication of the age of the fish. This may be determined even on canned fish. Gilchrist (*Quart. Jour. Micro. Sci.*, July) described a form of ecdysis in a fish, *Agriopus*. The outer layers of the epidermis become striated and form a columnar structure which is thrown off. A description of the microscopic structure of this layer is given in the paper. Thilo (*Zool. Anz.*, Aug.) described the shifting of the eye in a plaice, giving a detailed description of the mechanics of this process. In many individuals the process is imperfect and the lower eye is lost.

Reighard (*Biol. Bull.*, Jan.) described the breeding habits of the suckers *Catostomus commersoni*, *Moxostoma aureolum* and *Hypentelium nigricans*, all of which breed in swift water in small streams with a gravel bottom. In all, the males have pearl organs at the breeding

seasons, and in the last named species the female also shows them. Reighard thought that these are used as holding organs to enable the sexes to remain together in the running water. There is no definite pairing in any of these species, the female mating with two males at a time in the first two species and with as many as six in the last, and she may mate several times. The eggs are scattered over the whole spawning ground.

MAMMALS. Hartman (*Anat. Rec.* 19.5) reported that, contrary to the usual belief, the young opossum after a period of gestation of ten days, finds its own way to the pouch on the abdomen of the mother and is not assisted by her in this process.

ZORN, ANDERS LEONARD. Swedish sculptor, died August 22. He was born in Sweden, Feb. 18, 1860 and was educated at the Academy of Fine Arts at Stockholm. He travelled on the continent and in England, painting at first in water colors. He acquired the art of etching while in London, and in 1888 began to paint in oils. His "Fisherman from St Yves" was bought by the Luxembourg a little later, and in 1889 his portrait of himself was taken by the Uffizi in Florence. He received the gold medal at the Paris Exhibition in 1889. After 1893, he visited the United States several times and painted portraits of Americans. His chief work is the statue of Gustavus Vasa at Mora in Sweden. He painted portraits of various Americans and nearly all the members of the Swedish royal house. Among them may be mentioned: King Oscar of Sweden (1898); King Charles of Sweden (1898); "Harald Wieselgren" (1900, National Gallery, Berlin); "Coquelin Cadet"; "Portrait of the Artist" (Stockholm Museum); and "The Toast." Among the figure compositions: "Baking in Mora" (1889); "Night Effect" (Gothenburg); "Summer in Sweden" (National Gallery, Berlin); "Midsummer Night Dance at Dalecarlia" (1897, National Museum, Stockholm). Later works are: "Dagmar"; "Matins on Christmas Day"; "Watering the Horse"; "Nude" (Metropolitan Museum, New York); "Started" (1912). Among his famous etchings are those of Renan, August Strindberg, Paul Verlaine, Anatole France, and the "Portrait of the Artist and his Wife." Besides the statue of Gustavus Vasa above mentioned his more famous sculptures include "Alma"; "Grandmother" (1892); "Faun and Nymph" (1896, bronze statuette). See J. N. Laurvik. *Anders Zorn* (New York, 1913).

ZULULAND. A portion of the province of Natal in the Union of South Africa. It was annexed to Natal, Dec. 30, 1897. Area, 10,424 square miles: pop. (1911), 219,606.

The inhabitants, mainly Zulus, are largely engaged in cattle-raising but cultivate the soil to some extent, raising maize, millet, sweet potatoes, tobacco and beans. There are large sugar plantations which have been developed by the whites who also raise tea and coffee in the coast region. Anthracite has been mined but mineral resources have not been developed. In respect to provincial matters Zululand is governed by the provincial council of Natal, and otherwise by the parliament of the Union of South Africa, being represented in the lower house. British policy has tended to entrust the natives with the administration of their own affairs so far as possible.

ZUYDER ZEE, DRAINAGE. After several years' consideration of the project, a bill for the drainage of the Zuyder Zee was passed in June, 1918. The time required for the completion of the work was estimated at thirty-three years, and the cost at 189,000,000 florins, exclusive of interest. The plan contemplated the dyking in of four distinct areas as follows: (1) The island of Wieringen; (2) a tract lying to the south of the town of Hoorn; (3) one extending along the coast of Gelderland near the river Eem; (4) one on the south coast of Friesland. The total acreage of these four areas was placed at 521,170. Nine years according to the estimates would be required for the construction of a great embankment or dam which would extend to the village of Plaam on the west coast of Friesland from a point near the northeastern angle of the province of North Holland; total length 29,300 metres at a height above Amsterdam water level of 5.40 metres. Upon the reclamation of these

four areas a fresh-water lake which will be formed near the centre will serve as a water supply for the surrounding region and at the same time facilitate drainage. A great improvement in production was predicted from the cultivation of hundreds of thousands of acres of redeemed land. In 1920 a commission was investigating the economic problems involved in the execution of the plan, especially the compensation of the Zuyder Zee fishermen and those engaged in industries depending upon the fisheries, for their occupation would be destroyed. Those directly engaged in fishing numbered only 3017 but the total number of persons affected was placed at 500,000. The value of the annual catch in the Zuyder Zee has been placed at over 2,000,000 florins. A scheme for pensioning those who were thus deprived of their means of earning a living was proposed but the details had not been worked out at the close of the year.

1921
